Hi Gang,
i am looking for pictures and informations about the following receivers.
Could you please help me ?
My emailo : jmc@dproducts.be

HAGENUK DF-160 duplex filter, for 19" rack. German. Same as Drake DF-160
DEBEG 7220 empf�nger. German. Same as Drake RR-1 early version
DEBEG MSR-2 emf�nger. German. Same as Drake MSR-2
CRM 3702 recepteur, french text on front. Same as Drake RR-1 late version
CRM 3928 recepteur, french text on front. Same as Drake MSR-2
ELECTRONICS ASSISTANCE CORP. R8 receiver. Same as Drake RR-1 late version
ITT Mackay Marine 3022A receiver. Same as Drake RR-1 early version

Thank you, best regards to you and your family, 73

JM CHERRY

RR 2023 deals with the obligation of licensees to ensure secrecy
of communications......

Try again, mon ami. I do this for a living.

>If I say so it's because we have the same legal problem in France with
>the criminal code article R.226 (forbidding some equipments) and that
>legal argument has been studied by lawyers.

French law and legal processes are radically different from US
communications law. I for one know this because I was trained
as a regulatory legal and engineering specialist by someone who
was trained under the French Administration at a time when it
considered that the average citizen needed access to a radio
tramsnitter as much as to a machine gun <ggg>

In the US, one is required only to ensure that spurious signals
are not being transmitted, and there is no requirement that any
specific piece of equipment be on hand to ensure that. Indeed,
one can borrow equipment to do this, or can even rely on off-the-air
observation by a fellow ham or commercial engineering service.

>Making QRM with spurious is illegal, so you must have permanently (even
>in portable) an equipment to monitor that you didn't radiate spurious.
>The cheapest equipment to monitor spurious with frequency display, is a
>wideband RX, so its use is not illegal because nobody can obligate you
>to buy an EXPENSIVE portable spectrum analyzer.

Rest assured, though, that if one is found transmitting spurious signals, s/he will be cited for the violation regardless of access to a wideband receiver, a spectrum analyzer, the entire HP Laboratory, or none of the above.

Bottom line - the press has the means, opportunity, and
sometimes even the motive to make mincemeat out of the PDs or
anyone else who gets in their way and both sides know it.

Phil,

Remember (sure you do!) when we used to be required to have a way to monitor
our operating frequency WRT the band edges? There're STILL LM's coming out
of the woodwork at hamfests.

Not _required_ anymore - but we are sure still liable for violations.

BUSINESSES save $Thousands$ on long distance NOW!
WITH $HUNDREDS$ IN FREEBIES & DISCOUNTS
Check Out Our Outstanding Benefits (QUICKLY Read Below Now)

No. 1 YOUR Company will pay SIX CENTS per minute OR LESS on long distance.

No. 2 Your Company will have the ABSOLUTE LOWEST intrastate RATES in the country.

No. 3 Your Company will receive SIX second billing with NO rounding to the next minute.

No. 4 YOUR Company will NEVER RECEIVE monthly FEES or minimum usage charges.

No. 5 Your Company WILL Receive the same rates 24 HOURS a day seven days a week.(No Gimmicks)

No. 6 Your Company will dial 1 plus the number. You will never have to dial codes.

No. 7 Your Company WILL receive unlimited FREE CALLING CARDS with coding abilities for each employee. CALLING CARD rates will BLOW you a way.

No. 8 Your Company will receive AWESOME international rates with no additional monthly fees, and the ability to Negotiate YOUR PERSONALIZED rates for heavily used international exchanges.

No. 9 Your Company WILL receive a credit for any and all transfer fees.

No. 10 IF Your Company is not 100% satisfied with the ACTION you have taken we will gladly pay for all switchbacks.

DROP THE MOSE AND PICK UP THE PHONE NOW!! (415) 273-3955
****
To Finalize, or to have any questions answered CALL NOW (415) 273-3955

No. 10 Your Company will be able to offer this incredible SAVINGS as an EMPLOYEE BENEFIT.

No. 11 Your Company will ALWAYS be able to take advantage of ANY AND ALL PRICE Reductions in monthly services as they arrive.

No. 12 Your Company will receive Comprehensive Detailed Billing (CDB):
A. Billing provides EASY organization for immediate referencing of our PRICELESS tools.

B. Billing provides a summary of your most frequently CALLED phone numbers at a Glance, as well as a summary of your HIGHEST usage calls, allowing you DISCOVERY and identification of FRAUDULENT usage as well as assisting in client billing and management.

CALL NOW (415) 273-3955

Did you know that rates offered from major long distance carriers today alter their quoted rate within the 24 hour day, As much as 100 percent. Statements such as receive this low

rate everyday. However they don't mean 24 hours a day.

Did you know that if a long distance company charges based on one minute increments it will cost you over 30 percent more than if billing charges are at 6 second billing. ORDER NOW!

Did you know that extremely low rates offered by long distance carriers refused to mention or make readily available their monthly service fees? For example a five or four cents per minute offer with a $10 plus service fee can bring you're per minute cost way above 10 cents per minute. GO AHEAD & ORDER NOW!
(415) 273-3955
Did you know that extremely low rates offered by long distance carriers refused to reveal that their intrastate rate might be twice as high as their long distance rate. Capital four instance New Yorkers we have five cents a minute long distance. What they're not telling you is its 12 cents a minute to call from Brooklyn to the Bronx.

DROP THE MOSE AND PICK UP THE PHONE NOW!!
CALL NOW (415) 273-3955 (TURN ON your Outstanding Benefits TODAY)
DISCOVER that you will BRAG about our services.
CALL NOW (415) 273-3955

It's setup to operate out of the CB band and/or
with high power.

Of course all they'd need would be an ham radio instead of
CB. This sounds like the beginning of the war on hams. LEOs
think they own the road and will not differentiate

between CBers and hams.

Just when you think you've heard it all when it comes to the code debate, along comes a truly insane individual who throws out something even more absurd than you've ever heard before. This guy has to be insane - anyone else would have been too embarassed to post this nonsense.

Get real, Robert. Lets not put higher emphasis on Morse than it deserves. Morse, like vacuum tubes, was part of the "radio art" years ago. Now its just the hobby of a very small minority of the radio community.

A CB that can transmit more than 5 watts, or can transmit on any other
frequency (including those between the channels) than the allocated 40 channels,
or use methods other than CW, AM, or SSB. If you use a ham radio as a CB, then
it is considered an illegal CB as would a linear or modulator.

If you want a "lisence" learn how to spell it.
Why do you want to become a boring person?
Please visit my World Wide Web Site, you have never seen a page like it. You
will see:

1. Access to oldies mp3 (albeit on an irregular basis)
2. Really interesting answering machine messages
3. A blond naked chick with really big knockers
4. A guide to the best ham pages ever.
5. Hear Ted Kennedy really screw up in front of Clinton
6. Actually sounds of Bill Clinton "after the lov'in". 7. The writings of me
and others on ham radio, hear a typical ham contact. 8. The warm side of
K1OIK, hear me speak, see me with famous people. 9. An amazing card game
that will shock others
10. Pictures of me and my family.
11. Did common German's enable the holocaust?
12. See now the future of ham radio.
13. How to pass the A+ Certification

Burt Fisher

Hello and thanks for reading this POST.
I am in desperate need of the Schematic for either the TH-205A or the
TH-405A vintage Kenwood Handheld. I would settle for the schmatic to the
TSU-3 CTCSS encode/decode module.

Thanks in advance for your support.

73,
Frank K9IC

Using a ham radio as a CB is just as illegal, so there's no difference there. As far as cars with antennas, the antenna is dependent on the frequency used, not the type of radio, so they would still have to use a CB antenna, even with a ham radio. At any rate, they'd have a hard time justifying a stop based on the simple fact that you have an antenna on your car. Where's the probable cause?

As is often the case, if someone does something they don't like they
can always charge them with disturbing the peace. I think that's what
was used in this case, but unsuccessfully.

HAMFEST/COMPUTERFEST CALENDAR 2000 - ILLINOIS
last updated August 15, 2000 |

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, John Wass KA9QJX, Tom Harker, and ARRL for providing some of the information.

SEPTEMBER 2000

Sep 16 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Sep 16 & 17 (Sat & Sun): Peoria, IL - Peoria Area ARC. Info: Ron Morgan, KB9NW, or John Coker, N9FAM, both c/o: PO Box 3508, Peoria, IL 61612-3508. tel: (309)692-3378. Email kb9nw@juno.com or n9fam@juno.com. http://www.peoriasuperfest.com

Sep 17 (Sun): Orland Park, IL - Giant Computer Show & Sale (see below). Orland Park Civic Center, 147th St. & Lagrange Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Sep 23 & 24 (Sat & Sun): Grayslake, IL - Chicago FM Club Radio Expo. Lake County Fairgrounds. http://www.chicagofmclub.org. Admission $8, good both days. Info: Mike Brost, WA9FTS, 5127 North Monterey Avenue, Norridge, IL 60706. Tel: 708-457-0966, Email: mbrost@cin.net (the biggest and best hamfest in northern IL - AJ9S)

Sep 24 (Sun): Glen Ellyn, IL - Computer Central Show (see below). College of Dupage. Corner of Park Blvd. & College Rd. 9:30 AM - 3 PM. Admission $6, children $2.

OCTOBER 2000

Oct 1 (Sun): Wheaton, IL - Giant Computer Show & Sale (see below). DuPage County Fairgrounds, County Farm Rd. & Manchester Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Oct 8 (Sun): Cedarville, IL - Stephenson County Repeater | Association amateur radio and computer hamfest. Jane Addams |

Community Center 430 W. Washington St., Cedarville IL. |
8:00am-2:00pm. Admission $4.00. No advance ticket sales. |
Indoor table cost $9.00 for one, $5.00 per each additional. |
Tailgaters $4.00 same as admission, limited space available. |
Talk in 147.390. VE testing, times to be determined. For |
table reservations: coordinator Ruben Dowman KB9OLF (815) |
563-9020, email: drads115@aol.com or Mel Welch (815) |
563-4377 or Russ Love (815) 563-4921. |

Oct 14 (Sat): Grayslake, IL - Computer Country Expo (see
below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Bel-
videre Rd.) & Rt. 45. 4 miles west of I94. Admission $6,
or $5 with discount coupon available at WebSite.

Oct 15 (Sun): Orland Park, IL - Giant Computer Show & Sale
(see below). Orland Park Civic Center, 147th St. & Lagrange
Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Oct 22 (Sun): Glen Ellyn, IL - Computer Central Show (see
below). College of Dupage. Corner of Park Blvd. & College
Rd. 9:30 AM - 3 PM. Admission $6, children $2.

NOVEMBER 2000

Nov 5 (Sun): Davenport, IA - Davenport Radio Club. Iowa
National Guard Hanger, Mt. Joy Airport. Talk-in 146.88 MHz
repeater. http://www.gwltd.com/hamfest

Nov 11 (Sat): Wheaton, IL - Giant Computer Show & Sale (see
below). DuPage County Fairgrounds, County Farm Rd. & Man-
chester Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Nov 12 (Sun): Orland Park, IL - Giant Computer Show & Sale
(see below). Orland Park Civic Center, 147th St. & Lagrange
Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Nov 18 (Sat): Grayslake, IL - Computer Country Expo (see
below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Bel-
videre Rd.) & Rt. 45. 4 miles west of I94. Admission $6,
or $5 with discount coupon available at WebSite.

Nov 18, 19 (Sat, Sun): Ft. Wayne, IN Fort Wayne Hamfest &
Computer Expo. Allen County Amateur Radio Technical
Society. 2000 Indiana ARRL State Convention. Allen County
War Memorial Coliseum Exposition Center. Hours 9 AM - 4 PM
EST Sat, 9 AM - 3 PM EST Sun. Admission $5 plus $2 parking.
http://www.acarts.com

Nov 26 (Sun): Glen Ellyn, IL - Computer Central Show (see
below). College of Dupage. Corner of Park Blvd. & College
Rd. 9:30 AM - 3 PM. Admission $6, children $2.

DECEMBER 2000

Dec 3 (Sun): Wheaton, IL - Giant Computer Show & Sale (see below). DuPage County Fairgrounds, County Farm Rd. & Manchester Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Dec 16 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Dec 17 (Sun): Orland Park, IL - Giant Computer Show & Sale (see below). Orland Park Civic Center, 147th St. & Lagrange Rd. 9:30 AM - 3 PM. Adults $6, children $2.

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are held by Micro Media, Inc. Shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123. See http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer expo. The event is held on designated Saturdays from 9:30 AM to 3:00 PM. This show features computers, supplies, games, parts, software, accessories, CD-ROM, monitors, diskettes, printers, keyboards, modems, disk drives, cables, expansion boards, services, etc. Lake County Fairgrounds, Route 120 (Belvidere Rd.) & Route 45, in Main Exhibit Hall Building #1=9720,000 sq. feet. For a show map, exhibitor info, and discount coupon, visit the web site at http://www.ccxpo.com.

Now this IS interesting. I just couldn't wait to see how to become more 'interesting'! I checked out the web page - gee, I wonder why the site is down to inform Mr. Fisher what we thought of his page. Not bad, really, but as far as becomming 'interesting', I find some of his points fascinating. Particularly points #1 (hmm.. MP3s on an irregular basis), #3 (I didn't bother), and #6. Interesting, indeed! I tried the test and failed, miserable. Didn't get any answers right. Oh well, I tried. I found the newspaper article quite interesting. I WILL agree - somewhat - on the point made as far as community service. Seldom are amateurs needed anymore. The problem is, when they ARE needed, they are needed - and usually not in a minor way. Do you remember the BIG ice storm in the New England area a couple of years back? Gouverneur was without power for many days. One of the areas' police lost their tower - and was put up on an AMATEUR site to maintain police communications. Cell phones are indeed great - until you loose power over a LARGE area. Then even the cell phones die.

That said, I would tend to disagree with Mr. Fisher. Hams are needed, if only to interest youngsters in technical issues. This country has taken a course where everyone wants to make $10,000 a day - everyone wants to get involved with Wall Street, or start an internet scam. This country will not continue to prosper when our universities are training more and more foreign students and fewer Americans (well, perhaps our business schools are doing just fine, I don't know). No one seems interested in physics, chemistry, etc. Too hard. Take business courses. You'll make more money than an engineer!

As far as how difficult the tests are, I am curious if amateur radio is supposed to attract people, or if the purpose is you must obtain a PhD in order to get the ticket - then just yak away?

As to me, I enjoy 440 FM. There is one repeater where most of us know everyone else. It is just a little relaxation to have a pleasant chat with someone you know - and not tie up the phone line. Nothing wrong with that. We also usually get involved in foot races in the fall, with a bunch of the hams providing the communications. Sure, there are older hams - and a bunch of younger ones also. Certainly, though, I believe we must interest people (especially youngsters) in technical issues and NOT just 'see the picture of the naked blonde with big boobs' or a bunch of MP3 files (and, by the way, I do not consider that culture).

Jim AA2QA, PG-GB-05180, CET, ooops ... didn't renew my telegraph ticket (no use for it).

Air Force 'hams' invited to anniversary party
Released: 1 Sep 2000

WASHINGTON (AFPN) -- Amateur radio operators, or "hams," from around the globe will celebrate the 53rd anniversary of the Air Force with a worldwide radio "QSO party" on Sept. 16. The party is set for 12:01 a.m. Sept. 16 to 11:59 p.m. Sept. 17 Universal Coordinated Time. QSO is ham radio shorthand for "radio contact."
Hams are licensed by their governments to develop radio skills, improve radio science, provide disaster and public service communications, and build international goodwill. The U.S. Federal Communications Commission has issued such licenses to more than 700,000 people. Hundreds of thousands of citizens of other nations are similarly licensed by their governments.

The QSO party was started in 1997 as a one-time celebration of the Air Force 50th anniversary, but has become an annual event at the request of hundreds of its participants from around the world, including many Air Force members and retirees. Through it, hams gather on the airwaves to renew old Air Force acquaintances as they exchange radio greetings.

The event is sponsored by the Air Force Directorate of Communications and Information, and managed by the Razorback Radio Club. Its trustee, Brig. Gen. Bernie Skoch (amateur radio call sign K5XS), is the principal director for network services at the Defense Information systems Agency in Arlington, Virginia.

Hams have a historical practice of using the Morse code to communicate. They couple this practice with modern communication techniques such as voice communications, radio teletype, television, facsimile, and even computer-to-computer communications over radio. Space shuttle astronauts communicate with classrooms worldwide via ham radios to educate elementary and high school students on space travel. The new International Space Station will include a ham radio station as well.

For more details, e-mail Skoch at k5xs (at) Compuserve.com, write the club at 1033 Marlboro Road, Lothian, MD 20711.

A typical response by your typical ham radio
operators! Throw rocks when someone who is looking for
a reasonable deal posts something, if only because they
want/wich they could find such a deal.
If it ain't nailed down they pocket it. If it's for sale, they get to the
hamfest at 5:00 AM to be first in lind for dibs at an item, then turn around
and put it on their table for sale an hour later (after they pull the
accessories out of it) for double the price. What a bunch of F-N lowlifes.

36. Recruiting new ham radio operators

Newsgroup: rec.radio.amateur.misc
Date: 2000-09-02 00:04:31 UTC
From: jason_hsu@my-deja.com
Message-ID: <8opg64tab1@nnrp1.deja.com>
Source record: 104051
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Has anyone here had or seen a successful ham radio recruiting campaign? If so, I want to hear the juicy details. What worked? Flyers at community centers/college campuses? Advertising in a local community publication? One-on-one with friends and relatives? And what convinced the recruits to become ham radio operators? The National Traffic System? Emergency communications? The general fun and magic of it all? Contests?

As we all know, nobody has been marketing ham radio. Ham radio has a SCREAMING need for marketing and recruitment. To give you some idea of what I am talking about, read what I have written below.

Ham radio was INVISIBLE to me for most of my life. I only remember a vague reference to ham radio during a news report on Hurricane Gilbert in 1988. I NEVER thought I would be one day operating ham radio - I assumed that it required resources and technical knowledge that were well beyond my reach. Although I graduated from the University of Illinois at Urbana-Champaign with a Bachelor's Degree in electrical engineering, amateur radio still didn't reach my radar screen. In retrospect, I am surprised that SYNTON (the university ham radio club) wasn't pulling out all stops to recruit electrical engineering students, who would be the perfectly logical candidates for the hobby.

I discovered ham radio because I am a weather weenie. I read about tornadoes through the storm chasing web sites during my senior year of college. I read about what spotters do, and I wanted to be a spotter. I read that spotters use ham radio to communicate, and I later took action to become a spotter and ham radio operator. I have been a ham radio operator and storm spotter since early 1997.

37. Promoting SKYWARN on the Weather Channel

Newsgroup: rec.radio.amateur.misc
Date: 2000-09-02 00:13:33 UTC
From: jason_hsu@my-deja.com
Message-ID: <8opgn0tug1@nnrp1.deja.com>
Source record: 104037
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Perhaps I am biased because my weather weeniness led me towards ham radio, but I believe that weather weenies represent a promising pool of new ham radio operators.

Little attention is paid to SKYWARN storm spotters. If you poll 100 random people on the street, you'll be lucky to find 5 who know what SKYWARN is.

The Weather Channel seems to be the perfect place to raise SKYWARN's visibility and recruit SKYWARN members. Weather weenies watch the Weather Channel to hear more than the local forecast. These people represent potential SKYWARN spotters, and SKYWARN spotters are quite likely to enter ham radio.

I have two proposals:
1. A Weather Channel documentary on SKYWARN and how to join.
2. SKYWARN commercials on the Weather Channel sponsored by the ARRL, SKYWARN, RACES, ARES, ham radio equipment manufacturers (who have a monetary interest), and ham radio dealers (ditto).

As a retired police officer I resent your
"they are not your friends"
comments on the usegroup .
The only people who were not my friends were
those who had reason to fear arrest by the police.
What do you have to fear?

K1zw
Larry
SOC #386
Qcwa
==========
And my response to Larry:

Hello Larry:

You said
As a retired police officer I resent your
... comments on the usegroup .

I reply - as a citizen I don't care if you resent
my comments regarding the true nature of the police.

You and I have a different definition of a "friend".
You said
"The only people who were not my friends were
those who had reason to fear arrest by the police. "

The answer is simple.
A friend is not and does not act as an agent for the state.
A friend does not have the power to cause me harm.
A friend does not question me with the authority of the state.

" What do you have to fear?"
I have everything to fear from individuals who are cloaked
in the authority of the state. Individuals have been harmed
by "bad cops". Since I do not know which cop is good and
which cop is bad - every cop has the potential ability to
cause me harm.

If I am talking to a cop when that cop is acting as an agent for
the state, I have absolutely nothing to gain by that conversation.
Will anything good come from the conversation? No.
At best - the conversation will end and I will be no better off
then the point in time before the conversation began.
Could something bad come from the conversation? Yes.

Just what possible gain can I, as an individual, achieve from
a conversation with a cop who is acting in an official of the state?
Come on Larry - Answer.

Best regards
Gil Jones

41. Celebrity endorsements of ham radio

Newsgroup: rec.radio.amateur.misc
Date: 2000-09-02 00:47:10 UTC
From: jason_hsu@my-deja.com
Message-ID: <8opima$vu0$1@nnrp1.deja.com>
Source record: 104039
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

I have seen the lists of celebrity ham radio operators. I'm surprised these celebrities haven't been heavily promoting our hobby. Of course, these celebrities aren't usually the most well known celebrities. I haven't read much about Walter Kronkite lately. Patty Loveless isn't on my radar screen, as I am not a country music fan. These celebrity lists don't include Britney Spears, Michael Jordan, Sandra Bullock, Gillian Anderson, Elton John, Billy Joel, Mariah Carey, Diana Ross, or the most visible celebrities.

I realize that recruiting nonham celebrities into ham radio is a long shot. The celebrities are buried in messages from fans and have very busy schedules. However, the potential payoff is so large that I will experiment with this. If a major celebrity becomes a ham operator and discusses ham radio in an interview, this will attract the attention of the fans. This will arouse the curiosity of some of the fans, and a significant percentage will enter the hobby. Most fans won't enter the hobby, but even if a few percent of the fans become ham radio operators, this will have a significant impact on our numbers. If 10 million Americans hear that Drew Barrymore is a ham radio operator and just 1% of them become ham operators, that will increase our numbers here in the USA by 100 thousand, or about 10% (assuming there are 1 million of us). Furthermore, these new hams will likely spread the word to their nonham friends.

Some ideas I have:
1. One idea I am beginning to try is sending messages to celebrities through the National Traffic System. Unfortunately, this usually requires knowing the celebrity's address or telephone number. But maybe, just maybe, a ham in the area knows how to contact the celebrity.
2. Another idea I have is to convince the hams in the celebrity's home town to try to recruit the celebrity and elmer him/her.
3. Perhaps a better way to reach celebrities is to convince the hams in the celebrity's home town to heavily promote ham radio. The more new hams there are in the celebrity's home town, the better the chances that the celebrity will find out about ham radio, and the better the chances he/she will enter ham radio.

Has anyone tried recruiting celebrity ham operators?

Some celebrities I would like to see in ham radio include:
1. Britney Spears: CQ baby one more time! She'll break down ham radio's image as an outdated old boys' club. Millions of teenagers and children will be introduced to the joys of ham radio. Even if only a few percent of Britney Spears fans become ham operators, this

guarantees there will be a population explosion of ham operators.
2. Christina Aguilera: Ditto. Ham radio is a genie in a bottle, and she'll be able to rub it the right way.
3. Pierce Brosnan: Ham radio would be cast in a completely new light if the man behind James Bond became a ham operator. Ham radio will be as exciting and cutting edge as Q's nifty gadgets. Will Bond like his radio waves shaken and not stirred?
4. Michael Jordan: Think of Air Jordan antennas.
5. Gloria Estefan: Gloria Estefan has a very diverse group of fans by age, gender, and ethnicity. She would be especially adept in bringing Latinos into ham radio. Come on, shake your body, talk on the airwaves . . . . .
6. Michelle Kwan: Ditto. She would be especially adept in bringing young people, figure skating fans, and those of Asian descent into ham radio.

Due you have a need for an SMA-TO-BNC antenna adapter that is custom
made to fit and protect your H.T. or scanner radio?

Adapter allows you to:
Quickly change antennas to base,mobile or different style use.
Use the more popular and wider selection available of BNC antennas.
Prevent chassis connection wear or from coming loose due to always
having to change antennas.

Adapter features:
Gold contacts with a teflon insulation.
A low profile design with a rubber covering for a factory antenna look.
The rubber base seals to the top of the radio with no spacers needed
for moisture and dirt protection.
The base provides an excellent support for any length of antenna or
application.
No need to remove once installed to make any antenna changes.

Sizes to fit radio models:
Yaesu: VX-5, VX-1, VX-10, FT-50-R
Icom: IC-R2, IC-T8A, IC-T81A, IC-Q7A
Kenwood: TH-D7, TH-G71
Alinco: DJ-V5
Standard: C508A, C510A
Radio Shack: HTX-200, HTX-400, HTX-245
Aor: AR-16

Previewed in the May 2000 Issue of CQ Magazine.

>6. Michelle Kwan

None of the above are on MY "radar screen".

I didn't get into ham radio (50 years ago) because some celebrity
was a ham. I got into ham radio because I wanted the privilege
of being allowed to transmit with a radio and talk to other hams.

Let's bring THAT concept into the 21st Century (if at all poszsible).

Number stations in the US do the same thing that number stations do
elsewhere...code for "spooks" or spook wannabees. I imagine there are
groups out there that have both the technology and desire to communicate
in "code" thus the broadcasts you've been listening to.

They may get the liberals thinking again. :-)

"every moving thing that liveth shall be meat for you" GENESIS 9:3

A strong body makes the mind strong. As to the species of exercises, I advise the gun. While this gives moderate exercise to the body, it gives boldness, enterprise and independance to the mind. Games played with the bal, and others of that nature, are too violent for the body and stamp no character on the mind. Let your gun, therefore, be the constant companion of your walks.
THOMAS JEFFERSON

Firearms stand next in importance to the Constitution itself. They are the American people's liberty teeth and keystone under independance.....From the hour the pilgrims landed, to the present day events, occurances and tendancies prove that to insure peace, security, and happiness, the rifle and pistol are equally indispensable.... The very atmosphere of firearms everywhere restrains evil interference - they deserve a place of honor with all that's good.
GEORGE WASHINGTON

Your life starts at point A and ends at point B.

True, but think of how much visibility a major celebrity of the day
would bring. Just ask AT&T about Paul Reiser and MCI about Michael
Jordan and his Spacejam buddies.

Posted by Alfred the Ignorant American Notes for a portrait on August 31, 19100 at 23:49:12:

In Reply to: Re: Ignorance in America posted by Kevin Alfred Strom on August 28, 19100 at 12:56:54:

Dear Alfred, As I noted in a following msg. to my original I asked to be forgiven my poor typing skills leading as they do to mispellings etc.-I usually just dash thsese missives off especially when I am addressing ignorant brownshirts-I was mistaken in believing that it wouldn't matter-apparently you can parse and spell which is an accomplishment for someone who equates the following statements expressed on 3950 as examples of "truth" and developed intellect. Examople 1. "The Red Chinssse (as w1wcr pronounces it) will/might pour 10 million soldiers into Africa. 2."The Red Chinsssse have 700,000 soldiers in Africa but the "left wing" press is burying the info. I would be very interested in knowing how China could whip 10 million men into Africa-do you suppose they will fly them in in Boeing 747s?? And how long would that take anyway. No doubt the "Clintonistas" will supply the planes and the press will cover it up all in an attmpt to subvert America with the result that ignorant white trash with personality disorders will lose more of their perceived position of superiority as "real Americans" over ethnic "non-Americans"-this is after all what is happening isn't it. Its all a conspiracy to dispossess "real patriotic Americans" (read white racist Americans). I mean how to explain why you are doing so badly in life's game-it can't be that your an ignoramus and never made a success of things by your own wits-no it has got to be those dam niggers/jews/lawyers/commies/left wing press/liberals/unwed mothers/red chinese etc ad nauseum-how else to explain why you get up every morning to find out you are a loser and that YOU are not rich, famous, admired, loved and the president of the U.S.A. Next the black helicoptrs are going to swoop in with UN tropps and send you off to concentration camps right? I mean this is true-someone has actually seen preparations for this happening in U.S. military bases as stated more then once on 3950 along with the retailing of other ridiculous fairy tales and non truths. ("If I hadn't seen it in my own mind I would never have believed it" kinda thing right) Is this the "truth" and intelect you mean and admire when citing the level of discourse on 3950-yes it is as far as your little atrophied hate riddled non-intelect can conceive. You can conceive no other as you are an "American Ignorant". You are so full of disillusionment that you are prepared to get behind anything, any statement as long as it is disparaging-no matter that it is so ridiculous and that its proponents such unsophisticates that they do not know that the world is round. You choose to make that your arena as it is the only place where you might moderately shine-among the ignorants. In the real world you are an accomplishised crank and loser, a patent ignoramus as indicated by your fringe "belief" system and inability to deal with my orignal supositions. Rather then address them you chose to concern yourself with misspellings etc. You don't have the gray matter

to deal or comprehend the meaning. This is typical. You are a real intellectual giant Alfred. It makes me happy to realize that you will always be in a very small ridculous minority-you make for good sport as there is nothing so nice as sticking a pin into a fascist pin head. You state in your 'rebuttal' (good god) that I present myself as an "expert". When an ignoramus talks like a cretin and quacks like moron one doesn't need to be an expert to know that is it is a moron. Now you go home and straighten up your little collection of nazi militaria and dream your little dreams of greatness Alfred.

jason_hsu,
Did you ever think that if someone wanted to know more,
or to 'get into' the hobby, that they would? If someone has
to be induced in to this hobby by a celebrity, I'm not real
sure I'd want them here. Have you ever seen a 'groupy' you'd
want in this hobby? I haven't.
'Doc

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K2KW, N2VW, WB2YQH/WB2RAJ & THE 59(9) DX Report, W3UR & The Daily DX, K4VUD, W5BOS, WP4Q, N6RT, AC7DX, K7BV, K8YSE, 9M2TO, BA1DU, CO2QQ, DF3CB, DJ2MX, DJ5AV & DX News Letter, DJ7UC, DL4MCF, DL5ME, EA4DX, EA5EYJ, EA5RM, EA5XX, G0IAS, GW0VSW, JA1ELY, OH1EH, PA1AW, PA3BIZ, PY2HN, RA0FF, SQ6ELF, SQ8BGJ, SV1IW and VK4FW for the following DX information.

EDITOR'S SPECIAL NOTE (by KB8NW): Well, I am back from Las Vegas (pockets empty) and fighting some kind of illness (flu) along with attending a weekend "Teamster Seminar" which made it a little difficult to write this week's OPDX. However, I did the best I could. I want to thank the many who continued to send information (you would not believe the amount of E-mail I received....WOW!). It was hard to read/sort/delete the information collected. Hopefully, things can get back to normal next weekend......73

3B8, MAURITIUS. Look for DL7DF and DL7BO to be active from November 3-17th. No callsigns were mentioned, but they will operate from 3B8 with one station, a beam and a vertical for 80 and 160m. QSL via the German QSL bureau DARC to DL7DF or direct to: Sigi Presch, DL7DF, Wilhelmsmuehlenweg 123, D-12621 Berlin, Germany.

4W. EAST TIMOR. "The Daily DX" reported last Friday that Peter, ON6TT, will be active mainly during his evenings for the next few days as 4W/ON6TT. (He may be on for the whole day on Sunday.) Peter only operates SSB. QSL via ON5NT.

4W, EAST TIMOR. The 4W/K7BV East Timor DXpedition website has been updated with additional information. The website can be view at: http://www.qth.com/k7bv/timor/

5B4, CYPRUS. Look for Dez, 5B4/G0DEZ, to be active until 2003. He seems to like 17 meters CW/SSB. Check between 1830 and 0300z (sometimes as early as 1430z). He is hoping to obtain a 5B4 and ZC4 callsign. QSL via G0DEZ.

5V7, TOGO. A German team consisting of DJ7UC, DL4WK, DL7BO, DL7DF and DL7UFR will be here October 3-9th before heading to Burkina Faso (see XT2 below). Activity will be on all HF bands plus 6 meters CW/SSB/RTTY with an emphasis on the low bands. Their equipment consists of 4 transceivers, 2 linear amplifiers, 2 beams, a vertical, a 21m high vertical for 160 and 80m and a 5 element beam for 6m. QSL via DL7DF. For more details and updated information, visit their Web page at: http://www.qsl.net/DL7DF/

7Q, MALAWI. Allan, G0IAS, informs OPDX that Les/7Q7LA will be teaming up with Harry/7Q7HB. Harry at the moment is sending the first ever SSTV pictures out of Malawi from the "Club Makakola" on the South West shore of the lake. There is a possibility of a "get together" of ALL the hams currently operating from Malawi (7Q7DC, 7Q7JL, 7Q7BW, 7Q7BX and perhaps 7Q7RM.... if he is up to it) because they are all heading to the lakeshore. More details are supposed to be forthcoming.

8Q, MALDIVES. Roberto, EA4DX, informs OPDX that after two years of touring the Pacific (3D2DX 1998 and T24DX 1999), he will return to the Maldives were he operated in 1997 as 8Q7XX. He will use the same callsign, but his main targets for this operation will be the U.S. on the higher bands and EU and JA on the lower bands where 8Q7 is most needed. This trip is entirely devoted to radio, he states, so although his operation will be focused on the above, other continents and bands will not be unattended. Look for 8Q7XX between August 31st and September 11th on all bands 80-10 meters including the WARCs on the usual SSB DX frequencies. Equipment includes Yagis for 10-12-15-17-20 meters and a vertical for 40-80 meters, plus 1 kw linear. QSL via EA4DX (Callbook, QRZ or HAMCALL addresses OK). Log search on the Web after the trip at: http://www.qsl.net/ea4dx

9A & T9, CROATIA AND BOSNIA-HERZEGOVINA (IOTAs to be activated too!). Mario, DJ2MX, informed OPDX that he will be on holiday in Bosnia and Croatia. He will be active as T94DX between September 3-13th from Sarajevo on 80-10 meters CW/SSB/RTTY. After that he will go to Croatia and be active as 9A/N0MX from Brac Island (EU-016, CI-010) on 80-10 meters CW/SSB between September 14-28th. He has also planned to be active (if possible, only for a few hours) from some another islands (Solta Island EU-016 CI-126; Ciovo Island CI-013 NOT IOTA). PLEAE NOTE: QSL cards are only via his German callsign DJ2MX, through the DARC Bureau or direct to: Mario Lovric, Am Oelberg 11, D-61231 Bad Nauheim, Germany. Bureau QSL request is also available on his home Web page at: http://www.qsl.net/dj2mx

9H, MALTA. Once more a large group of Dutch amateurs will be leaving for Malta Island (IOTA EU-023) in order to have their holiday combined with a radio DXpedition. They managed to get the callsign 9H0VRZ for the three weeks of operation together with all their induvidial 9H3 callsigns. The first group will arrive on September 15th to build up the site. Their operations will start on September 16th and last until October 8th. The QSL Manager for 9H0VRZ is: Andre van den Bos, PA0JR, Olof Palmelaan 5, 9649 BH MUNTENDAM., The Netherlands. QSLs for all indivdual 9H3 callsigns are via CBA or QSL bureau. The team will be active on 80-6 meters CW/SSB, and in case of good propagation also 2 mtr. They will try to arrange a daily updated online log on their home page at: http://www.vrza.org

The home page will have further information on the starting date.
E-mails during the operation can be sent to: 9H0VRZ@vrza.org
Or from now until Septrmber 14th to: PA3BIZ@vrza.org
Participants will be as follows:
Frits PA0BEA 9H3IE (SSB/CW) Francis PA1FR 9H3AAH (CW)
Bill PA3BIZ 9H3ON (SSB/CW) Sietse PA1XA 9H3AAG (SSB/CW)
Ger PA0OI 9H3OI (CW) Jim PA2SWL 9H3SWL (SSB)
Sjirk PE1OFJ 9H3YM (SSB) Harry PA0QBS 9H3AAJ (SSB/CW)
Wilko PA3BWK 9H3R (CW) Jan PA0LD 9H3AAI (SSB/CW)
Andre PA3HGP 9H3S (SSB/CW) Louis PA0LRK 9H3LRK (SSB)
Renee PE1CAJ 9H3V (SSB) Hans PA3FYG 9H3AAL (SSB/CW)
Maarten PE1MQI 9H3W (SSB) Allart PE1RVQ 9H3AAK (SSB)
Jaap PE1NGF 9H3X (SSB)

CE/CE0Z, CHILE AND JUAN FERNANDEZ. "The 59(9) DX Report" states that in mid-September, Rick, PY1VOY, will begin a 2 month job in Chile and hopes to be active. He will try to get to CE0Z on his days off for a 4 or 5 day operation at a time.

CN8, MOROCCO. The Bavarian Contest Club will be operating again as CN8WW from here in the upcoming CQ WW Contests. They will be a Multi/Multi team, so there is a very good chance to work CN on all bands from 160-10m, for which they kindly ask you to work them again even if you worked them in the past (Even if you have received your QSL card). There will be a new picture QSL card for the upcoming activities. Work them on 5 or 6 bands and receive a special QSL card to honor your high performance.
CQ WW Contest SSB (October 28-29, 2000):
QRG's (+/- QRM): 1840 / 3799 / 7099 / 14255 / 21355 / 28455 kHz

CQ WW Contest CW (November 25-26, 2000):
QRG's (+/- QRM): 1833 / 3503 / 7003 / 14033 / 21033 / 28033 kHz

Before and after the contest they will operate as 5C8M in CW, SSB, RTTY, on 6m and also on the WARC bands. More detailed information about their DXpedition can be found on their homepage at: http://www.dl6fbl.de/cn8ww/
QSL cards for CN8WW and 5C8M go via DL6FBL (bureau or direct):
Bernd Och, Christian-Wirth-Str. 18, D-36043 Fulda, Germany

DX HOLIDAY WEB SITE. Kenny, K2KW, informs OPDX that he has just launched a new Web site called "DX Holiday". The goal of this site is to share information on DX operating locations, and DXpedition "how-to" information. He hopes the readers find it helpful, and he especially hopes they will contribute to it! Check out: http://pages.prodigy.net/k2kw/qthlist/

HF, POLAND (Special Event). Now through November 6th, look for station HF6WR. The station is active to celebrate the 1000th anniversary of Wroclaw City in Poland. Activity will be on 80-10 meters, as well as 6/2 meters. Most of the activity seems to be on 15 meters between 1400 and 1930z. QSL via SP6ZDA, via bureau or direct address: Scouts Radio Club SP6ZDA, Box 41, 51-673 Wroclaw 9, Poland. A special diploma is available. For further information, check the Web page at:
http://www.wroclaw.tpsa.pl/user/sp6pwr

HQ, HONDURAS (Update, Please refer to OPDX.472 and OPDX.473). Julio, EA5XX, informed OPDX that the Honduras Authorities have confirmed that the Spain team will be active as HQ0R from September 17-25th on all bands.

IOTA NEWS.....
AS-NEW. A group of hams from "The Beijing DX Club" will be active on Juhua Island, unnumbered IOTA China LIAONING PROVINCE WEST group. They will operate two stations with one beam and one power amplifier during September 1-4th. The callsign will be BI2J. The team consists of BA1AA, BA1DU, BA1FB, BA1HAM, BA1KA, BA1MK, BA1MT, BA1TU and others. The BI2J team is supported by Chinese Radio Sports Association and is sponsored by Island Radio Expedition Foundation Inc. QSL via W3HC. If there are any questions about the expedition, contact the team leader Alan, BA1DU, at: ba1du@arrl.net

AS-073. Tex, 9M2TO, will be active from Perhentian Island from August 31st through September 3rd as 9M2TO/P. Activity will be on normal DX frequencies 40-10 meters on CW. He will use an IC-736 with a G5RV and a 6m Yagi. QSL via the Bureau to JA0DMV or direct to 9M2TO.

EU-179. Tomek/SP8CTE, Wojtek/SP8NCF, Ryszard/SP8ONZ and Jakub/SQ8BGJ were active this past weekend from Uznam Island on all band SSB, CW and RTTY signing their callsign portable /1. QSL via their home call, bureau or direct.

NA-NEW. Lanny, W5BOS, will be on from Cay Sal Bank "The Bahamas" beginning October 6th or 7th for 2-3 days. This is the last unnumbered island group in "The Bahamas". The callsign will be W5BOS/C6A. QSL via W5BOS: Lanny Phillips, 8381 FM 2101, Quinlan, Tx 75474-4836 USA.

NA-093. Look for CO1OTA to be active September 1-3rd from the archipel-ago "Los Colorados" (Last time on the air was November 1995). Activity will be on the IOTA frequencies 80-10 meters CW/SSB. QSL via the GRUPO DX CUBA, Apdo. 1, Cdad. Habana 10100, Cuba or via Bureau.

J2, DJIBOUTI. "The 59(9) DX Report" reports that Houssein, J28FH, is a new operator in Djibouti. He is using a 10 meter only rig with a small amplifier (70w) to a mobile antenna 3 meters high. He is building a 3 element beam for the HF bands. OPDX has found that he frequents the frequency 28580 kHz after 1930z. QSL via WA2VUY.

LLDXL DXCC personnel at the "W9DXCC Bash"
in Chicago next month. He will advise us later. ADDED NOTE: Charly is still aiming at a A5 operation in early December 2000. He is looking for any experienced 160m Op for this operation. His E-mail address is: k4vud@hotmail.com

-=-
OPDX INTERNET SUBSCRIBE/UNSUBSCRIBE REQUEST: opdx-request@nshore.org
OPDX WORLD-WIDE WEB HOME PAGE (provided by John, K8

C, DL4WK, DL7BO, DL7DF and DL7UFR will be active
here October 10-15th. Activity will be on all HF bands plus 6 meters
CW/SSB/RTTY with an emphasis on the low bands. QSL via DL7DF. For more
details and updated information, visit their Web page (mentioned above).

XU, CAMBODIA. During the coming month of October, Toni/EA5RM and Pedro
Luis/EA7DBO will be active from Sihanouk Ville in the southern part of
Cambodia as XU7ADB. They plan to arrive in Phnom Pehn at 10:00 AM (local
time) on October 3rd. If the customs do not delay their plans, they will
be on the air that same evening and continue until the early hours of
October 11th. Operation will be on 80-10 meters SSB/RTTY, with some CW.
They also requested a licence for 6 meters band, but their request was
not accepted by the authorities. They will use an Icom IC-736 and a power
amplifier using a couple of 4CX250Bs to try to give readable signals in
Europe. The antennas will be a tribander beam for 10/15/20 meters and
wire dipoles for the others bands. An online log will be available on a
Web page during the operation (updated everyday). The Web is active now
with picture and info at: http://www.qsl.net/xu7abd
QSL is via EA4URE at: Union de Radioaficionados Espanoles, Apartado 220,
E-28080 Madrid, SPAIN

XW1UD DXCC STATUS (Also A5 info). Charly, K4VUD, reports that he finally
got a local Lao man to translate his XW1UD paperwork from Laos and will
present that in person to an ARRL DXCC personnel at the "W9DXCC Bash"
in Chicago next month. He will advise us later. ADDED NOTE: Charly is
still aiming at a A5 operation in early December 2000. He is looking for
any experienced 160m Op for this operation. His E-mail address is:

Just because it's there.
Like playing a guitar for personal enjoyment, flying aerobatics, building up
gear from scratch, or writting "useful" computer programs.

It's not something you do because you have to, but because you want to.
Once you truely learn it, CW becomes a language instead of work.
Unfortunately with the time I've spent on the air over the last 15 years it
is again a bit of work.

Morse code is a means of holding down the number of people involved in ham radio. Thats all it is. It keeps out the CB crowd, but its really a dumb, old fart concept.
If you want to limit the numbers of participants in this hobby, copy the methods used by law and medical schools.

Morse Code is just dumb.

Liar. You WERE investigated by the FBI, and they consider you to be a threat to the law-abiding public.
Why'd your ex-wife talk to the national news-investigation tv reporters about your unlawful activities?
Your goals of overthrowing the government and replacing them with a NAZI regime is well-known.
Another holocost under the name of 'saving the white race,' your motives are transparent.

> And when he resorts to such tactics, he is merely admitting that he

"Beautiful bride," hell she looks like 50 miles of BAD ROAD. She definately has the milage, Arschi.
You'd better make sure you have the Social security Office know of your blindness.
After sex, your wife asks, "Are you boys all on the same team?"
Your wife is so smelly, she uses Odor-Eaters for panty shields.

> This thread began with a mendacious and anonymous attack upon a

Which is illegal in itself as FCC regs specifically prohibit coded transmissions. I wonder (doubtful) if these stations are IDing? Spy transmissions seems unlikely on HF given the state-of-the-art in satellite commo technology, and even cel phones seems like a more secure method of transmitting code. Any chance of this being CW practice of some sort?

Any weenie represents a promising pool of hams.

Your celerbrity ideas yopped the weenie list.
Why would they want ANY association with this boring hobby?

Please visit my World Wide Web Site, you have never seen a page like it. You will see:

1. Access to oldies mp3 (albeit on an irregular basis)
2. Really interesting answering machine messages
3. A blond naked chick with really big knockers
4. A guide to the best ham pages ever.
5. Hear Ted Kennedy really screw up in front of Clinton
6. Actually sounds of Bill Clinton "after the lov'in". 7. The writings of me and others on ham radio, hear a typical ham contact. 8. The warm side of K1OIK, hear me speak, see me with famous people. 9. An amazing card game that will shock others
10. Pictures of me and my family.
11. Did common German's enable the holocaust?
12. See now the future of ham radio.
13. How to pass the A+ Certification

Burt Fisher
A Plus Certified Teacher of video, broadcasting and electronics
Net Plus Certified

Juicy, a term that relates to ham radio?

> As we all know, nobody has been marketing ham radio.

Marketing ham radio is like trying to sell sand to the Arabs, but the ARRL
does a lot of it.

Please visit my World Wide Web Site, you have never seen a page like it. You
will see:

1. Access to oldies mp3 (albeit on an irregular basis)
2. Really interesting answering machine messages
3. A blond naked chick with really big knockers
4. A guide to the best ham pages ever.
5. Hear Ted Kennedy really screw up in front of Clinton
6. Actually sounds of Bill Clinton "after the lov'in". 7. The writings of me
and others on ham radio, hear a typical ham contact. 8. The warm side of
K1OIK, hear me speak, see me with famous people. 9. An amazing card game
that will shock others
10. Pictures of me and my family.
11. Did common German's enable the holocaust?
12. See now the future of ham radio.

70. Promoting Ham Radio

Newsgroup: rec.radio.amateur.misc
Date: 2000-09-02 12:50:32 UTC
From: sbcmusic@aol.com

Just a few thoughts of ways to promote Ham Radio.

You can't beat good media coverage, at least in my experience. A good idea might be to call your local newspaper, radio and/or tv stations, and explain to them a little about your club, or the hobby, and say something like "This might be an interesting story for your audience, perhaps you'd like consider a feature story".....and, it does work.....our club can tell you from experience. ;)))

Also, as far as the media.....has there been a recent major weather event or some other type of disaster that your club or you yourself has been involved in? While not feature story material, usually, it's certainly newsworthy.....again, a simple call to the media can yield much.

Do you have someone in your club who has a gift for public speaking? Perhaps a teacher, Pastor, toastmaster, or whatever? A great place for exposure is the local service and civic groups.....such as the Lions, Elks, AmVets, Rotary Club, Kiwanis, and so on. These groups are often looking for programs for their monthly meetings. Get a couple of folks from you club, and approach these clubs.....have a good speech prepared, be prepared to answer questions, and have some sort of demonstration. In my experience, since we live in a graphically oriented society, something graphic seems to work best, like ATV or APRS or SSTV.....but that's not ALWAYS the case. And, since these groups are service oriented, it's good to hit the service end of ham radio.....skywarn, etc etc...

Another good place for demos is county and state fairs, and festivals.....often, if you're promoting public service, you can get booth space for free.....and it's a good place to reach of then thousands of people in a short time.

Well, there's a few ideas. I've rambled on enough probably ;)))

But, yet, there are those who enjoy getting out in the woods, camping and living a few weekends a year the primitive way. Is it necessary? No, but to those that enjoy it, it's fun and a challenge.

Or how about those of us who do travel by Bicycle, even though there is a car in our driveway. Is it necessary to travel by bike? No, but it's a fun challenge.

I wonder if you speak to campers and bikers (and whatever other examples we might think of) in the same way you spoke to us. ;))

I'll be willing to wager money that you haven't taken a random poll, sampling people all across the nation, and the categorized them into "mature" and "immature" categories, and did so with this newsgroup, and actually found a 5X figure... in fact, i'll be willing to bet ANYTHING you just pulled that number out of your hat.

The number of people that you run into on a day to day basis, even if outnumber five times in the category of "immature" by the number of people in this newsgroup, only represents just that... the number you meet yourself on a day to day basis in your life, and isn't actually a good index for the way the "general populace" acts.

I'm sure the objective observer would find the same.

Oh boy, Eric Oyen began a campaign of slinging multi-syllable words to try to add punch to his erroneous logic, which I will deal with piecemeal as follows...

In article <39A18EBE.5297A163@home.com>,
Eric Oyen <n7zzt@home.com> wrote:
> Its a simple matter of math.
>
> In this news group is a representative sample of the entire ham community.

SQUAAAAK goes the buzzer. wrong.
this news group has SO few people posting to it that you couldn't POSSIBLY use it for a statistical analysis, as you say, of the comparison. There are around 600,000 hams in the US alone, according to the last issue of ARRL audio news, so EVEN IF 1,000 people posted to this newsgroup (which there are not nearly that many people), that would only be a crossection of (roughly) one sixth of one percent. In nobody's book does one sixth of one percent give you a good sampling. And you have to realize that LESS than that actually come into this one newsgroup. Not all hams even have access to the internet. At BEST, you could say you have a SMALL sampling of internet newsgroup-using hams, but not all hams. Just for grins, i'd be willing to bet that maybe 100 to 500 people visit this newsgroup on a daily basis (500 is probably optimistic). For 600,000 hams in this country, that would represent, at MOST, one-TWELTH of ONE PERCENT!!!!

> Given statistical analysis of the problem, the numbers suggest that
> the amount of rudeness, bad behavior and general immaturity
> is roughly 5 times that of the real world.

SQUAAAAAK goes the buzzer again.
You made an incorrect leap in the inductive process there. the "numbers" you refer to (which I already discredited), cannot be used so simply to ennumberate the level of "rudness, bad behavior and general immaturity" that you are referring to. What kind of a scale did you use? 1 to 10? or a boolean system of "yes or no"?

>
> Now, I've lived in various places in the US over the last 35 years
> (most of that time here in Arizona, and a few years back east.
>
> The only place I have found where people display more rudeness
> and general immaturity than here is in our nations capital. This is based
> on actual experience.

YOUR actual experience, of the few people YOU have run into.... which, is even LESS of a cross sampling of the US populace than that of the hams that visit this newsgroup. in order to accurately judge a person, you'd have to get to know him or her better and find out through a serious of test, or at least outright questions, where they stand, to determing if they were rude, etc.... which, for the most part, the most interaction a person has with another random person in passing in the course of a day's event, would be to say "how are you doing", to which they refer, "fine"... In no way is this a good "statistical analysis".

> I do not need credentials (as such) to formulate in "informed opinion"
> (unlike certain others around here <case in point: John mackey>).

there are no such credentials in judging morality.

> However, given some of my educational background
> (associates degree in Business Administration with a minor in
> Computer Information Systems), I can go by some basic
> principles of psychology (required course work for a degree BTW).
>
> 1. I have found a fair number of my "ham radio brethren" to be
> a. cliquish (almost to extremes)
> b. opinionated
> c. arrogant
> d. uncompromising
> e. immature
> f. (too many other small reasons to list)

One must ask, at this point, why you would cling to such "brethren" if that is your judgement of them.

> A lot of the older crowd of ham radio (elmers) seem a
> bit more patient, willing to listen, willing to teach, etc. its the
> age groups between 28 - 45 that seem to have the most troubles.

if you haven't noticed, it is the older crowd, on the whole, that is more set it thier ways such that they gripe and resist change more. This is actually 180 degrees out of phase with your hypothesis.

> Now, admittedly, there are a few nice folks in the bunch,

always are. i'd say more than a few.

> but its rather hard to find them among all the clatter and noise
> being made around here!

If a person doesn't like the television program, it is his or her perogative to grab the remote and change the channel.

I know several very nice hams in
> the Phoenix Area and I respect their opinions, even if they

> differ from mine. HOWEVER, I cannot condone the
> behavior of the examples in here.

several? out of how many people that live in the phoenix area? how many
MILLIONS?

>
> Granted, there are a few good hams even in this news group,

once again, more than a few, but okay...

> but they can't get a word in edgewise with the likes of
> John mackey, frg9600,

ignore john mackey. he is obviously a disturbed person (for you to
be referencing him to this degree, he really put a bug under your
sattle). by the way, john mackey is one person in the nation of about
240,000,000 people. talking to him, you have gotten a cross sampling of
.000000042 % of the population.

herbie and a number of others
> swamping all the bandwidth.

>
> If you have a problem with my opinion:

BING goes the "logic" buzzer! now you have gotten it!
youre OPINION, not STATISTICAL ANALYSIS.

oh well, life's tough
> all over. I've stated what I want to state and its time for me
> to shut up.

never EVER shut up. it's a free country, and a mixture of ideas and
OPINIONS is what made it great. keep doing so. just don't try to pass
off such as "fact" and "statistial analysis".

there are days of the week where the people I run into make me think the
entire human race sucks. the next day, I run into a set of people that
eludes me to think that we couldn't have been luckier to be matched up
with a better species.

now, imagine for one second, if it was only the former, or the latter,
set of people that you ran into? you would have a very wrong opinion of
what the entire race was like. and that is exactly what you have done in
this newsgroup.

fact is, it takes all kinds to make the world go around.

There
> are about 150-200 posts on the NG server at a given time.
>

well, that was within the range of my numbers... i said about 100 to
500, and 500 was being VERY optimisted. assume the number 35 (since that
is the "regular" number of users. given a ham population of 700,000 (i
don't think it's quite that high but i'll grant it), that gives you a
cross section of only .00005 %!

conclustion; eric owen's numbers are really skewed and NOT indicative of
the way things "really are".

The Ultra-right and Aryan Resistance guys have gotten rather
sophisticated and yes while cell phones could/would do the same thing,
it's common knowledge that these devices are insecure for these groups
and others. If communicating to one's partners that are incarcerated the
number station route is the method of choice. Prisoners are allowed
radios but not phones.

I just completed an overhaul of the Propagation Center at the HF
Radio Resource Center (SWLing and Ham Radio). If you have not
been by in a while, or never, please take a look at the resources
available - they are updated in real-time. Included are eAlerts.

http://www.hfradio.org/propagation.html

I hope this is useful to you.

90. Re: Recruiting new ham radio operators

Newsgroup: rec.radio.amateur.misc
Date: 2000-09-02 17:45:33 UTC
From: Kris <ww@c.com>
Message-ID: <11bs5.2347$%f1.82782@news1.news.adelphia.net>
Source record: 103941
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Though I'm not sure how valid my opinion on the subject might be, I'll add my two cents worth anyway. I think marketing would be a great way to get non-hams aware of the hobby, but for fostering and maintaining interest, one-on-one is best. All it takes is for a non-ham to hear about ham radio and think to themselves *Hm, my cousin in into that, maybe she could tell me more* and as long as said cousin (or friend, other relative, etc.) is willing to explain and help there's a new ham. Now I realize that not everyone has a family member or friend who is into ham radio, but if local clubs find some way to advertise to the public in general (flyers or such in a store window) then the potential ham has an easy way to reach a knowledgealbe resource. I personally got into ham radio because of a friend, and later, with my grandfather, got my license. Had advertising been my only information, I doubt I would have been interested, but marketing probably would have gotten rid of the 3 years between my initial interest and when I actually went for my exam.

If my input makes little or no sense, forgive me and if possible I will try to be more clear in the future. But regardless, I hope my opinion adds to the discussion.

It hasn'tworked that way here.
Our area has a lot of no-code techs and many of them have been on for quite
a while. They also attend the emergency services training and have been
quite an assett to the weather nets.

>
> Anyone with any intelligence can do 13 wpm, and most of the people

Intelligence has little to do with code copying ability.
There are several thresholds with speed.
5 WPM can be memorized, but 13 is fast enough that you have to hear word
sounds. 20 is at the point where the subconscious takes over.
Each speed involves a different mode of copy.
Believe me, my subconscious does a much better job of copy than my
conscious. <G> Besides, at that speed I don't have to write anything down.

> I've been talking to on 40 meters are new hams, and confound it,
> they send better than us older guys.

Keyboards and keyers aside, they have better nerves and coordination.
than the "older" folks.

>
I think one thing most CW detractors don't realize is that once past 20 WPM
copy becomes very easy. Far easier than the 5 WPM.

CW is just another mode of communication. No more. No less. Nor is it dumb.
Those kind of statements come from people who don't like it, or don't have
the ambition to take the time to learn it. Learning code does not involve

inteligence, but rather nothing more than repetition. Just plain old repetition. That means devoting time, regular time each day to learn it.

Using half an hour, or so, per day for a couple of weeks should put nearly any one over the hurtle. It takes something like 10 to 15 hours to master the 5 WPM. About another 20-30 to make 13 and maybe 30-60 more to make 20.

It seems rather silly to still be debating the code Vs no code as the rules have changed and no amount of debating is going to change it back.
I do think they should have kept the Extra speed at 20 as the license has only been a "presteige" license for years. We only gained a tiny bit of CW space, which is plenty.

If some one does not want to learn it, that's fine with me. However to call a mode of communication dumb, is...well....rather dumb. There are many modes of communication and no one is likely to be using them all.

It's sortta like RTTY. It's still used, even though there are faster and to me, better, modes. I still don't consider RTTY dumb.

> I think, here, we have the lowest common denominator dragging things
> down. They know nothing, they won't learn, and .... well I could say
> more.
>

It depends on what they have to learn to pass the written.
I don't think passing, or not passing the code test proves much, except determination. The written test is the "brain power" part.

No amount of testing is going to weed out the malcontents and troublemakers. Not unless they add a physic exam. <snicker>

At one time many of those were Extras.

I haven't been following the news much and, until this summer, had been off low bands for some time, so I don't know what percentage of which group comprise the troublemakers. I guess I'll have to put up someting to listen to the 80 meter band and see if the one group is still there. <:-))
Since the tests went to multiple choice it has been possible to memorize the pool, or at least a vast mojority of it. Actually it's pretty difficult not to memorize for most people. It *just* happens after you go through the practice exams five or ten times.

Yes. Much more than you do, I suspect. The amateur licence prohibits
the use of a cipher.

>1==> Nothing new about these stations that broadcast cipher groups.
>As most veteran SWLs can tell you, they have been operating for

The only numbers stations I know of are the illicit CIA/FSB/Mossad/MI6
(and other evil organisations) which broadcast instructions to their
spies.

Don't you believe it! The CIA/MI6/Mossad/Cuba and other assorted
spymasters broadcast on HF to their spies abroad, in morse, AM
and SSB. Known as numbers stations or illicit stations. I thought
someone posted to the effect that Amateurs were broadcasting these
numbers - as you say illegal.

Like you, I question why on earth they want to do this in this day
and age. Best answer I got was that the spies were in 'developing
countries' which didn't have satellite or Internet.

Are you sure about that? There are some scholars that have said that because of a screw-up 1500 or so years ago in calculating the actual birth date of Christ, the 20 century may have actually started in 1995.

Given a choice of buying a fully equipped Intel Celeron or Pentium
PC running 700 Mhz with a plethora of realtime internet accessories
and free net access - or - having to go out and learn an arcane mode
called "code", pay $1200 or more for a jap HF rig what's built like a $89.95
Circuit City Samsung VCR, string unsightly wires or towers on your
property....all to talk with a bunch of cheap old white men - what do YOU
THINK the average young person is going to pick from these Phil..?

21'st century ham radio?? Cut me a break, ham radio is still in the 1950's
when you get down to brass tacks and one has the courage to speak reality.

Let's see.... would I want to keep my DSL or have 75 Meters...? Baaa Ha Ha
HA hAWWWW!

If so, please take him aside and ask him why he's such a bitter little man.

Someone informed me about an e-mail list service he was running. I went to sign up for it, and I get this REAL demanding e-mail back from him wanting all kinds of personal info...threatening that I'd better not be one of those (evil) commercial businesses...and being very accusatory in spite of the fact I've done nothing but send an automated response to join his list! When I e-mail back that after that welcoming, I'm really not interested, he shoots back another e-mail that with an attitude like mine(?), he wouldn't want me on the list.

This guy HAS to be a packet sysop! ;-)

:>
:>Which is illegal in itself as FCC regs specifically prohibit coded transmissions. I
:>wonder (doubtful) if these stations are IDing? Spy transmissions seems unlikely on HF
:>given the state-of-the-art in satellite commo technology, and even cel phones seems
:>like a more secure method of transmitting code. Any chance of this being CW practice
:>of some sort?
:
:Don't you believe it! The CIA/MI6/Mossad/Cuba and other assorted
:spymasters broadcast on HF to their spies abroad, in morse, AM
:and SSB. Known as numbers stations or illicit stations. I thought
:someone posted to the effect that Amateurs were broadcasting these
:numbers - as you say illegal.
:
:Like you, I question why on earth they want to do this in this day
:and age. Best answer I got was that the spies were in 'developing
:countries' which didn't have satellite or Internet.

Satellite and the internet allows the tracing of who the message
is sent to. HF does not. The receiver is totally left out of the
picture. At best, the transmitter can be traced which is why these
folks go mobile with ham licenses.

:>>>
:>>>Why would they want to broadcast a bunch of numbers?
:>>
:>>Are you just being deliberately dense, or do you not understand
:>>ciphers?
:
:Yes. Much more than you do, I suspect. The amateur licence prohibits
:the use of a cipher.

The license forbids jamming but hams have done it.

What it looks like is that foreign nationals or those loyalities
to other countries are getting ham licenses as a cover. Then
broadcasting number messages to whomever.

I do not think the right wing is this smart. But even then this is
a bunch of hams guessing as to why we are seeing (hearing
actually) so many number stations on the toll road east of Chicago.

:>1==> Nothing new about these stations that broadcast cipher groups.
:>As most veteran SWLs can tell you, they have been operating for
:>decades.
:
:The only numbers stations I know of are the illicit CIA/FSB/Mossad/MI6
:(and other evil organisations) which broadcast instructions to their
:spies.
:
:>>>>What is an outlaw CB? Since they dropped the Licensing requirements a bunch
:>>>>of years ago..
:>>>
:>>>Something about legal frequencies and power, perhaps.....?
:>
:>3==> Licensing requirements dropped for both HF and UHF citizens band
:>services some years ago in Australia, but users still have to use a
:>set that meets adequate technical specs, sticks to original frequency
:>allocations and power levels.
:
:Eggsackly. Mind you, all CB-ers are illegal IMHO!

What scares me is that radio is becoming like guns. Something
that is being used for illegal purposes. And that could be scanners,
```

CB, ham radio, even FRS. The drug runners are using scanners and CBs. Spies may be using ham radio. And then there are the militia movements.

Why can't people just behave!!!

The references I have indicated are the PERFECT ONES for the legal
problem for a ham to own a wideband receiver and using it as a spectrum
analyzer (with the SCOPE function) to avoid to radiate/control spurious
(as it is legally required).
The ONLY problem is to KNOW how to read/use them and it seems that you
are not a specialist to do that ... :-)
Unfortunately I have no time to waste to learn you how to use these
radiocommunications rules in a court of justice. Pay some US lawyers,
they will explain that to you ... An article have been written about
that some months ago in the french ham magazine MEGAHERTZ.

114. Re: N9VKS: Indiana ham arrested for having a scanner/the follow up

Newsgroup: rec.radio.amateur.misc
Date: 2000-09-02 23:18:49 UTC
From: 2121d@gte.net
Message-ID: <39b18858.36759323@news.gte.net>
Source record: 103963
Cross-posted to: rec.radio.amateur.misc,rec.radio.cb,rec.radio.scanner,rec.radio.shortwave,misc.survivalism

I contacted the Elkhart city clerk (the Bremen State Police Post
files all their traffic tickets into Elkhart). What happened was that
Josh Church had to go back to court a second time to show proof
of having a ham license. At that point all charges were dropped.
Case # 20H01-0005-CM-05634, Illegal possession of a police
radio-monitor-scanner, IC 35-44-3-12

As I expected, there was only one appellate case on this section
of law, and it only dealt with the possession of a radar detector
(radar detectors are not assumed to be police radios so case
dismissed). As of yet, no one has raised a case to a higher court
that would define the limits of the law.

What concerns me is that we are seeing an increase of people using
radios, as guns were used before, to commit crimes. Drug runners are
using scanners and CB radios in chase vehicles to let the mules avoid
the cops. So the cops are now stoping anything with an antenna on it.

And it looks like someone in the Chicago area is using their ham
license to cover a spying network. Too many in the Gary-South Bend
-Mishawaka-Elkhart area are hearing mobile ham stations trainsmitting
number type broadcast, in and around the ham bands.

Therefore the cops are looking hard at anyone with a radio. Even
hams. I do not like having to prove that I am a good guy. Even
volunteer fire fighters are now getting the "evil eye". In a society
where no one knows anyone else, everyone is looked at as dangerous.

Too many young cops (average cop only stays on the force for 5 years).
No connections to the community like the old timers had. Too gung ho.

And too many bad guys using my hobbies (guns and radios) to violate
our communites. Somehow we hams need to make our skills available
to the cops to help stop the crooks.

::snip
::
::If he was licensed and was arrested for a scanner violation then
::the only obvious thing that could be illegal is using the information
::obtained over the scanner for ones benefit or for an illegal activity.
:
:There is another possibility. There seems to be a growing number of
:stations that are transmitting "number messages" (string of numbers)
:in and around Chicago. You can hear them on 40 metres and 20 metres
:in the CW band. I passed a guy up on the Indiana Toll Way who

:overloaded my receiver with a CW number broadcast. He looked like he
:was from southern Europe and had ham plates on his car.
:
:If this is true, and you must know that there are a number of state
:troopers in intel units, then the cops may be looking at hams as a
:cover for spying and terrorism commo. Not a great future for us hams.
:
:Hello everyone, I just seen this post about this particular ham being
:arrested for having a police scanner in his automobile. Considering
:that I
:live in Indiana and go under the call of W9SUN which is my FCC
:assigned call
:sign for usage in the amateur service, I would like to make a few
:comments.
:I have read the law from the state of Indiana regarding possession of
:a
:scanner. It is not illegal for an amateur radio operator to possess a
:scanner in the state of Indiana and use it in a mobile setting. The
:key to
:this is that state law says that an amateur operator who has been
:granted a
:license from the Federal Communication Commission can possess one as
:long as
:they are a current FCC licensee. As for myself, I often carry a
:scanner with
:me whereever I go just for the hell of it. Anyone in Indiana can have
:a
:scanner in their house but in a car is a different story. For you to
:be able
:to activate a scanner in a car you must have either approval according
:to
:state law or something like being an Amateur Radio operator. So I
:think what
:this really comes up to is that either he was doing something else
:illegal
:or just a dumbnut officer who didnt know what was going on. Stuff like
:this
:needs to be checked out by the ARRL and the FCC and the locals and
:state
:officers need to be informed of the laws, not just make arrests based
:on
:possession. Its about as silly as being stopped for having an antenna,
:I
:guess that maybe they think people are using police radios. It would
:be that
:a 2 meter antenna would be very close in frequency to the police bands
:here
:locally. Down below I will post the actual law as found in the Indiana
:Code.
:So I think that this is either regarding to other illegal activity or

:just a
:cop that didnt know his head from his rear. Thanks for your comments.
:
:IC 35-44-3-12
: Sec. 12. (a) A person who knowingly or intentionally:
: (1) possesses a police radio;
: (2) transmits over a frequency assigned for police emergency
:purposes; or
: (3) possesses or uses a police radio:
: (A) while committing a crime;
: (B) to further the commission of a crime; or
: (C) to avoid detection by a law enforcement agency;
:commits unlawful use of a police radio, a Class B misdemeanor.
: (b) Subsection (a)(1) and (a)(2) do not apply to:
: (1) a governmental entity;
: (2) a regularly employed law enforcement officer;
: (3) a common carrier of persons for hire whose vehicles are
:used in
:emergency service;
: (4) a public service or utility company whose vehicles are
:used in
:emergency service;
:
:
:---
:----
: (5) a person who has written permission from the chief
:executive
:officer of a law enforcement agency to possess a police radio;
: (6) a person who holds an amateur radio license issued by the
:Federal Communications Commission if the person is not transmitting
:over a
:frequency assigned for police emergency purposes;
: (7) a person who uses a police radio only in the person's
:dwelling
:or place of business;
: (8) a person:
: (A) who is regularly engaged in newsgathering activities;
: (B) who is employed by a newspaper qualified to receive
:legal
:advertisements under IC 5-3-1, a wire service, or a licensed
:commercial or
:public radio or television station; and
: (C) whose name is furnished by his employer to the chief
:executive officer of a law enforcement agency in the county in which
:the
:employer's principal office is located;
: (9) a person engaged in the business of manufacturing or
:selling
:police radios; or

: (10) a person who possesses or uses a police radio during the
:normal
:course of the person's lawful business.
: (c) As used in this section, "police radio" means a radio that is
:capable of sending or receiving signals transmitted on frequencies
:assigned
:by the Federal Communications Commission for police emergency purposes
:and

115. Re: N9VKS: Indiana ham arrested for having a scanner/update

Newsgroup: rec.radio.amateur.misc
Date: 2000-09-02 23:24:41 UTC
From: 2121d@gte.net
Message-ID: <39b18d41.38016293@news.gte.net>
Source record: 103965
Cross-posted to: alt.radio.scanner,rec.radio.scanner,rec.radio.amateur.misc,rec.radio.amateur.policy,alt.law-enforcement

Update:

I contacted the Elkhart city clerk (the Bremen State Police Post files all their traffic tickets into Elkhart). What happened was that Josh Church had to go back to court a second time to show proof of having a ham license. At that point all charges were dropped. Case # 20H01-0005-CM-05634, Illegal possession of a police radio-monitor-scanner, IC 35-44-3-12

As I expected, there was only one appellate case on this section of law, and it only dealt with the possession of a radar detector (radar detectors are not assumed to be police radios so case dismissed). As of yet, no one has raised a case to a higher court that would define the limits of the law.

What concerns me is that we are seeing an increase of people using radios, as guns were used before, to commit crimes. Drug runners are using scanners and CB radios in chase vehicles to let the mules avoid the cops. So the cops are now stoping anything with an antenna on it.

And it looks like someone in the Chicago area is using their ham license to cover a spying network. Too many in the Gary-South Bend -Mishawaka-Elkhart area are hearing mobile ham stations trainsmitting number type broadcast, in and around the ham bands.

Therefore the cops are looking hard at anyone with a radio. Even hams. I do not like having to prove that I am a good guy. Even volunteer fire fighters are now getting the "evil eye". In a society where no one knows anyone else, everyone is looked at as dangerous.

Too many young cops (average cop only stays on the force for 5 years). No connections to the community like the old timers had. Too gung ho.

And too many bad guys using my hobbies (guns and radios) to violate our communites. Somehow we hams need to make our skills available to the cops to help stop the crooks.

:From the Popular Communications September issue:
:
:There's been a lot of talk lately about exempting hams from state
:anti-mobile-monitoring laws, but the debates aside, Josh Church, N9VKS
:of Indiana was ticketed for illegal possession of a police scanner.
:(No, the words "police scanner" aren't ours, but rather the Hoosier
:States'). If you've got a tendency to boil over easily, better not
:read this month's "Tuning In" on page 4, because Indiana bureaucrats
:don't know a radio from a box of Dole bananas.

:
:I have tried to talk to Mr. Church to get more details of the arrest.
:I have also spoke with the 1st Sgt of the PAO division of the Indiana
:State Police. The best I can get from the cops is that the ISP
:assumes that anyone with a radio is spying on them. No recognition
:for the public service that hams give (the state's emerency management
:agency disargees), no recognition that banning scanners is going to
:cause cops to have to buy units from Motorola for nearly $4000 to do
:the same function of inter agency monitoring.
:
:Just a fear that the public is out of control.
:
:BTW, I did check. This section of law has only had two appellate
:cases. And nothing that deals with hams. I guess hams are going to
:have to give more money to the legislature to buy exemptions.

I have a TSU-32 from them in some of my equipment. The tones follow a typical
binary-encoded pattern, with all 0's being 67.0 Hz and all 1's being 203.5 Hz,
with the other patterns being the other PL tones in order.

:>What concerns me is that we are seeing an increase of people using
:>radios, as guns were used before, to commit crimes. Drug runners are
:>using scanners and CB radios in chase vehicles to let the mules avoid
:>the cops.
:
:Bull. You can't offer ANY proof of that.

That is what the cops are saying. Go ask Trooper Brant Clam, the PAO
of the Bremen Post. Or talk to the Elkhart city clerk. That is what
they are arresting people for. Using CBs and scanners to avoid
detection by the police. Look at this thread. Several people have
reported being stopped by the cops for having radios, all because the
drug runners are using them.

:>And it looks like someone in the Chicago area is using their ham
:>license to cover a spying network. Too many in the Gary-South Bend
:>-Mishawaka-Elkhart area are hearing mobile ham stations trainsmitting
:>number type broadcast, in and around the ham bands.
:
:And BECAUSE it's in 'or near' the Ham bands,
:you assume it's somone WITH a Ham license??

No, because I personally saw a guy with ham plates
blow by me, jamming the front end of my receiver with
a number type mesage in CW on the lower end of 20.
Others upstate are reporting the same thing.

:>Therefore the cops are looking hard at anyone with a radio.
:
:The Cops wouldn't know a numbers station if it was transmitting
:in their car!

There are a number of ISP troopers who are also military intelligence
analysts in the Guard or the Reserves. I would expect that they have
some exposure to signal intelligence.

:And they have LITTLE authority to do anything about it even if
:they find such a station.

They can gun you down if you mouth off. It is called resisting
arrest.

Internet tracing can be foiled, scrambled, and got around very very
easily.

I won't go into details about how, because the last thing we need is
children, and those who behave like children, posting under assumed
identities.

Just my two cents.

And how often if that, Larry? Once per every 100 contacts? Once per every 1000 contacts? In other words, lets not over state this "perceived" advantage. In the overwhelming majority of cases, voice will get through just fine. That is why voice is so widely used, and CW is not.

As I noted in a private e-mail, the amateur bands probably aren't too prone to official monitoring for content. In most cases, CW acts as a cipher even for amateurs, if sent at sufficient speed. It would be good cover. A mobile will serve to confuse RDF monitoring and the band mentioned (14 mHz) is open world-wide almost all day and night.

Please people...those of us here that have experience with both sides of
the dope trade are just plain laughing right now.

Domestic drug numbers stations based in Indiana
and using mobiles on CW???

Hams being arrested or detained???

Drug runners in and around the ham bands???

And the cops in Indiana are stupid enough to believe it???

First off.....
The Indiana cops probably turned the musings of a tweaker (meth user)
into a pretty tall tale, after finding a CB in his truck after a search
and arrest.

Second...
NO drug cartel worth a 10 spot of crack is going to use CW (smoke
signals) to move the product around in the states. If they are stupid
enough to use a ham radio then they must really be amateur.

Third...
Ham radio operators make crappy drug runners. Do I really have to
qualify that.

Fourth...
Felix Areallano and his brother can afford to buy encrypted astros from
Motorola S.A de C.V. with no questions asked if needed.

> :>And it looks like someone in the Chicago area is using their ham

Sunspots playing tricks.

> I personally saw a guy with ham plates
> blow by me, jamming the front end of my receiver with
> a number type mesage in CW on the lower end of 20.
> Others upstate are reporting the same thing.

Or just another idiot jammer...
>
> :>Therefore the cops are looking hard at anyone with a radio.

At the most the cops are dealing with a major meth problem in the
midwest and some of the tweakers have been arrested and in possession of
some box with a mic attached...the word spread among the patrol ranks
that "the tweakers were on CB"(big surpass eh).

When the DEA and FCC start pulling over cars with antennas then you
MIGHT have something to really worry about.

There are plenty other reasons why this is nothing more than a fantasy
in it's current form.

I'm not saying that radios are NOT used...but any decent smuggler knows
the proper use of radio equipment and freq spectrum for any give
task.

Remember they have a lot more money and resources than the Indiana cops.
Except for the tweakers...they are poor and stupid.

If you put a "tweakers suck" bumper sticker on you car, they would most
likely leave you alone.

> :The Cops wouldn't know a numbers station if it was transmitting
> :in their car!

Yah Huh....they have a special doggie for that.

> There are a number of ISP troopers who are also military intelligence
> analysts in the Guard or the Reserves. I would expect that they have
> some exposure to signal intelligence.

They can probably tune in a signal and listen...but the military is not
really trained real well in drug interdiction, let alone domestic drug
interdiction. The fact the police have those people on staff does little
good if the PD does not provide monitoring hours and a shitload of
equipment.
>
> :And they have LITTLE authority to do anything about it even if

Now those are real intellegent statements. First he complains about the cost of ham radio ("$1200 or more for a jap HF rig") and then he turns around to call the people who do buy those radios "cheap."

And, of course, this "intellegent" individual seems to think that buying a computer, or buying a radio, are the only two choices available to young people today. It seems that most people in this newsgroup decided on a third choice - buying both. But three choices is obviously too complicated for this guy.

And, finally, lets face it guys, we've committed the ultimate sin in this country - we were born white and male. Given that, it is obvious that we are never going to attract "intellengent," "enlightened," individuals like the person above to ham radio. Too bad.

My my - a foul mouth.
But to answer your query - no one
appointed me "GOD".

It is just significant that Elliot Ness -
Champion of truth, decency and the American way,
defender of all goodness and mercy -
upholder of the prohibition on alcohol in the 1920s
and whose sole claim to faim was in being someone
who knows better than the average citizen -
Should die in the depth of the alcohol that
he so selfrightesly fought to prohibit citizens
from obtaining.

Eliot was also a principal purpetuator of the 1934
National Firearms Act - an act which has been used
to deny citizens other civil rights.

Get the point? (Or are you just stupid?)

Gil

by Barbara Curtis

Like many other million something events, the million mom march served up more rhetoric than reality. For this mom it was a reminder of my own progress in discarding the notion that guns are "The Problem."
It began when my husband, Tripp, decided to join the National Rifle Association (NRA). "What for?" I demanded. We didn't own any guns. If fact both of us have solid pacifist roots. For years I'd even avoided killing the occasional household spider.
But Tripp's logic was compelling: Just as we struggled to protect Constitutional rights when we were leftists, we need to do all we could now to protect the Second Amendment. Besides, he added, having a gun for protection might not be a bad idea.
"No way," said I. I'd already made my big concession 10 years ago when I lifted my domestic toy gun ban. My four weapons -- deficient sons had become so gun-obsessed that they found every scraggly branch or sausage link capable of rapid fire. At toy stores, after loading up with things nonviolent, I'd have to drag them drooling from the artillery aisle. So I abandoned my repressive rule for fear it would backfire.
when it came to having a real gun, I stood my ground. And so for awhile my hubby and sons proudly wore their NRA caps, though we may have been the only NRA family who didn't own a gun.
Gradually, however, I started to worry. The federal government's appetite for control over our lives seemed to be burgeoning -- a lawsuit here, a land grab there, federal interference everywhere. Then there was the one-note-response of the Clinton administration following each and every shooting tragedy:
"Let Us Take care Of The Problem."
The last straw was when California required certain weapons to be registered, then followed up by confiscating the registered guns from their law-abiding owners, ensuring that now only criminals would have them. I knew it was time to allow, no urge my man to get his gun.
And so just recently I have for the first time seen a gun up close and personal, watched my men leave for target practice, experienced the security of knowing our home is protected when we go to sleep, and finally, in the culmination of a process that likely never would have begun had I not been more afraid of losing my Constitutional rights than of exercising them, I learned to ready, aim, fire.
But perhaps I'm not all that unusual. In just the past year and a half, NRA membership has increased by 30 percent, soaring from 2.7 million to over 3.8 million despite almost unbelievably biased media coverage of the 129-year-old nonpartisan group.
Brian A. Patrick, a university of Michigan, Ph.D., has documented that bias. In a 190 - 98 survey of the "elite" press (New York time, Washington post, Los Angeles times, wall street journal and Christian science monitor), Patrick

found that 87 percent of editorials and op-eds on the NRA were negative. He also found journalists systematically belittled the NRA by running satirical headlines, discounting NRA leadership, ignoring NRA events, and choosing loaded words ("lobby" Vs "advocacy group, 'claims" Vs "says").
Patrick concluded that rather than harming the NRA, this media bias actually benefits the group by energizing it's membership. perhaps the media would be surprised to learn that it's not just rubes in flyover country who are reacting to their clumsy attempts at thought control, but educated, sophisticated, and formerly self-identified liberals like me.
Some of us just can't give up the old wisdom --- "Question Authority." We do well to be wary, to look beyond feelings and slogans. A government that already has 20,000 gun laws on the books, neglects their enforcement, then clamors for MORE ! clearly has an agenda beyond simply saving lives.

I am sending this to you personally and I hope you don't mind. As a former cop I can say N9NWO is correct. Recently on I-70 on the west side of Indiana, state troopers have busted a few major narc trucks. In two cases the back-up officers noticed one car sitting on the side of the road. Both had what they call a K-40 (I think) whip antennas and in both these incidents the back-up officer called into dispatch to have these cars checked out. By the time a third officer arrived where these cars where pulled off on the shoulder, they were gone. Something else to ponder: One of the trucks stopped contained about 1500 lbs. of coke worth about $18 million. Now it's not that hard to imagine some sort of _insurance_ would be included with that amount of money involved.

Let's see. Some one rides around listening to a scanner.
Cops don't like it so they, what, steal (they call it confiscate,
sounds better to them) the scanner, or they arrest him (for what?).
If there is no case there is no case and there is no law
that would stand up in court against listening to a radio,
any kind of a radio. If they believe he's involved with

drugs, then they must prove it (or bribe an informer).

Some states had laws against CBs in the 1960's. Just
took 'em right out of the car and smashed on the road. Same
with radar detectors. And now they're starting to pull the
same thing with Hams.

The first thing to understand is that if the cops really thought
drugs were involved then they could take the license number, put
a tail on him and he will eventually lead them to witness
something illegal. But to pull people over and take radios
or charge them with some "offense" means that they have
resurrected the old policy. They're after the Hams because
they are easy pickings and represent the worst of the "evil"
public, they can communicate.

LEOs are first and foremost, elitists. They like the idea of
being different and able to do things and know things
that the average person does not. They also crave power,
the gun and the shield. They also like knowing the badness
of the public because their original motivation to become
a cop was to eradicate the bad guys. Soon they begin believing
that they are "the thin blue line", the only ones on the side
of good and that the bad guys are the civilians.

Hams are another group of elitists. They like the idea that
they are privileged characters just like the cops. But they
don't have the same amount of power as the LEOs. Since drugs
have now been linked with radios, radios are targets and
privileged radios are the easiest. They get points for this
stuff you know and the Feds pay each jurisdiction money for
Federal "violations".

Since there is no real law against radios, the state/local
policy could be changed by the Governor or AJ in a matter
of hours. They won't because of the political points and the
Federal payoff.

Then there would be a bunch of dead cops, if that was the
case. What's the use of insurance, if they are not going to
use it? To verify the cops scored 18 million?

Well, if they wouldn't use humans, then maybe the insurance would work. No one knows who these guys are supposed to kill. Maybe they are just supposed to kill other drug runners. The only thing I can say is that it would be somewhat hard to get in a gun battle from your car without practice. I mean you have cars doing 70+ and your going to pull up behind a cop who is already alert that there could be a chase car and start shooting?

> To verify the cops scored 18 million?

Sorry, www.starnews.com ran the story, but their search engine is not bringing it up.

142. Software Updates PSK ETC

Hi all.

You may or not be aware that I carry most current psk etc softwares on the download page of my site, and the following software's have been updated.

Logger by Bob K4CY is now in version 7.09

Zakanaka is a special case as it is in Beta testing format, and now upto Beta 16.

MixW32 by Nick UT2UZ is now in version 1.43 (Registered, and Demo)

Apart from the Beta16, the above are on my download page.

http://www.btinternet.com/~g3vfp/download.html

Best Regards,

Dave G3VFP

> Guess the spotters didn't work very well, did they??

They are not spotters, they are cars that stay behind. Well I guess they could spot cars coming up the interstate, but they stay a mile behind. The reason I heard was that there were originally used so that the occupants in the drug car would not give hugh sentences because no guns would be found in the drug car. Who knows the truth. I bet drugs don't even exist and the pigs have used sugar in every single photo of confiscated cocaine!!! Yea that has to be it. Just like NASA made up going to the moon to get more funding.

> Drug dealers would have to be totally stupid to use easily visible spotters
> and easily monitored freqs for the spotters.

They are only 'easily visible' because they pull off the side of the road. Also I have heard NOTHING about using ham radios, they use CBs. They stay on channels that are not normally used. I for one see no reason to lie, I mean our state cops said there are chase cars and your opinion is that they make it up for money could be true, but when your state is not going to give you more money then why keep making it up? Let me guess, you think at some point some off-duty cops will shoot one of their own to make this look like a chase car? Then the cops will get their money. Yea I bet that is it.

> Cops will say ANYTHING that helps them get extra funds, and I say that
> having several good friends who ARE cops.

Yes, but they are not getting funds. So when some cop gets shot by a chase car I am going to demand an internal investigation because it's probably other cops shooting their co-workers cause they need and want that money so bad. $18 million and you people act like this is total fucking bogus and no one would

ever do this. Well if I fucking had just a few hundred dollars I would be packing. The thing is I would be defending my life if someone tried to take my money, no fear of jail (as long as the gun grabbers don't get their nazi gun laws passed). These guys who are in these chase cars (and your right, it may be a total lie) have to take into account that they will murder a cop. It would be totally premeditated so that means death penalty here in Indiana.

With fully automatics vs. his 9mm pea shooter? Yeah.
Especially if it means losing 18 million dollars of someone
else's drugs/money.

Well this is why I am getting out of the job. I don't like the attitude you describe and your right, it is there and it's getting worse. I cannot believe it but some of my co-workers favor the assault weapons ban. However I also disagree. I do see myself as the thin blue line. I mean why the fuck don't more people take care of things themselves. Without us, people in major cities wouldn't know what to do. Everyone in m.s. wouldn't need police. However I often wonder when I get calls of a man beating off in traffic why there are no civilians around to help enforce the law? I mean in some areas (mostly rural) people would come out of their houses and take care of the problem. I guess that's why I would much rather work in a rural county than a city, however the money is usually in city police work. Why? Because most citizens are sheeple and don't want to take care of things themselves. I understand it's my job to take care of problems, but when citizens keep brushing everything off they freak when the cops talk blue flu, etc. Damn I don't know what half the people in Indy would do if the cops walked off the job. I guess for some people we are that blue line, for others were are there for assistance, but they know their protection lies in their own hands.

I have a TS-50 and was wondering if it was able to handle a Heathkit SB-230 on the relay. I know a Icom needs a relay kit but I wasn't sure about the Kenwood.
Thanks
Dave

Man, you guys don't post much here. Anyway, I am new to ham and will be going to my first club meeting Tuesday. For the sake of conversation, what is the range of 2m 50 watt radios and can a mobile unit be removed from the car and set up back in the house? Do 2m radios cover the frenquency range of CB radios or would I want one of each? Thanks

=========
Hi Chris -- first there is about 30 or more posts here per day. Check that your news group reader isn't limiting down loads.

Second -- for the MOST part 2M (144Mhz) is like TV or FM -- that is line of sight. Range depends on antenna gain, transmitter power, antenna height and terrain. On occasion 2M "skips" to far off places but this is rare.

Using 2M repeaters (they are all over the world) one can have ranges of 100-200 miles if the repeater is on a big mountain. Mobile to mobile simplex might be 10 miles depending on terrain.

2M rigs cover 144 to 148 MHz or a portion thereof depending on whether it is an all-mode or for FM work only.
CB frequencies are 25.165 Mhz to 29.665 Mhz --- entirely different bands requiring different FCC type acceptance procedures -- so no radio that I know of will cover both of these.

Next a mobile rig can be taken out of the auto and used in your house, you only need a 12V power supply available at Ham dealers or Radio Shack. Be sure and choose an adequate current rating for your power supply. A 50 Watt radio can draw upwards of 11 Amperes. See Kenwood TM-261A specs at URL:
http://www.kenwood.net/products/index.cfm?AMA=open&ama_mob=open&radio=TM-261A&selection=Amateur

You will need a Amateur Radio License as you probably know, if not see URL:
http://www.arrl.org/hamradio.html

I was referring to transmitting on the CB bands. I doubt that someone using a ham radio would bother dialing the power back to the CB-legal level. The fact that most ham HF sets put out 100 watts and is not limited to transmiting only on the 40 specific "channels" or frequencies reserved for the CB service is probably the reason they're using them as CBs to start with. Either way, it is illegal to transmit on a CB frequency with non-type-approved equipment, and illegal to transmit on frequencies not assigned to the amateur service with an amateur-approved radio.

I live in West Lafayette. We have guidance counselers here that push
the idea that the military is for losers because "our children are
going to college, let the losers serve". The left wing pushed the
idea in the '80s that if the educated elite just paid their taxes then
the government would raise their kids (ie the teachers, look at the
mess schools are now because parents do not want to get involved),
that the poor and the working class could be bribed to be the military
and the police, that the poor could be made to "disappear". That
taxes equal caring (we now have many elite who want the government
to take care of their parents so they will not have to be "involved").

Look at what the Indianapolis Star published on 911 call abuse. One
guy called to have the police come down and help carry boxes to his
car!! The elite feel that the police are their servants. Yet they
also are afraid of the police and military because they see them as
lower class people who know more about guns and such. It might be
getting thru that if you hand off personal responsibility to another
then that person might someday rule you.
```

And the military and police are superior to most civilians. Smarter, better physically fit, more ethical (look at how unethical most liberals are).

SB DX @ WW < KB8NW $OPDX.475
Ohio/Penn DX Bulletin No. 475

The Ohio/Penn DX PacketCluster
DX Bulletin No. 475
BID: $OPDX.475
September 4, 2000
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AI2Q, W3UR & The Daily DX, KE4BKL, N4AA & QRZ DX, NI6T, W6KNB, K7BV, W7MP, K8YSE, 4X6UO, 9M2TO, DJ5AV & DX News Letter, DL2VFR, DL5NAM, EA8EE, F5NOD, HA0HW, JA1HGY, JI3DST, PA3EPG, S52DG, SV1ENG, UT9FJ, VK2EO, VK2GJH, VK4AAR and ZS5BBO for the following DX information.

4W, EAST TIMOR. Dennis, K7BV, has informed OPDX that he has recently updated the 4W/K7BV (4W6DX) East Timor DXpedition Web page. This Web page is very impressive, and you should take the time to check it out. The site contains up-to-date information on this operation, tentatively scheduled for October 8-16th. The site also mentions that Dennis has recently picked up the license (August 31st) at the UN Headquarters in New York City. The Web page can be found at:
http://www.qth.com/k7bv/timor/

5N, NIGERIA. Bogdan, 5N3CPR, operates quite a bit on 17 meters CW. He is usually active between 2200 and 0100z around or just below 17080 kHz. He will be heading back to Poland soon for "time off," but will return to Nigeria and resume his 5N3CPR operation in about five weeks from now (per AI1Q). He is running an FT-100 that he finds convenient to carry on air-planes, and a half-sloper antenna (not so convenient). His home call and QSL route is SP5CPR.

8Q7, MALDIVES. Adam, W7MP, will be active as 8Q7AB from September 30th through October 9th. His operating location will be Bandos Island (IOTA AS-013, CQ ZONE: 22, ITU ZONE: 41 and Continent: AS/AF). Activivty will be on 80-10 meters (QSX up). His equipment will be an ICOM 706 MK IIG into an Ameritron AL 811H at 800 Watts to a Butternut 9-band vertical and Alpha Delta 10-40 notrap dipole. QSL via W7MP. NOTE: This is a newly assigned callsign and is not in the Callbook yet. QSL information is as follows: Adam Boettiger, W7MP, 420 SE Kathy Street, Sherwood, OR 97140 (USA). For additional information, an online form to request cards via the bureau, propagation window projections, frequencies, further

updates and more, see the Web page at: http://www.dxpedition.com/

9M0, SPRATLY ISLAND. One of Japan's DX clubs, the Far East DX Ploiters (FEDXP), will carry out a DXpedition to Layan Layan Island in the Spratly Island group to celebrate the 40th anniversary of their club. The FEDXP was established in 1960. Some may remember that in 1982 FEDXP members went to the Republic of Guinea (3X) to celebrate their 20th anniversary (callsign were 3X3JA and 3X5DX). The Layan Layan Island operation will take place September 12-16th. This time look for operators JA1BRK, JA1RJU, JA4DND, JK1OPL, JR1FBE, 7K1WLE and JF2XGF to use the callsign 9M0F from the Spratlys. They will operate on 160-6 meters on CW/SSB/RTTY (using the usual DX frequencies). They plan to have two HF sations operating simultaneously and the beacon will transmit 24 hours around the clock on the 6 meter band. QSL via JA1HGY: Nao Mashita, 8-2-4 Akasaka, Minato, Tokyo 107-0052, JAPAN

A5, BHUTAN. By the time you read this, operators/members of the Clipperton DX Club should be active from Thimphu until September 14th. Team members include Denise/F6HWU, Gerard/F2VX, Alain/F6ANA, Vincent/G0LMX, and Alain/F5LMJ. As of press time, the callsign is unknown. QSL via F8RZ. Suggested frequencies are:
CW - 3505, 7005, 10105, 14015, 14015, 18075, 21015, 24895 and 28015
SSB - 3795, 7045, 14195, 18145, 21295, 24945 and 28475 kHz
For updated info, check the Clipperton DX Club Web page at:
http://www.multimania.com/cdxc
ADDED NOTE: From "The Daily DX", Laurent, F8BBL, is the pilot station for the Clipperton DXpedtion to Bhutan. He reports that the recent A50CDX station is not the group and is a pirate. As soon as the team starts he will confirm the callsign. They are not expected to be on the air until around 0630Z Sunday September 3, 2000.

A5, BHUTAN. A station signing A52FH was active on Sunday on 14195 kHz at 1250z and 21295 kHz at 1426z. No other details are available at this time.

D4, CAPE VERDE (IOTA operation). Operators Manuel/EA8BYG and Jose/EA8EE will be active near the capital of Mindelo from the Island of Sao Vicente (IOTA AF-86, new reference about June 2000) from November 1-8th. They will actually be operating from Carlos', D44AC, QTH and use his callsign. Their activity will be on all HF bands around the IOTA frequencies including the 17/12 meters and VHF 50 MH (grid locator HK76KM). Modes will be on CW/SSB/RTTY/PSK31/HELL/STREAM/MT63/SSTV and PACTOR. Their equipment will be an IC-706 MKIIG, with vertical antenna and a directional antenna A5S to be built on a mast. They will also have a homemade dipole for 6 meters, and TS44O Kenwood. The QSL via EA8URL (The Gran Canaria DX GROUP).

DX MAGAZINE - MOST WANTED SURVEY 2000. Carl, N4AA, Editor of QRZ DX, has asked for DXers throughout the world to participate in the DX Magazine's 2000 Most Wanted Survey. This year everyone will have a chance to participate because the survey is available on the Web site:
http://www.dxpub.com
It will also be in the September/October issue of The DX Magazine scheduled

for mailing later this month. The results will be published in the January/February 2001 issue of The DX Magazine and will be posted to the Web site in late January 2001. OPDX urges DXers to participate. The Survey is very important to potential DXpeditioners, and many use this listing to determine where/when to go on their trips. Carl's complete press release will be sent to all OPDX InterNet Subscribers as an additional bulletin.

E3, ERITREA. Members of the Bavarian Contest Club (BCC), DL5NAM/Chris) and DF4RD/Dieter, will activate from Asmara, capital city of Eritrea (7th most wanted entity), from October 17th through November 1st. Activity will be on 160-6 meters on SSB/CW/RTTY and PSK31. Their callsigns and QSL info will be announced upon their arrival. Any donation or sponsorship is welcome (their callsigns costs 1000 USD). For more information, contact Chris/DL5NAM via E-mail at: dl5nam@web.de
Or check later (under construction) at: http://www.qsl.net/e30??

FO0, AUSTRALES ISLANDS. Mike, KM9D (FO0MOT), is active from Raivavae Island (OC-114) as FO0MOT/P. His activity will be mostly on CW but on all bands until September 10th. He was spotted this past weekend on 3507 kHz at 1120z, 24918 khz at 1749z and on 14036 between 1100-1430z (also again at 0944z). QSL via OM2SA, Juraj Sipos, 93013 Trhova Hradska 550, Slovakia.

IOTA NEWS.....
IOTA-OOPPS. In last week's bulletin (OPDX.474) we stated that Uznam Island was EU-179. This is wrong it is EU-129.

AS-147. Takeshi, JI3DST, will be active from Hokkaido's Coastal Islands (Okushiri Island) as JI3DST/8 from 0800z September 23rd to 0200z September 25th. Activity will be on 17/15/12/10/6 meters SSB.
QSL via the JARL Bureau (Bureau is Best) or direct (Please don't send USDs) to:
Takeshi Funaki, 2-18-26 Hannan-cho Abeno-ku Osaka-city,
OSAKA 545-0021 JAPAN.

CUBIAN IOTAs. Members of the GRUPO DX CUBA will activate ALL IOTA's references in Cuba during the month September and also activate a "new one".
NA-093. Sept. 1-3rd CO1OTA, Cayo Juatias, Archipielago Los Colorados
NA-086. Sept. 7-9th CO7OTA, Cayo Coco, Archipielago Camaguey
NA-NEW. Sept. 14-16th CO8OTA, Cayo Moa Grande (NEW REFERENCE)
NA-204. Sept. 21-23rd CO6OTA Cayo Sta. Maria, Archipielago Sabana
NA-201. Sept. 28-30th CO9OTA Cayo Caguamas, Arch. Jardines de la Reina
NA-015. Sept. 1-30th CO0OTA Cuba, (main land)
NA-056. Sept. 1-30th, CO4OTA Isla de la Juventud, Arch. Los Canarreos
QSL via bureau or GRUPO DX CUBA. Apdo, 6060 Cdad. Habana 10600, Cuba.

EU-136. Alen, S53MA, will be active from the Island of Krk using the callsign 9A/S53MA/P now through September 12th. This will be a QRP operation using a Sierra 1-2W, dipoles, GP for 20 meters. Activity will be on 80-15 meters between 2000-0000z. A special QSL will be provided. QSL via home callsign.

EU-136. Dusan/S52DG and Borut/S52LD will be active as 9A/S52DG/P and 9A/S52LD/P from Croatian Island of Krk (CI-046) from September 15-19th Activity will be on 40-10 meters, CW-SSB. QSL via CBA or bureau.

OC-212. A team of VK operators will be using the callsign VI2BI to activate Broughton Island from October 6-15th. Activity will be on most bands for the duration of the operation. The team will arrive on the Island at approx 0200z on the 6th.

OC-234. The "Timor Sea DX Group" TSDXG (ops VK8AN, VK8DK, VK8TM and VK6YS) finally got Browse Island on the air as VK6BM about 1145z, September 1st. They were using basic equipment to start and the antenna was only 20 ft. off the ground. Things were improved on September 2nd when daylight arrived. The seas were very bad which delayed the landing considerably. QSL via VK4AAR, Alan Roocroft, POB 421, Gatton 4343. Australia. ADDED NOTE: Some people are still using the Arana Hills address which expired in 1993, and others are using the Dalveen address which expired in 1998. Please use the GATTON address. **STOP PRESS**
The horrific seas which delayed the landing of the TSDXG team on Browse Island has now blown the catamaran "Tearaway" up on the beach. The operators have unanimously decided to abort this part of their DXpedition. They expect, at this stage, if possible, to refloat the catamaran at high tide around 0500z September 3rd. If there are no further difficulties, they will probably proceed to Cassini earlier than originally planned. Their QSL Manager Alan, VK4AAR, will keep us posted if any further changes happen. Browse is now finished for this trip.

KH5, KINGMAN REEF. Another press release by the Kingman Reef/Palmyra DX Group was sent out by Garry Shapiro, NI6T, this week. OPDX InterNet Subscribers will receive a copy of the complete release as an additional bulletin. In short, the plan DXpedition is on track. The Kingman Reef DXpedition team will depart Honolulu by air on Sunday, October 15 for Kiritimati Atoll (Christmas Island) in Eastern Kiribati. The team will be met by the motor schooner "Machias" for the voyage to Palmyra Atoll and Kingman Reef. At Palmyra, the team will be joined by Mike, KH6ND, who is currently active as KH6ND/KH5. The team may have the opportunity to spend some time at Palmyra before continuing to Kingman Reef. During at least 12 days at Kingman, they will be active on all bands from 160 to 6 meters on CW, SSB and RTTY with up to six stations. The expenses for this DXpedition include over $50,000 for transportation! They will be heavily dependent upon assistance from both individuals and DX organizations, especially in Europe, to meet their objectives. Contributions should be sent to:
Tom Harrell, N4XP, 2011 New High Shoals Rd., Watkinsville, GA 30677.

NEW 6 METER BEACON. Arie, 4X6UO, informs OPDX that a new 6m beacon is on the air with a temporary callsign and location. The frequency is: 50.080.20 MHz The beacon CW text is: " vvvvvvvvv 4Z5AY test 4Z5AY test 4X/4Z beacon located in Tel-Aviv km72jb now tx all the characters from memory abcde

fghij klmno pqrst uvwxy z1234 56789 0.,?-/ 15 seconds key down "
For more info, check the Web page:
http://www.iarc.org/~4z5ay/htmls/bea_tec.htm

QSL INFO AND NEWS.................
Ben, PA3EPG, reports that he is the new QSL Manager for Serge, 4K5CW.
He has the logs from August 16, 2000, and later. QSOs before that date
Ben can confirmed, but he must check these QSOs first with Serge.
Anyone who needs Azerbaijan confirmed can send the QSL card to the
following: Ben van Leeuwen, Zwolseweg 57, 8181 AC Heerde, The Netherlands

The FR/F6KDF/T Tromelin Island DXpedition's LOG is now available on
the Web page: http://perso.easynet.fr/~f6jjx/menu.htm
For direct links to specific items on their Web page use the following:
To the LOG: http://f5nod.waika9.com/frt_log.html
To the expedition statistics: http://f5nod.waika9.com/frt_stat.html
To the expedition pictures: http://www.citeweb.net/frt/pictures.html

9M2TO QSLs for contacts between July 5th through August 15th (including
the contest) have been sent out via the JARL Bureau on August 20th.

Ron/WA6FGV and Frans/K6SHJ were active recently on Moorea, French
Polynesia as FO0AND and FO0JAN, respectively. QSL to home calls: FO0AND
to WA6FGV and FO0JAN to K6SHJ. ADDED NOTE: They may be active again from
Moorea for a few days in mid September on their way home to Santa Barbara,
California, after operating from South Cook Island (See ZK1 below).

The SW8LH operation from Akrotiri Light House Santorini Island (EU-067)
by SV1ENG and SV1EFP is now QRT. The operators will transfer about
3000 QSOs from the paper log to the PC log. They will have the QSL
cards printed in the middle of October. For informations visit the Web
page: http://www.qsl.net/sv1eng/

A QSL new address has been announced for UX2FXX (UT9F contest callsign):
The Odessa City Young RadioAmateur Club Station, P.O. Box 100,
Odessa 65065 Ukraine

QSL CARDS FOR ZD9IL. Many have been wondering where their ZD9IL QSL
cards are and what is taking so long. Well QSL Manager Edwin Musto,
ZS5BBO, informs OPDX that the problem is that Ian's, ZD9IL, logbook
was mailed to Edwin about a year ago and has come up missing. The last
log Edwin received was dated 30-June-1998. Edwin has finally been able
to make a contact with Ian, and he has now promised Edwin that he will
mail him a copy of his log at the end of September when the next mail
ship leaves the island. Edwin wants people to realize that the logistics
for this island are not easy, and they only have about 4 mail boats a
year. Ian is not on any E-mail like we are, and this creates major
problems. As soon as Edwin has the log sheets, he promises to work his
tail off to get all the QSLing up to date. Please don't send a second
card as this causes more headaches. If you have sent a card it will be
answered once he has the log. The QSL address is: EDWIN MUSTO (ZS5BBO),
P.O. BOX 211032, BLUFF, 4036, SOUTH AFRICA. ADDED NOTE: Ian has also

told Edwin that he has not been very active as high winds have blown down antennas, and hopes he will be active within the next month.

SPECIAL EVENT. Look for the Alamance County Amateur Radio Club special event station, K4EG, on September 16, 2000, to commerate the Burlington Carousel Festival. The operating frequency will be 14.260, and others will be announced at the festival. The operating times will be between 10:00 AM to 5:00 PM (EDT). A nice certificate will be given out for the price of a #10 SASE to U.S. hams and a IRC for foreign hams (direct only please). The Certificate Manager will be KE4BKL, and the address can be found on the QRZ.COM or BUCK.COM Web sites, or he can be contacted via E-mail at: mwoakley@bellsouth.net
They request to please help them celebrate their festival and help the ACARC promote amateur radio to the public.

SV5, DODECANESE. By the time you read this, Laci/HA0HW and Tom/HA4DX will be active as SV5/homecall until September 11th (possibly the 18th). The two operators are on holiday with their wifes on Kos Island (EU-001) close to Rhodes Island. Activity will be on all bands including the WARC bands on CW/SSB and maybe RTTY. The low bands activity will depend on the local free place to hang up some long wires. On the other bands, they will use mono verticals on fishing rods as they did for SV8/HA0HW/p in August from Corfu Island (EU-052) and made 5200 QSOs. They want to remind everyone that this is a vacation, but they will try to be on the bands at local early mornings and late evenings while their wives are in bed.

T30, WEST KIRBATI. Jack Haden, VK2GJH, informs OPDX that he will be on the air from Betio (RJ-61), South Tarawa as T30JH from September 14-26th. He states priority will be given to 50 MHz using an Icom IC-736 (100 watts) into a Cushcraft 5 element beam on that band. He will also use a Kenwood TS-690S into a four element beam for the HF/WARC bands. QSLs go to VK2GJH (direct only) with the proper SAE for return reply. Jack mentions, "Due to immediate connecting flights there will be NO operation from C21 this time, sorry!"

XU, CAMBODIA. Peter, ON6TT, was heard active this past weekend as XU7ABI on 17 and 20 meters SSB. His activity is only going to last until September 6th. QSL via ON5NT.

ZK1, SOUTH COOK ISLANDS. Ron/WA6FGV and Frans/K6SHJ are now active on Rarotonga (South Cook) as ZK1FGV and ZK1SHJ, respectively, until about September 14th. They have been active over the past weekend on 20/17/15 meters CW. Also, look for them to possibly be active again from Moorea (FO0) for a few days after this operation as they head their way home to Santa Barbara, California. QSL via home calls.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 440-237-8208 28.8k/14400/9600/2400/1200 and leave a message with the Sysop or send via InterNet Mail to: kb8nw@barf80.nshore.org
- OR -
Use the VOICE or FAX answering machine at 440-237-8208 which shares the same phone line as BARF-80 BBS using a data/fax/phone switch. To access: 1) Dial Number. 2) Wait for first ring (the second ring should be a false ring from the fax/data switch box) and then dial four quick ones ("1111"). (NOTE: Some FAX machines that send single "BEEPS" every second will not have to do this step.) 3) The phone will pick up and after the "BEEP" leave your voice message or FAX.

> the people. [snip]

I don't care how certified your equipment is, it still generates RF emissions. For that matter, computers (and other devices) are not certified "safe" as far as RF emissions are concerned - they are only certified to comply with FCC emissions standards.

> You still haven't responded to my
> concern that radio hams may be
> causing the very conditions they
> take such pride in warning the
> public about. [snip]

And I'm not about to waste time responding. There is not a thread of evidence that normal RF emissions affect overall weather conditions. Enough said.

> guarantees there will be a population explosion of ham operators.
> 2. Christina Aguilera: Ditto. Ham radio is a genie in a bottle, and
> she'll be able to rub it the right way.

If you recruit a a few billion teenaged girls to ham radio...the boys
and dirty old men will follow. Instant CB chaos will rule. The chicks
will leave soon after and that just leaves the teenaged boys and dirty
old men.

What is the use??? You can't get dirty pictures on ham radio...so it's
doomed. Can those little chickies with thier belly button showing buy
thier make-ip and clothes with a ham radio?

Ham radio will only survive under 2 conditions...

Drop all code and testing.

Add porno.

> 3. Pierce Brosnan: Ham radio would be cast in a completely new light
> if the man behind James Bond became a ham operator. Ham radio will be
> as exciting and cutting edge as Q's nifty gadgets. Will Bond like his
> radio waves shaken and not stirred?

I can see the script now...

Bond: Hurry...to the communications tower...we must CQ Q"

Sexy bond girlie: "I can ICQ Q with my palm pilot James"

Bond: No I mean I can CW Q by going CQ,CQ,CQ....
Sexy gurly: I'm confused James.....
Bond whips out a genuine swingline stapler and hooks it to a mini
transmitter and starts tapping out SOS.
But he is foiled by a dogpile on the frequency which is jammed with
teenaged girls sharing backstreet bots love stories.

> 4. Michael Jordan: Think of Air Jordan antennas.

Gang members with two ways would have provided much better intergang mutual aid during the Lakers riots in L.A. When I picture this I see the gang from the 437 machine doing battle with the 110th street "Bloods" at a Dennys in Carson City. Toooooo Funny!!!!

> 5. Gloria Estefan: Gloria Estefan has a very diverse group of fans by
> age, gender, and ethnicity. She would be especially adept in bringing

> airwaves . . . . .

Forget her....get the little "cuba boy"...Fidel thinks ham is sooooo cooooool.

You also should have a special colored ribbon that the "stars" can wear to all the gala events.

> 6. Michelle Kwan: Ditto. She would be especially adept in bringing
> young people, figure skating fans, and those of Asian descent into ham
> radio.\

You got the right idea about getting sexy chicks into ham radio.

If you can pull this off.....I will be first to get my ticket.

Perhaps he meant the "new" tech+ version of the tech license, or that he's ready to go ahead quickly in license class. I really wish this netgroup would be a bit less legalistic about supplying information...

I addressed the libnet1 msg on how it was delivered. Content is of NO
concern to me. I read, and understood what he was saying and applauded
him for the poignant and "to the quick" DELIVERY. I neither agree or
disagree with such stupid, sillyass crap. Draw what ever conclusion you
want about my comments-but you are dead wrong!
I read thru the spelling, typo errors, and missing words.
I didnt have to look words up in the dictionary. He seemed to write
everyday words.
I associate with no one! I talk to voices on the radio infrequently.
Dont bother to respond.

N8UD aka Percy Q Armyballs III, col old GI

No wonder the Amateur Radio hobby is going the way of CB. When you
got Hams like these with nothing better to do than act like immature
imbecile's, would do you expect???!!! Not Surprised Anymore, Red Pony

If you get a cb handheld that can hook up to a base antenna you should get out better than the built in antenna or rubber duck.

What is it with these evangelists and their "POWER OF JESUS CHRIST!"?

The POWER of THE LORD. The POWER of FAITH.

It's like a damned Ford truck commercial.

"OUR LORD JESUS has 20% MORE TORQUE than the LEADING COMPETITOR!" (shot
of JESUS hauling logs over a dirt road while KRISHNA spins his wheels
in the mud)

"Built JESUS tough!"

What has this to do with radio?

Two words the federal government has been trying to push upon us - registration and confiscation.

That will be the fucken day I give any information on what I have to the IRS or any other agency. I didn't fight for this country to come home and just give my shit away. This bull shit country is turning into a communistic state.

And screw Clinton. If he lowers OUR flag he needs tossed over board. And that will be long over due.

The sooner we get rid of this administration the better. It's one freedom after another going down the drain with these assholes.

You got that right. I have long ago adopted the military's policy of "Don't ask, don't tell" when it comes to any of my guns or personal possessions. You should have seen the look on the Census takers' face recently when I told her that it's none of the Feds business who I am or where I live, or how much money I make. I kindly informed her that they already had all of this info in various other databases, and that her efforts were a major waste of time and taxpayers' money...

180. CW corrupts amateur operators

Newsgroup: rec.radio.amateur.misc

: No, because I personally saw a guy with ham plates
: blow by me, jamming the front end of my receiver with
: a number type mesage in CW on the lower end of 20.
: Others upstate are reporting the same thing.

As I said before, this is an example of what can happen to anyone who learns Morse code, especially in the Michiana area. First, people learn and practice CW for the honest purpose of obtaining an amateur license, but then the Mafia offers them extremely large amounts of money to provide radio communications for its underworld activities and they succumb.

If the code requirement were completely dropped, this kind of thing would happen less often. As it is right now, we have a cancer growing on amateur radio as more of its licensees become seduced by the easy income that criminal organizations offer to CW operators. Current estimates place the fraction of operators who receive at 20 wpm or more and who are also a member of an illegal organization at nearly 60 percent and growing. The old Extra Class license has clearly paved the road to Hell.

Painful as it may be, the only solution is to expunge CW from the amateur requirements. Only then will the service return to its untainted roots.

181. the Death of Morse Code

Source record: 103932

From the ARRL Website:
IARU Region III Conference Calls for Morse Phaseout
NEWINGTON, CT, Sep 5, 2000--The 11th International Amateur Radio Union Region III Conference ended September 1 by resolving to seek the ultimate removal of Morse code proficiency as an International Telecommunication Union licensing requirement for HF operation. As "an interim measure," the conference agreed to support the reduction of all Morse code testing speeds to 5 WPM.

"IARU Region III strongly supports Morse code as an effective and efficient mode of communication," the resolution said in its preamble. "However, it believes that the position of Morse as a qualifying criterion for an HF amateur license is not relevant to the healthy future of amateur radio."

If you need a manual, they might be able to scrounge one up:

Henry Radio
2055 S. Bundy Dr.
Los Angeles, CA 90025

They'll probably want to charge you something for it. However, I offer it as
your last resort.

The problem is the strength of the e-field. The 1KW 80 meter ssb
transmitter will produce far LESS e-field v/m than a cell phone. Think
about it - which is more likely to hurt your hearing? A tuba 200 feet
away or a trumpet 6 inches from your ear? They guys where I worked a
few years ago (doing emc testing for a large corporation) told me (I
have no reason to doubt them) that a cell phone will produce about 60
V/M at your head. This may well be dangerous if you tend to talk for
extended periods of time. This appears near the limits set for the
IEEE standard for safety in an uncontrolled environment. A 1Kw 21.2
MHz transmitter is shown at around 10 - 20 V/M in the shack and 14 V/M
12M from the base of a 60 foot tower. The safe uncontrolled limit for
this frequency is around 90 V/M. Draw your own conclusions. Any real
distance (even a neighbor's property) away will show even less e-

field. Of course, commercial broadcast at 50KW will produce a much stronger signal - but that rapidly diminishes at any real distance from the antenna. Chances are your microwave and monitor will produce fields stronger than any ham station anywhere near you. Of course, there are the guys who like to run the 8 pill (or more) linears in their cars or trucks. Now you are close to the antenna. Guess who is more likely to glow in the dark?

186. HTX-10 Question

Newsgroup: rec.radio.amateur.misc
Date: 2000-09-06 03:31:44 UTC
From: tfusco@mediaone.net
Message-ID: <39b5b970.288532851@news.mw.mediaone.net>
Source record: 103837

I just picked up a used HTX-10 for my car. I don't know if I have a problem or not. I hope some other HTX usen can help. When I key the PTT on FM and Am the bar on the LED screen registers and shows the relative RF output. When I switch to USB (and LSB) and key the mic nothing registers until I start talking. In addition, nothing registers on the SWR meter until I start talking. This makes turing the antenna impossible. Is this what is supposed to happen? The instructions do not deal with this issue. I thought it might be the mic, but it seems to work o.k. on FM and AM. Did I get a bummer? Thanks very much. Tim Fusco KC8MBN

This is normal, SSB does not put out an RF until audio is input to
microphone. To tune it up before transmitting simple put the radio in AM/FM
and key the radio. Once you know what the settings are for each portion of the
band on your tuner then write them down on a sticker and put them on top of
radio or tuner.

Without any specific familiarity with the rig, I'd say you got one in perfect working order. That's what you would expect it to do because you have no SSB output until you talk; that is kind of the idea. AM is a misnamed 'carrier' (it don't carry nuthin) plus two sidebands of audio. The idea of SSB is to remove one of the duplicate sidebands and the useless carrier and produce more or less pure audio; no talky no power.

You should see something like this:

FM: steady output on both the LED and SWR bridge
AM: output should increase up to 50% when audio is applied
SSB: output proportional to audio only.

Tune the antenna with the FM and it will behave the same on the other modes.

Have fun

Some radios are rather obvious and are considered illegal from the get-go. What are commonly called "export" radios are pretty easy to ID; Rangers, Galaxies, Tristars, Connexes, certain Presidents etc. If a radio-savvy cop (I know 2 that are hams) spots one of these brand-names on the faceplate of your radio, he would probably have probable cause. Same thing goes if you have a big finned box sitting on your tranny hump that says "Texas Star" on the front of it. Have never heard of a cop actually enforcing FCC laws, and it might not even be within their jurisdiction, but it wouldn't surprise me if they did have the legal authority.

192. ALERT: Official Position - incorrect - but what can you expect from these people

I hit the damn ceiling on this one. The next Pres. gets to select 4 Supreme court justices. Who do you want that to be? Someone who _reads_ the Constitution, or someone that _interprets_ it to mean what they want.
We had all better vote the right way and pray Al gore doesn't get elected. Let's get everyone, tell everyone, register everyone and "inform" everyone we know. This can't stand.
Of course it amazing how they twist the words and intent of the founding fathers. For ever court decision they cited there are 3 that go the other way. besides I don't think all of those decisions went that way and I'll damn sure be looking them up in the future. READ ON.
ALERT
9/5/00

CLINTON-GORE-RENO JUSTICE DEPARTMENT CONFIRMS
ITS OFFICIAL POSITION: INDIVIDUAL LAW-ABIDING CITIZENS
HAVE NO RIGHT TO KEEP AND BEAR ARMS!

What follows on the next page of this Special FAX Alert is the text of a letter from the Department of Justice to an NRA member. The letter is also posted on www.NRAILA.org.

The letter confirms what we reported in a previous FAX Alert (No. 24, June 16) -- that the Clinton-Gore-Reno Justice Department stands by its contention that law-abiding individual Americans have NO Right to Keep and Bear Arms!

This letter should serve as a stark reminder to all gun owners why this year’s elections are so critical to the future of the Second Amendment.

On Friday, you will receive a "Grassroots Election Action FAX Alert" that will outline the steps you must take in the coming weeks and months to ensure we can replace elected officials and government-appointed bureaucrats who view the Second Amendment with such hostility.

We hope you will share this letter with your family, friends, and fellow firearm owners and use it to ensure that all of our supporters are fully engaged in this year’s elections.

U. S. Department of Justice

Office of the Solicitor General

Solicitor GeneralWashington, D.C. 20530
August 22, 2000

Dear Mr. (Name Deleted):

Thank you for your letter dated August 11, 2000, in which you question certain statements you understand to have been made by an attorney for the United States during oral argument before the Fifth Circuit in United States v. Emerson. Your letter states that the attorney indicated that the United States believes "that it could 'take guns away from the public,' and 'restrict ownership of rifles, pistols and shotguns from all people.'" You ask whether the response of the attorney for the United States accurately reflects the position of the Department of Justice and whether it is indeed the government's position "that the Second Amendment of the Constitution does not extend to the people as an individual right."

I was not present at the oral argument you reference, and I have been informed that the court of appeals will not make the transcript or tape of the argument available to the public (or to the Department of Justice). I am informed, however, that counsel for the United States in United States v. Emerson, Assistant United States Attorney William Mateja, did indeed take the position that the Second Amendment does not extend an individual right to keep and bear arms.

That position is consistent with the view of the Amendment taken both by the federal appellate courts and successive Administrations. More specifically, the Supreme Court and eight United States Courts of Appeals have considered the scope of the Second Amendment and have uniformly rejected arguments that it extends firearms rights to individuals independent of the collective need to ensure a well-regulated militia. See United States v. Miller, 307 U.S. 174 (1939) (the "obvious purpose" of the Second Amendment was to effectuate Congress's power to "call forth the Militia to execute the Laws of the Union," not to provide an individual right to bear arms contrary to federal law"); Cases v. United States, 131 F.2d 916, 921 (1st Cir. 1942) ("The right to keep and bear arms is not a right conferred upon the people by the federal constitution."); Eckert v. City of Philadelphia, 477 F.2d 610 (3rd Cir. 1973) ("It must be remembered that the right to keep and bear arms is not a right given by the United States Constitution."); United States v. Johnson, 497 F.2d 548, 550 (4th Cir. 1974); United States v. Warin, 530 F.2d 103, 106-07 (6th Cir. 1976) ("We conclude that the defendant has no private right to keep and bear arms under the Second Amendment."); Stevens v. United States, 440 F.2d 144, 149 (6th Cir. 1971) ("There can be no serious claim to any express constitutional right of an individual to possess a firearm."); Ouilici v. Village of Morton Grove, 695 F.2d 261, 270 (7th Cir. 1982) ("The right to keep and bear handguns is not guaranteed by the second amendment."); United States v. Hale, 978 F.2d 1016, 1019 (8th Cir. 1992) ("The rule emerging from Miller is that, absent a showing that the possession of a certain weapon has some relationship to the preservation or efficiency of regulated militia, the Second Amendment does not guarantee the right to possess the weapon."); United States v. Tomlin, 454 F.2d 176 (9th Cir. 1972); United States v. Swinton, 521 F.2d 1255, 1259 (10th Cir. 1975) ("There is no absolute constitutional right of an individual to possess a firearm.").

Thus, rather than holding that the Second Amendment protects individual firearms rights, these courts have uniformly held that it precludes only federal attempts to disarm, abolish, or disable the ability to call up the organized state militia. Similarly, almost three decades ago, the Department of Justice's Office of Legal Counsel explained:

The language of the Second Amendment, when it was first presented to the Congress, makes it quite clear that it was the right of the States to maintain a militia that was being preserved, not the rights of an individual to own a gun…[and] [there is no indication that Congress altered its purpose to protect state militias, not individual gun ownership [upon consideration of the Amendment] . . . . Courts…have viewed the Second Amendment as limited to the militia and have held that it does not create a personal right to own or use a gun . . . . In light of the constitutional history, it must be considered as settled that there is no personal constitutional right, under the Second Amendment, to own or to use a gun.

Letter from Mary C. Lawton, Deputy Assistant Attorney General, Office of Legal Counsel, to George Bush, Chairman, Republican National Committee (July 19, 1973) (citing, inter alia, Presser v. Illinois, 116 U.S. 252 (1886), and United States v. Miller, 307 U.S. 174 (1939)). See also, e.g., Federal Firearms Act, Hearings before the Subcommittee to Investigate Juvenile Delinquency of the Committee on the Judiciary, United States Senate 41 (1965) (Statement of Attorney General Katzenbach) ("With respect to the second amendment, the Supreme Court of the United States long ago made it clear that the amendment did not guarantee to any individuals the right to bear arms.").

I hope this answers your question. Thank you again for writing.

Yours sincerely,

Seth P. Waxman

Your comments about K5BLB are rather dated. He hasn't been on the
air for months. And, although he does have racial views, he is willing
to live and let live and does not make racism the focus of his life.

So.. having a radio in your possession that MAY be converted to out of channel
operations (See Copper for videos) is probable cause for confiscation of that
radio? Humm.. anyone see any parallels with certain black rifles?

So.. lets say, that your President Grant is sitting on channel 15, no mods
turned on.. and the savey cop flips the mod switch etc and then transmits off
band... is he guilty of a crime, or are you? Having the capability is not the
same as committing a crime..right? Any one want to open that can of worms?
(full auto sears/ parts in possetion notwithstanding..we know the misuse of
that system already).

Now.. if I have a footwarmer on the tranny, but the only feature running is
the recieve pre-amp.. and when I key..its only 4 watts RMS.. have I committed
a crime? (my ah..er..hum..footwarmer is not in plain sight...btw)

I have been a ham (ex-K8LJS) and have been around CB long enough to still
have my CB license on the wall at home (KOR5625)

Sounds to me like someone is wanting to open up a big can of worms with this
situation, once again....

Snip:Having the capability is not the
same as committing a crime..right? Any one want to open that can of worms?

I read a FCC statute that if you just have in your possession a amplifier or
transmitter it shall be presumed it is for use.
If you are a jerk shouting "Hello Skipland" on 29.100 you deserve to be
busted but this post is not about Illegal operation in the amateur bands.
Radio operation is a privilege just like driving.....Not a right.
I know it sound like B.S but it sounds like enough to cause much of misery
with the legal system "ask anyone who's been accused of DWI" trying to prove
innocence or why you should have your Illegal stuff back.
"Mission accomplished for some square miserable bastard with nothing else to
do "
NOTE: I am 99 % positive I read it correctly, it was hard to find and almost
hidden.

No, but a little effort would probably show that he's part of a
"multi jurisdictional task force", easy enough to arrange, so
now each local jurisdiction essentially expands it powers of
probable cause ten fold and the revenue just flows in.

Burglar tools in the trunk? Execution on circumstantial evidence?
Paid informers? The lawyers have been working hard Gunner. There's
little that they can't use to make a case for most anything.

Of course not but that won't stop them from putting you in a cell
with an informer who will then swear that you told him that you
were planning to blow up some school.

Damn that does go back. Circa 1968 or something like that.

None of these relate to crimes anyway but regulations. And
if you are not a licensee of these regulators, then...?

...As a matter of fact, yes... (you mentioned you're ex-K8LJS) According to
FCC regs, the mere possession by a non-ham of an 11 meter-capable amp is
illegal, whether in use or not. The argument that it's not in use will fall
on deaf ears. (wouldn't that kind'a be like saying, "..Sure officer, I've
got a pound of pot, but honest! I wasn't gonna smoke it or sell it!")

...As a licensed amateur, you can legally own an 11 meter-capable amp as per
FCC regs..... although, having it hooked up to a CB would indeed open a
whole new can of worms for you with the FCC were your station to be
inspected.

The requirement for licensing was dropped from the regulations for Citizen's Band... FCC regulation was not. Marine VHF communications recently underwent somewhat the same process (license no longer required for pleasure boats under 60').

Unfortunatly, Susan
It seems that a small group of people have nothing better to do with their time than take their childish squabbles and temper tantrums from the radio to the internet. And they believe the rest of us really give a damn about it.
Yes, there are friendly folks on here. We just keep quiet until we really have something usefull to post.

I saw a reply to my last post at home that I was planning on replying to
from work, but I don't see it here.

When I was referring to the "export" radios, I wasn't talking about
modded or modifiable radios, but certain types or brands that did just
not have type acceptance by the FCC and so had been declared illegal
based on the brand-name. Radios like Galaxies (I loved my Saturn),
Connexes, Rangers etc are not even legal to posess without a ham
license, and I've heard that they're outlawing them altogether as few
hams use them for their legal purpose. Comparing a modded/modifiable CB
(I think the Grant might be on the list of banned radios also) to an
export CB is sort of like the difference between an AR-15 and an M-60
for hunting. One may or may not be legal according to the mods done to
it, while the other is almost a sure bet to land you in jail, even if it
was just the deputy sheriff who caught you with it. BTW, if modifiable
was the criteria they used, then almost any radio on the market would be
illegal as they can all be modded in some way or another that would
render them capable of illegal transmissions.

In return for not requiring proof of radio theory knowledge or the morse
code (required by international treaty) by taking a licensing test, the
radios that are allowed in 11-meter band are strictly regulated (not

necessarily enforced) and certified to prevent interference or safety hazards. I am not endorsing or defending these laws (I got interested in ham radio through SSB on the high channels myself), just explaining my earlier statements about outlaw CBs.

I do think that anyone experimenting with modded CBs should at the very least take the time to educate themselves to the problems they might cause and the potential hazards involved, and understand that what they are doing is illegal. Once someone understands that, the consequences are based on their decisions.

I wonder if some of these truckers really think it is such a good idea to pump 800 watts into a mirror-mounted firestick a couple of feet from their head/eyes after showing their buddies how their little footwarmer will light up a lightbulb when they key down?

ALERT
9/5/00

CLINTON-GORE-RENO JUSTICE DEPARTMENT CONFIRMS
ITS OFFICIAL POSITION: INDIVIDUAL LAW-ABIDING CITIZENS
HAVE NO RIGHT TO KEEP AND BEAR ARMS!

What follows on the next page of this Special FAX Alert is the
text of a letter from the Department of Justice to an NRA member. The
letter is also posted on www.NRAILA.org.

The letter confirms what we reported in a previous FAX Alert (No.
24, June 16) -- that the Clinton-Gore-Reno Justice Department stands by
its contention that law-abiding individual Americans have NO Right to Keep
and Bear Arms!

This letter should serve as a stark reminder to all gun owners why
this year’s elections are so critical to the future of the Second
Amendment.

On Friday, you will receive a "Grassroots Election Action FAX
Alert" that will outline the steps you must take in the coming weeks and
months to ensure we can replace elected officials and government-appointed

bureaucrats who view the Second Amendment with such hostility.

We hope you will share this letter with your family, friends, and fellow firearm owners and use it to ensure that all of our supporters are fully engaged in this year's elections.

U. S. Department of Justice

Office of the Solicitor General

Solicitor GeneralWashington, D.C. 20530
August 22, 2000

Dear Mr. (Name Deleted):

Thank you for your letter dated August 11, 2000, in which you question certain statements you understand to have been made by an attorney for the United States during oral argument before the Fifth Circuit in United States v. Emerson. Your letter states that the attorney indicated that the United States believes "that it could 'take guns away from the public,' and 'restrict ownership of rifles, pistols and shotguns from all people.'" You ask whether the response of the attorney for the United States accurately reflects the position of the Department of Justice and whether it is indeed the government's position "that the Second Amendment of the Constitution does not extend to the people as an individual right."

I was not present at the oral argument you reference, and I have been informed that the court of appeals will not make the transcript or tape of the argument available to the public (or to the Department of Justice). I am informed, however, that counsel for the United States in United States v. Emerson, Assistant United States Attorney William Mateja, did indeed take the position that the Second Amendment does not extend an individual right to keep and bear arms.

That position is consistent with the view of the Amendment taken both by the federal appellate courts and successive Administrations. More specifically, the Supreme Court and eight United States Courts of Appeals have considered the scope of the Second Amendment and have uniformly rejected arguments that it extends firearms rights to individuals independent of the collective need to ensure a well-regulated militia. See United States v. Miller, 307 U.S. 174 (1939) (the "obvious purpose" of the Second Amendment was to effectuate Congress's power to "call forth the Militia to execute the Laws of the Union," not to provide an individual right to bear arms contrary to federal law"); Cases v. United States, 131 F.2d 916, 921 (1st Cir. 1942) ("The right to keep and bear arms is not a right conferred upon the people by the federal constitution."); Eckert v. City of Philadelphia, 477 F.2d 610 (3rd Cir. 1973) ("It must be remembered that the right to keep and bear arms is not a right given by the United States Constitution."); United States v. Johnson, 497 F.2d 548, 550 (4th Cir. 1974); United States v. Warin, 530 F.2d 103, 106-07 (6th Cir. 1976) ("We conclude that the defendant has no private right to keep and bear arms under the Second Amendment."); Stevens v. United States, 440 F.2d

144, 149 (6th Cir. 1971) ("There can be no serious claim to any express constitutional right of an individual to possess a firearm."); Ouilici v. Village of Morton Grove, 695 F.2d 261, 270 (7th Cir. 1982) ("The right to keep and bear handguns is not guaranteed by the second amendment."); United States v. Hale, 978 F.2d 1016, 1019 (8th Cir. 1992) ("The rule emerging from Miller is that, absent a showing that the possession of a certain weapon has some relationship to the preservation or efficiency of regulated militia, the Second Amendment does not guarantee the right to possess the weapon."); United States v. Tomlin, 454 F.2d 176 (9th Cir. 1972); United States v. Swinton, 521 F.2d 1255, 1259 (10th Cir. 1975) ("There is no absolute constitutional right of an individual to possess a firearm.").

Thus, rather than holding that the Second Amendment protects individual firearms rights, these courts have uniformly held that it precludes only federal attempts to disarm, abolish, or disable the ability to call up the organized state militia. Similarly, almost three decades ago, the Department of Justice's Office of Legal Counsel explained:

The language of the Second Amendment, when it was first presented to the Congress, makes it quite clear that it was the right of the States to maintain a militia that was being preserved, not the rights of an individual to own a gun…[and] [there is no indication that Congress altered its purpose to protect state militias, not individual gun ownership [upon consideration of the Amendment] . . . . Courts…have viewed the Second Amendment as limited to the militia and have held that it does not create a personal right to own or use a gun . . . . In light of the constitutional history, it must be considered as settled that there is no personal constitutional right, under the Second Amendment, to own or to use a gun.

Letter from Mary C. Lawton, Deputy Assistant Attorney General, Office of Legal Counsel, to George Bush, Chairman, Republican National Committee (July 19, 1973) (citing, inter alia, Presser v. Illinois, 116 U.S. 252 (1886), and United States v. Miller, 307 U.S. 174 (1939)). See also, e.g., Federal Firearms Act, Hearings before the Subcommittee to Investigate Juvenile Delinquency of the Committee on the Judiciary, United States Senate 41 (1965) (Statement of Attorney General Katzenbach) ("With respect to the second amendment, the Supreme Court of the United States long ago made it clear that the amendment did not guarantee to any individuals the right to bear arms.").

I hope this answers your question. Thank you again for writing.

Yours sincerely,

Seth P. Waxman

Only if there was a law in the US Code or a state law outlawing
possession of a ham radio by a non-licensed person. The comparison
isn't valid if no such law exists, since there is a law against
possession of pot.

(snip)

It's sort of like a person violating a part of the UCMJ while they
aren't in the military. The UCMJ only applies to military personnel.

========
There is a 2 year grace period. For forms See URL:
http://www.arrl.org/fcc/forms.html
Several ways to submit there.
Don't know which is best.

Be aware of the new "The Universal Licensing System". See URL

Several participants in this thread have their laws, rules and regulations, and levels of authority and jurisdiction mixed up.

CB - no individual or station license required, but technical regulations are still in force and apply to anyone within the FCC's area of jurisdiction (USA and territories).

This means that possession of an external RF power amplifier ("linear" - although that is only one kind of amplification and is the main type used for AM mode) that is designed or adjusted to work in the CB band is NOT PERMITTED FOR ANYONE in the above-mentioned areas. If you are a ham and have an 11-meter "footwarmer" and it is tuned to be maximally efficient in the 11-meter band, you are in violation. However, if your originally-11-meter amplifier is tuned to 10 meters or some other band, there is no apparent violation for a licensed ham operator. (The FCC might still ask for some form of certification or proof that the amplifier cannot be operated on 10 meters.)

FCC has authority to regulate radios and their use all over the United States and its possessions and territories. It doesn't matter if any individual is licensed or not; the regs apply to everyone. If you're unlicensed, transmitting is prohibited. If you're licensed, the other regulations regarding proper operation and technical specs apply to you.

Local police departments do not have jurisdiction to enforce FCC regulations. That is a Federal function, usually carried out by (depending on circumstances) the FCC itself, the FBI, and/or the United States Marshalls. A knowledgeable police officer may bring your unauthorized radio to the FCC or DOJ's attention, but he may not make an arrest or confiscate the equipment UNLESS there is a violation of some other statute that is within his power to enforce. If the officer knows that much about radio, she should also know all about the jurisdictional issues.

In the case of an 11 meter amplifier, a local officer could charge you with a relevant motor vehicle equipment violation if such regulation exists. If your radio transmissions are causing interference with audio or radio equipment belonging to someone else, you could be charged with some sort of "disturbing the peace" or "disorderly conduct" offense. Naturally, if you fail to cooperate fully with the officer to the extent required by law under the circumstances of your encounter, you can be charged with disorderly conduct or even some form of obstruction of justice regardless of jurisdiction on any radio issues.

So, in short, while the police do not have jurisdiction over your CB radio, it will not be productive to rub their noses in the fact.

An amp is not a radio. It is illegal for non hams to posses an amp capable of being used on 11 meters and having one will lose you both the amp and your radio if you get caught. The radios he is talking about are also illegal in the US. Not because the may or may not be modified, but because they are not type accepted by the FCC for sale/use in the US.

226. 756pro, which amp?

I'm ready to add an amp to my station and looking for some advice. I've had a couple of SB-220's in the past and would like to get another one if it would work well with my 756pro? If not the SB-220, what used amp would you folks suggest? I want something over a KW. Also, I understand I would need an external relay between the SB-220 and the 756pro, but what about the ALC connection? Will the ALC still work between these two?

As always, I appreciate any advice,

David, K4ZZR

Well doc I have to agree with you. The liberal socialist dumocrats want to tear down the foundations of this country. the socialist democrats really do have a problem drawing a line between right and wrong. For example, just one, there are many more. They (socialist dumocrats) are against capital punishment of criminals (i.e., the death sentence) but yet they are for - abortion on demand. They think it's ok for homos to teach your kids about their abhorant behavior, but, it's not ok to teach them about creation.
the socialist dumocrats think that it's ok to attack the second provision in the "Bill of Rights" as long as they are protected by the First.
They just don't know anymore where to draw the line. they'll do, say or spend anything to get that vote.
Don't fall for it.

Al Gore Reasons.

David... forget the ALC for two reasons. First, you can't overdrive the SB-220 with 100 watts. Second the ALC on the SB-220 uses the input power to develop feedback, it really should be using the output signal. I recommend a relay to switch the amp to prevent a weld up of the relay on the 756pro.

No disagreement, Jim. Actually, I feel rather lucky (especially when I hear others complain about interference between devices). I'm sitting in a corner of the living room with a radio, two networked laptops, a networked laser printer, a phone system, two midi keyboards, and a pile of other electronic devices. And so far, none of them seem to interfere with the others - no interference with the network from the radio and no noise on the radio from the other devices. Its easy, in a situation like this, to forget that this stuff is throwing out a pile of RF.

But, as far as "Unclaimed Mysteries" is concerned, changing the weather with this stuff is the least of my worries.

KK7HO wrote:
>
> Of course it amazing how they twist the words and intent of the founding
> fathers.

Look, everybody, I have to agree with this. The first ten amendments to the Constitution are all directed towards individual rights (thats why they're call the "Bill of Rights").

The first amendment covers freedom of speech and religion. The third covers homeowner rights. The forth covers unreasonable search and seizure. The fifth, sixth, and seventh, covers individual rights during trials. The eighth covers bail and fines. And finally, the ninth and tenth limits the government from taking away other rights from the people.

None of these things (religion, home ownership, bail, fines, etc) are issues concerning the "state." These are individual issues - issues concerning the "people."

Therefore, it is wrong to take one of these amendments out of context to claim that it is not about the individual. It is absurd to say that, while all those other amendments are about individual rights, this one is not - it is about the "states."

The first ten amendments (the so-called "Bill of Rights") are, in my opinion, the most valuable aspects of our Constitution. These amendments establish, in writing, rights that cannot be taken away from the people by the government. Freedon of Speech. Freedom of Religion. And, yes, the right to own guns.

And, if we allow one, even one, of those amendments to be eroded, then all of our rights under those ten amendments are threatened. In other words, if the government can take away one of those rights, it can take away any of those rights. No right is safe if the government controls those rights instead of the people.

And perhaps that is why the second amendment really exists. Our forefathers knew that no matter how powerful the government becomes, no matter how powerful the military, they cannot take rights away from 50-60 million armed citizens. In other words, it is those armed citizens that keep petty dictators, and general government abuse, out of our government in Washington.

And, that is why this country is so different from those countries with petty dictators, military regimes, and self-serving royal families.

This is America, where the people have rights. Rights that the people have a right to protect - with force if necessary.

Pot is illegal under nearly all circumstances, not so for linears, and as it has a dual purpose, that of recieve preamp..... your comparison is poor.

Now, the original thread indicated average everyday cops were using a CB/Ham etc antenna as probable cause to stop and search... the posession of which is a legal enterprise.. so they are using a legal antennna as probable cause to search for illegal items..see anything wrong with this picture? Not to mention curbside confistication of legal (unless the cop is qualified to pronounce said radio is illegal..and considering most dont know dick about radios...) there is a major problem here.

Although it's not illegal to make mods, etc. to a radio, it is illegal to use them (ex. a tech-class ham can have a HF radio as long as they don't transmit on it). But when your talking amps for 11 meters, that's different. 11meter amps aren't legal in anycase, so there's no reason to have one at all (making them illegal). But in the same token, if you modify a radio to transmit on a frequency that you won't possibly ever use, there's no reason to have it (making it illegal....)

Before there were rigs like the ICOM 706 series and the Yaesu 847, how did most people operate CW and SSB on 6m, 2m, and 70cm? Transverters? Modified HF rigs? Homebrewed rigs? Anything else?

Hello, i was looking at the no-code Gorden West Study Materials that are for sale at Radio Shack. I was told by a local radio operator that these study guides were not updated to reflect the new rules changes that took effect April 15th.

Is this correct? If i buy these study materials will they have the correct Q&A's to pass the tests as they are now? Thank you

> American Phenolic Corp.

Amphenol.

> American Radio Relay League
> American Television & Radio Co.
> Amperex Electronic Corp.
> Ashe Radio Co.
> Barker and Williamson, Inc.
> Belden Manufacturing

still them.

> Bliley Electric Co.
> Bud Radio, Inc.
> Burstein-Applebee Co.
> Cameradio Co., Inc.
> Candler System Co.
> Cannon Electric Co.
> Centralab
> Collins Radio Co.

Rockwell Collins. http://www.collins.rockwell.com
Plants all over the place (Cedar Rapids, Dallas, Melbourne FL, Pomona,
Mexicali, etc.) , recently acquired Sony Trans-Com.

> Concord Radio
> Cornell-Dubilier Electric Corp.

> Dale Electronics Distributors
> Eitel-McCullough, Inc.
> Eldico of New York, Inc.
> Electric Soldering Iron Co., Inc.
> Electronic Instrument Co., Inc.
> Electrons, Inc.
> Electro-Voice, Inc.
> Erie Resistor Corp.
> Federated Purchaser, Inc.
> Fort Orange Radio Distributing Co.
> Freed Transformer Co.
> Gates Radio Co.

Harris Corporation.

> General Electric Co.
> Hallicrafters Co., The

was acquired by Northrop. last known location was Miami, FL.

> Hammarlund Mfg. Co., The
> Harrison Radio Corp.
> Harvey Radio Co.
> Harvey-Wells Electronics, Inc.
> Heath Co., The

around, but just a marketer of training materials last i saw anything from
them.

> Henry Radio Stores
> Hudson Radio & Television Corp.
> Hughes Research & Development Labs
> Illinois Condenser Co.
> Instructograph Co.
> Insuline Corporation of America
> International Rectifier Corp.

IR's still with us.

> International Resistence Co.
> Johnson Co, E.F.

I believe Johnson is still with us also.

> Kenyon Transformer Co., Inc.
> Kieruff Electronics, Inc.
> Knights Company, The James
> LaPointe-Plascomold corp.
> Macmillan Co., The
> Mallory & Co., Inc., P.R.
> Master Mobile Mounts, Inc.
> McElroy Manufacturing Co.
> Measurments Corp.

> Merit Transformer Corp.
> Midland Manufacturing Co., Inc.
> Millen Manufacturing Co, Inc., The James
> National Co., Inc.

Liquidated not too long ago - there were several articles on this and how
the company continued to hold on for years after they were gone from the
amateur scene.

> Newark Electric Co.
> Ohmite Manufacturing Co.
> Par -Metal Products Corp.
> Precise Measurments Co.
> Precision Apparatus Co. Inc.
> Radio Corporation of America

RCA acquired by GE, then broken up. GE kept NBC, RCA Records went to
Bertlesmann Music Group (Arista Records). RCA Consumer Electronics went with
GE's similar products to Thompson. Some other appliance stuff ended up in
the hands of Black and Decker and others. It appears you can still get RCA
kitchen appliances as well.

RCA Semiconductor combined with GE/Intersil and sold to Harris Corporation.
Harris recently spun off Harris Semiconductor and they took the name
Intersil (http://www.intersil.com, i believe)

> Radio Products Sales, Inc.
> Radio Shack Corp.

still with us.

Check the dates and the contents. The way to bet with printed matter is that it's out of date.

a couple of give aways that they're out of date:

1) no commentary on RF exposure guidelines.

2) they talk about having technician plus, advanced and novice licenses as currently available. (this is changed as of 4/15/00).

3) they talk about 13 and 20 WPM code speed examinations.

Well,

I wasn't all that long ago but I remember when a great VHF/UHF station had a rig for each band. I had a IC-575H for 6m (it did 10m also) and Icom made similar rigs for 2m, 220MHz, 440MHz and 1.2 gHz, too. Before that I had a FT-290 for 2m which drove a Mirage brick amp. I'm sure many built transverters, too. Basically you had One HF rig and many tranverters or many band specific rigs that each drove it's own amplifier. Bad side, too many mics. Good side, they were all on at once and if one part broke everything else still worked. Besides, the shack looked a lot more impressive to the uninformed.

www.qrz.com/download/mods-i-k/ic207h.txt

Anyone seen this? Isn't it somewhat illegal?...

The same (tho altered slightly) text-file at www.mods.dk/
has this at the end...
"The Transmitter will work and transmit at ALL of the listed TX freqs. and
the power seems to be fairly broad banded and can handle it... I now use my
mobils as Ham AND GMRS. One less piece to lug around!"...

David,
I would use an external relay for keying an SB-220. As to
another amplifier that is the equivalent, try an AL-80A or 'B'.
Shouldn't need an external relay with that one, about the same
output, and don't really need the 'ALC' on either.
'Doc

Yeah, having been pulled over a couple of times for that very reason, I do see a problem. What I don't see is the funding to mount a major legal challenge to the police practice of profiling possible drug courier or escort vehicles based on the amount of visible radio antennas on the car. This profiling is a fact, it has even been discussed on the TV news in Okla. City as part of the multi-county drug task force. The ACLU isn't interested in profiling unless it involves a racial minority. As for searching for illegal items, it's a Catch-22 deal. An honest citizen wouldn't object (in theory, and in their eyes) to a request to search, so if you object, they detain you until a dog is brought to the scene. Even if you are clean, you'd still loose that time waiting. While I'm a major supporter of local and area law enforcement, I make an exception for the drug taskforce people. They are too over-the-top regarding drug interdiction.

John,

I used Print Shop Deluxe for a recent Special Event our club had. You can design a really good certificate plus you can create a file with the calling station's name, callsign, frequency, RST, etc and merge this list with the certificate so each one will be printed with the necessary information instead of having to fill it in by hand. It looks so much better that way.

I would be willing to bet someone in your club already has the program. If you can use a color printer, they will look even better!

Linears are illegal for CBers under all circumstances. If you want a
legal pre-amp, then use a pre-amp.

I would agree with you on that, and hope that you didn't think
otherwise. I'm curious if the ARRL has seen enough of a problem from
this to have said anything about it? I can guarantee that if the cops
started showing a pattern based on stopping people due to funny
antennas, the ARRL would make the NRA look like the PTA.

According to their CB-related regs, the FCC presumes that if you posess
a certain piece of equipment, you will use it, thereby making amps
illegal for CBers to own. Now where I get confused is with ham
equipment, as the same concepts do not seem to apply there. I wonder if
by some chance you were caught with an 11-meter amp (posession, not
use), would claiming that you were studying for your license make a
valid defense?

Well, since we were talking about the "Bill of Rights," I guess we're talking about the people associated with it. Which means, of course, that most of the stuff you posted has little to do with the subject.

And nobody is deifying the founding fathers here - only deifying the words they wrote because we happen to think those words have served us well in the past, does serve us well today, and will serve us well in the future.

> 3. The Constitution of 1787 with some

The fact that "the courts have had to deal with them [the amendments] for a couple of centuries" has absolutely nothing to do with draftsmanship. No matter how the amendments were written, there will always be those who would challenge their meaning (especially those who would benefit from that challenge).

Has anyone experienced a problem whereby you cannot key input any freqs to the radio?

It appears the advanced function is "stuck" on.

The manual states by holding the mem key and pressing 1 for instance will set the tens option for tuning, this 1 key can be pushed without pressing the mem key.

I have measured the logic level form the mem switch and it does change logic, so it's not stuck.

Anyone have one of these, I tried a memory reset by removing the lithium battery, no difference, tried holding clear upon power up and no reset occurred. There must be another way to re-set the radio?

Well, before I got my first "modern" V/UHF rig, an FT-726 in 1984, I used separate RX and TX converters for each band. That made a total of 6 converters to cover 50, 144 and 432. In the last year or so of such operation, I began using an HF transverter as the IF and modified the various converters so that they used a common LO for each band so that they would truly transceive. Before that, I used separate HF transmitters and receivers.

The amount of haywire in the shack could and did sometimes result in funny things happening. One morning a couple of solar cycles ago, I worked a bunch of stations in the Caribbean one morning before I discovered that my 6m RX converter had no antenna connected. Received signals were much better after I connected it although they weren't bad before. I think that says something about the quality of the RF shielding on the converter. I know that it says something about the radio conditions then compared to what we have had lately.

Yes, and there will be those who wrap themselves in Civics-class litany for some pet project. You haven't lived until you get virtually identical mailings in the same post inviting you to protect the Bill of Rights with your substantial contribution -- one from the NRA, the other from the ACLU.

Dick

This topic has been debated for a long time. How'd you miss it? =)

Yes, using any modified AMATEUR gear for GMRS is illegal because the
equipment for is not type accepted for business or GMRS.

You can use modified AMATEUR gear for MARS/CAP if you're authorized.

It's against FCC regs for non-amateur-licensed persons to possess an RF
amp.... period. Whether its 11 meter only or 160-10m makes no difference.

The last time I checked, that's why we have courts.

for a couple of centuries now. While they
> protected individual citizens from the Federal Government, the states
could
> and did commit any atrocity that interested them.

Another irrelevance. The Fed Constitution has nothing to do with the internal affairs of the several States with very limited exceptions. The FedGov was not meant to be Big Brother or God. It's Federal, not unitary. The several States and their people must work out their internal problems internally or live with them. Nothing occurring on the State level is evil enough to justify invoking the greater evil of destroying a Constitutional Republic.

>
> 4. The Constitution of 1801 which eliminated the rather silly
practice of

More BS. Of course there was no "constitution of 1801." Mc is trying to show off for Mommy again.

As to the loser becoming VP, Mc is demonstrating his blindness to his elders' absolute brilliance here in ensuring internal antagonisms in the FedGov as a means of keeping it weak enough not to threaten citizens.

>
> 5. The Constitution of about 1802 when Marshall asserted the
constitutional

Again, there is no "constitution of about 1802." And Madison was wrong, and would have been slapped down from the beginning by a legislature and executive with gonads. He was a power grabber and his mischief continues to trouble us to this day. Good ol' Tom Jeff was right when he said that the C.J. has made his decision, now let's see him enforce it!

The constitution
> writers were never entirely sure how the judicial function should be

This, of course, was and is NO constitution but the beginning of the scrapping of the Constitution blatantly and in earnest by the lackeys of international finance/NWO after they had got their tool Lincoln out of the way for trying to slow their pace a bit.

> 7. The Roosevelt Revolution - both Franklin and Teddy -- which established

> Religious Right)

Done 1913, 1913, 1920, 1918 respectively, during all of which McCollum will find that NWO tool and philanderer Wilson was Pres, not Teddy R.

As to Prohibition, to anyone who has thought about it at all it was obviously a tool to aggrandize Fed power while at the same time throwing sops both to major booze producers (nailing down their support for the NWO by putting small producers out of business) and also to the "so-called religious right," duping them on the basis of their genuine and proper concern over the evils associated with alcohol abuse. It's remarkable how this latter scenario has been played out more recently with other issues.

as well as stretching the Commerce Clause beyond
> recognition.

On this point I thouroughly agree with McCollum.

Whether this is beginning to change with a Supreme Court that
> several times in the last decade has pointed out to a Republican Congress

The ones who were willing to, and actually did, sacrifice their "lives,
fortunes, and sacred honor" for principles, thus placing themselves in
that tiny but elite group throughout history who love truth above
comfort. Those who have not adopted this as the controlling factor in
their lives are not worthy to censure those who have.

The Amateur regulations are completely different.... not much comparison
between the two services. Amateur regs were deliberately designed to
encourage experimentation and exploration of radio theory.

Then their search will probably be ruled illegal in court. The courts
have decided that merely refusing permission to do a search isn't
probably cause.

We probably disagree less than you think. And it is apparent that while we may disagree on some of the interpretation, we have at least spent some time on the history. Where I get off the trolley is when the discussion becomes a recitation of the litany complete with the Mormon Tabernacle Choir in the background.

The ultimate philanderer has to be Warren Harding. He had his wife and a girlfriend in the White House and it was later discovered that the hotel where he had his Tuesday nite poker games had a tunnel to another lady's rooming house across the street. No wonder he had a coronary.

Among the Founding Fathers was one Gouverneur Morris who acquired a wooden leg after getting cut up in a rare glass window as her husband came thru the front door, nearly started a war with France by stealing the grand honcho's mistress, and came home to be sued for paternity at the age of 71.

I became interested in Amateur Radio in the late 50s. By the fall of
1961 I was up and running on 2m AM/CW. The equipment I used was a
homebrew transmitter running two 12AT7's to a single 832A. I probably
got about 10-15 watts output. I modulated it on AM with a EICO 72?
plate modulator and a JT-30 crystal microphone. I received with a
Ameco Nuvistor convertor (10 meter IF). This to a Hallicrafters SX-111
receiver. THe antenna was a 10 element yagi fed with 300 ohm twinlead,
stuck outside my second floor bedroom window (shack) and rotated
by 'Armstrong'.

I later graduated to a better antenna and added some six meter gear.
As I recall it was a Clegg 99er.

Generally SSB was not used until much later. I.E. the 70s possibly.
But I was gone to the military by then. So AM and CW was the only mode
used when I was on at first.

To answer the question; most VHF/UHF stations were homebrew and/or
modified military surplus. Like the SCR-522 transceiver. The receiver
sucked, so most just used the tx and made it work on two meters.

Surplus FT-243 crystals were used. And sometimes 're-ground' to change
the frequency. The common frequencies of 8 mc or 6 mc was the norm.
And there were a lot of surplus rocks around too.

Receiving was done with a low band receiver and a VHF/UHF Convertor.

Hope that helps.

Actually, the reason voice is widely used, and CW is not, is because people are used to voice, and are AFFRAID of learning CW.

I admit it. I use voice most of the time because I have to run 100% mobile, and any time I do CW I have to concentrate enough that I'd run myself off the road.

And then there's the power aspect. You don't need a kilowatt of juice to pump a CW signal through in most circumstances.

Plus, I've been there when the SunSpot cycle is at its flattest. CW is sometimes a god-send then.

Read part 97 as to what constitutes a LEGAL amp. You will find certain features on CB amps that make them illegal, even for Amateurs.
So called CB amps, by virtue of design, have certain things that cause them to be considered contraband in the US, and therefore are illegal for ANYONE.
Now before anyone asks, "what things?" go read part 97. Lets see if anyone figures it out.

My experience is about 5yrs older than Dan's but pretty similar. We ran converters ahead of an old HQ120 Hammarlund. 2 meter was an aircraft transmitter modified for the purpose and ran the ubiquitous 832. On six the xmtr was a Meck T60 modded beyond belief to play transverter for an old Central Electronics 10A. We were on sideband but had about 6 others to talk to. I got off about 1961 to do useful things -- like college.

The FCC states that KV4FZ "lacks the requisite character to have his ham
license renewed".
So they are banishing him from the ham bands forever. Yet the FCC has
renewed the ham
licenses of murders, rapists, drug dealers and pedofiles. No problem at
all. Ham exams are
administered to individuals in prisons across the country. Even super
hacker Kevin Mitnick retained his ham license
without a whimper from the FCC. What is so special about KV4FZ that it
required Bill Clinton to
order FCC Commissioner

Gee.. they never said anything when I ran RTTY via computer on Chan 23 many
years ago...<G>

Of course, living in the desert, in a valley not noted for its skip or even
reception charectoristics did tend to be "out of sight, out of mind".
Which is why, there are a number of mobils who do run linears on occasion,
simply to be able to call for help or even simply communicate, because of the
terrain and poor reception. Since the CB craze died 10 or more years ago, the
yahoos are mostly gone, and CB is simply another tool, rather than a
lifestyle.. they have now gotten on the net... lol

Gunner

Here it is for those who have trouble finding it.

a) No more than 1 unit of 1 model of an external RF power amplifier
capable of operation below 144 MHz may be
constructed or modified during any calendar year by an amateur operator
for use at a station without a grant of certification.
No amplifier capable of operation below 144 MHz may be constructed or
modified by a non-amateur operator without a
grant of certification from the FCC.

(b) Any external RF power amplifier or external RF power amplifier kit
(see ï¿½2.815 of the FCC Rules), manufactured,
imported or modified for use in a station or attached at any station
must be certificated for use in the amateur service in
accordance with Subpart J of Part 2 of the FCC Rules. This requirement
does not apply if one or more of the following
conditions are met:

(1) The amplifier is not capable of operation on frequencies below
144 MHz. For the purpose of this part, an

amplifier will be deemed to be incapable of operation below 144 MHz if it is not capable of being easily modified to increase its amplification characteristics below 120 MHz and either:

(i) The mean output power of the amplifier decreases, as frequency decreases from 144 MHz, to a point where 0 dB or less gain is exhibited at 120 MHz; or

(ii) The amplifier is not capable of amplifying signals below 120 MHz even for brief periods without sustaining permanent damage to its amplification circuitry.

(2) The amplifier was manufactured before April 28, 1978, and has been issued a marketing waiver by the FCC, or the amplifier was purchased before April 28, 1978, by an amateur operator for use at that amateur operator's station.

(3) The amplifier was:

(i) Constructed by the licensee, not from an external RF power amplifier kit, for use at the licensee's station; or

(ii) Modified by the licensee for use at the licensee's station.

(4) The amplifier is sold by an amateur operator to another amateur operator or to a dealer.

(5) The amplifier is purchased in used condition by an equipment dealer from an amateur operator and the amplifier is further sold to another amateur operator for use at that operator's station.

(c) Any external RF power amplifier appearing in the Commission's database as certificated for use in the amateur service may be marketed for use in the amateur service.

I can't find any mention in the part 95 rules regarding CW, neither allowing nor disallowing it. Considering that it is simply an unmodulated DSB carrier, I doubt that they could or would say anything. By the same token, even MCW is still standard AM but with a modulating tone applied, so I don't see how they could rule it illegal considering that it allowed on every other band that I can find. I remember a statement in one of my old license books that said that it was the only mode allowed on all bands as it was truly universal. It didn't specifically say the amateur bands.

Even if Herpie has a foreign callsign he somehow bought, he wouldn't be eligible for an Alien reciprocating operation permit unless he gives up his US citezenship. US citizens are not eligible under Part 97 rules. So it may be bye bye for Herpie.

Illegal to use is not the same as illegal to own.

Given the relatively few good SW receivers on the market and their pricing,
many SWLs own transceivers because they're a better deal.

Why be an irritant? The CB guys don't want to hear Morse code.

We're only talking 5 WPM these days, you know. That's a bit less than 1 character every 2 seconds.

Set the computer program up for around 18 WPM with spacing for 5 WPM and have at it. spend about 15-20 minutes every day max. keep adding letters as you master the previous set. practice real words for learning, run some random groups to see how you're really doing.

don't forget to get time on numbers and punctuation (the stuff that stopped the last few guys coming through for the test -- there's at least 1 question about call signs.)

shouldn't take you more than a month to get to 5 WPM and you didn't have to get all stressed out or bored or tired or anything. and they'll be able to grade your test with solid copy instead of having to take the "exam" portion.

Spooky! Replications of the BORG?

Star Trek SciFi Becoming Reality?

==========
http://www.point2gps.com/

Applied Digital Solutions, Inc., (ADSI) announced that its "Digital Angel" subsidiary has signed a preliminary partnership agreement with Axiom Navigation for the provision of GPS OEM modules to its proposed Digital Angel. Digital Angel is a microchip containing biosensors that can be worn close to or actually IMPLANTED within the body. The concept is to measure and store the biological parameters of the body and RELAY THIS INFORMATION INCLUDING GPS POSTION TO A CENTRAL IF THE UNIT DETECTS A MEDICAL EMERGENCY.

ADSI plans to unviel an operational prototype of Digital Angel at Ney York City in October.

Applied Digital Solutions Acquires Rights to World's First Digital Device
By: Businesswire

Wednesday, December 15, 1999

Company Press Release

Implantable in Humans - With Applications in E-business to Business Security, Health Care and Criminal Justice

PALM BEACH, Fla.--(BUSINESS WIRE)--Dec. 15, 1999-- Inserted just under the skin, with maintenance-free regenerating power supply, miniature ``Digital Angel&#65533;" has multi-billion dollar market potential Applied Digital Solutions, Inc.

(NASDAQ:ADSX - news) today announced that it has acquired the patent rights to a miniature digital transceiver -- which it has named ``Digital Angel&#65533;" -- that can be used for a variety of purposes, such as providing a tamper-proof means of identification for enhanced e-business security, locating lost or missing individuals, tracking the location of valuable property and monitoring the medical conditions of at-risk patients.

In the agreement signed last week, ADS acquired the right to develop this unique product itself for all of its applications or to sublicense the development of specific applications to other entities. A special technology group has been formed within ADS to supervise the development of the device.

The implantable transceiver sends and receives data and can be continuously tracked by GPS (Global Positioning Satellite) technology. The transceiver's power supply and actuation system are unlike anything ever created. When implanted within a body, the device is powered electromechanically through the movement of muscles, and it can be activated either by the ``wearer'' or by the monitoring facility. A novel sensation feedback feature will even allow the wearer to control the device to some degree. The ``smart'' device is also small enough to be hidden inconspicuously on or within valuable personal belongings and priceless works of art.

Commenting on Digital Angel's® many potential applications, Richard J. Sullivan, Chairman and CEO of Applied Digital Solutions, Inc. (ADS), said: ``We believe its potential for improving individual and e-business security and enhancing the quality of life for millions of people is virtually limitless. Although we're in the early developmental phase, we expect to come forward with applications in many different areas, from medical monitoring to law enforcement. However, in keeping with our core strengths in the e-business to business arena, we plan to focus our initial development efforts on the growing field of e-commerce security and user ID verification."

Sullivan added that the multi-purpose technology would enable ADS to tap into a vast global market, through licensing and other commercial arrangements, with an estimated total value in excess of $100 billion. ``The e-business to business security market alone could reach as high as $10 to $12 billion in the near future,'' Sullivan added.

ADS is actively seeking joint venture partners to help develop and market the unique technology. The company expects to create a working prototype by the end of next year.

Applied Digital Solutions, Inc. is an e-business to business solutions provider offering Internet, telecom, LAN and software services to a wide variety of businesses throughout North America. For more information, visit the Company's web site at http://www.adsx.com

Statements about the Company's future expectations, including future revenues and earnings, and all other statements in this press release other than historical facts are 'forward-looking statements' within the meaning of Section 27A of the Securities Act of 1933, Section 21E of the Securities Exchange Act of 1934, and as that term is defined in the Private Litigation Reform Act of 1995. The Company intends that such forward-looking statements involve risks and uncertainties and are subject to change at any time, and the Company's actual results could differ materially from expected results. The Company undertakes no obligation to update forward-looking statements to reflect subsequently

occurring events or circumstances.

BACKGROUND AND TECHNICAL ABSTRACT
Digital Angel®
E-Business Security, Emergency Location and Medical Monitoring

Background

On May 13, 1997, United States Patent Number 5,629,678 was granted for a ``personal tracking and recovery system,'' consisting of a miniature digital transceiver -- implantable in humans -- with a built-in, electromechanical power supply and actuation system. These features enable the device to remain implanted and functional for years without maintenance. This transceiver sends and receives data and can be continuously tracked by Global Positioning Satellite (GPS) technology.

On December 10, 1999, Applied Digital Solutions, Inc. (ADS) acquired the patent rights to this technology, which the company refers to as ``Digital Angel®.'' The agreement gives ADS the right to develop this unique product for all of its applications or to sublicense the development of specific applications to other entities. ADS is actively seeking joint venture partners to develop and market this technology. We expect to produce a prototype of the device by the end of 2000. We believe the potential global market for this device -- in all of its applications -- could exceed $100 billion.

Limitations of Competing Technologies

While a number of other tracking and monitoring technologies have been patented and marketed in the past, they are all unsuitable for the widespread tracking, recovery and identification of people due to a variety of limitations, including unwieldy size, maintenance requirements, insufficient or inconvenient power-supply and activation difficulties. For the first time in the history of location and monitoring technology, Digital Angel® overcomes these limitations.

Basic Features and Potential Uses of Digital Angel®

The Digital Angel® transceiver can be implanted just under the skin or hidden inconspicuously on or within valuable personal belongings and priceless works of art. When implanted within the human body, the transceiver is powered electromechanically through the movement of muscles. It can be activated either by the ``wearer'' or by a remote monitoring facility. The device also can monitor certain biological functions of the human body - such as heart rate - and send a distress signal to a monitoring facility when it detects a medical emergency.

Although still in the early developmental stage, we believe Digital Angel® could have an array of beneficial potential applications: provide a tamper-proof means of locating and identifying individuals for e-business and e-commerce security; locate individuals, including children, who are lost or who have been abducted; monitor the medical

conditions of at-risk patients; track and locate military, diplomatic and other essential government personnel; determine the location or the authenticity of valuable property; track the whereabouts of wilderness sports enthusiasts (mountain climbers, hikers, skiers, etc.).

About Applied Digital Solutions, Inc.

Applied Digital Solutions, Inc. is an e-business to business solutions provider offering Internet, telecom, LAN and software services to a wide variety of businesses throughout North America. ADS is led by Richard J. Sullivan, who was elected Chairman of the Board of Directors and named Chief Executive Officer in May 1993. Since assuming this role, he has spearheaded the acquisition of some 40 companies over the past five years. During his tenure as Chairman and CEO, ADS has experienced record revenue and profit growth.

My VHF experience is limited to 2M.

My first station circa 1960 was a RX converter with a couple of 6J6 to a BC-342 and a modified SCR-522 transmitter.

Later the converter was replaced with the W2AZL design using cascode 417As. I built a transmitter using a ARRL design using a pair of 6360s, one tripler, one PA. I drove a p-p 829B final with that. The high voltage and modulation was "stolen" from my Heathkit DX-100.

In about '65, I converted the transmitter to a transmitting converter by making the final 6360 a high-level mixer, driving the cathodes with a Central Electronics 10A exciter on 20M. The PA was a single 4X150.

By the early 80's the station, including antenna and tower was entirely HB with GaAs FET preamp, 8877 PA, etc. A domestic upheaval put me QRT with 40 states confirmed as well WAC.

I'm slowly rebuilding in a new location and hope to finish the WAS one of these days.

Why do we keep beating on this?

There is nothing wrong with enjoying code and there should continue to be bands set aside for it, just like we have special seasons for those who hunt with bow and arrow.

OTOH, there is nothing magic about it either. Any advantage it may have can be easily realised by software and equipment that automatically generates code as typed on a keyboard. The main reason this isn't more popular is most code "experts" have such poor fists that machines cannot copy their transmissions.

Can't we simply leave code to those who enjoy it and move on?

XAR (Xerox Amateur Radio) will be operating their annual special event station on Saturday, September 9.
The special event celebrates California's Sesquicentennial: California was admitted to the Union on September 9, 1850. Operations from Long Beach, CA will commence at 1600 UTC and end at 2200 UTC. Look for WD6CZH near 7.247, 14.247, 21.347, or 28.347 MHz.

Not with cars. All the way back to Carroll v. United States in 1925,
automobiles have been treated differently from homes and persons by the
Supreme Court. The so-called "Carroll Doctrine" has been expanded over the
years to the extent that a person in an automobile has no reasonable
expectation of privacy and very few Fourth Amendment rights, regardless of
whether they are the driver or a passenger.

My first rig was an old Harvey-Wells TBS-50D, ran an 807 in the final, 80 - 6 meters, including the 11 meter amateur band. Doubled in the final for 6.

Receiver was a homebrew converter (using 12AT7s as I recall) to a real prize -- Hammarlund HQ-129X.

In 1960, I built a dream rig: 12AT7's driving a 6360 driving pair of 6146s; used the audio section of the old Harvey-Wells as the modulator. Also had a converted 6-9 (or was it 7-9?) mhz Command/ARC-5 rig as the VFO. Receiver was a homebrew converter that used RCA Nuvistors in front end, mixer, and oscillator.

Later, built a 2-meter version of the same xmtr with an 832 in the final. Built a W2AZL converter -- which I still have today and which still holds its own.

The 6360 rig was built in a series in QST; the W2AZL converter was a mainstay in the Handbook for a long time.

The old HQ-129X made a fine IF for the converters.

AM was king for the longest time on 6 and 2, long after SSB had taken over HF.

Now I've done it -- got to head for the nearest hamfest and find me a HQ-129X.

I think the report of sailors tapping out morse code to the rescuers was a
bogus piece of info from the russians.
Probably morse code has outlived it's usefulness, I think it should simply
be considered another mode of operation in amateur radio and should not be a
qualification.

If you mean that they're afraid (one "f"), I don't think so, Robert.
The simple fact is that very few people have the time to devote to
learning code, or very few are willing to devote the time to learning code.

We live in a very busy world, with long work hours, chores, family
requirements, volunteer activities, an abundance of recreation
(television, computers, etc), and a nearly endless list of social
activities. Right or wrong, people today are simply choosing to spend
their time on other things instead of learning code. In other words,
they are not willing to take time away from those other activities to
learn code because they value those other activities more than they
value code.

So, unless the world suddenly slows down, or code increases in value
in the eyes of those people, that situation is not likely to change in
the future.

Don't read these newsgroups very often, do you, Larry? This topic has been discussed in length in the rec.radio.amateur.policy newsgroup. If you had read those discussions, you would have seen that the reports of sailers tapping code on the hull were wrong. It appears that this report was the result of someone's overactive imagination - later corrected by officials in Russia, and reported in several publications (links were given in the other newsgroup).

Nope.. you didn't miss anything... It is NOT illegal for a non-amateur to own amateur equipment, nor is an amateur license required to purchase amateur equipment.... with the exception of RF Power Amps. As the regs stipulate, you may purchase and possess (without benefit of an amateur license), but not operate same equipment except to receive.

Get them all the time, Dick. Years ago, I would read the one from the ACLU and trash the NRA advertising. Yes, I'll admit it - I was a liberal at one time. However, one day I finally realised that liberals hate, and are out to destroy anything in this country (history, culture, religion, etc) that has to do with, white male gentiles (white non-jewish males). In other words, I realised that these people are the enemy, not my friends.

So, today I trash the ACLU nonsense and occasionally actually read the NRA stuff (much more often recently).

307. This is funny Part 2

Newsgroup: rec.radio.amateur.misc
Date: 2000-09-08 04:14:33 UTC
From: rich7@my-deja.com
Message-ID: <8p9p2s$g25$1@nnrp1.deja.com>
Source record: 103759

Let me object here to your rather unremitting attempts to argue, in just
about all your enforcement cases and your cheap shot, form letter warning
notices, that §97.1 somehow gives the Commission the authority to regulate
hams' free-speech rights on the radio. This wrong-headed litany of yours,
besides having become extremely monotonous and boring to me, is just
another example of your misinterpretation of Part 97, and of how you
unfairly throw your weight around, by coming down on hams with the full
power of the federal government and the U.S. Attorney's office, on another
one of your cockamamie regulatory theories! And you do it because you
want to keep the brownshirts happy, you want to get promoted, you want to
be able to issue more press releases, and you know that hams are very
unlikely to be able to successfully challenge your actions!

Section 97.1 gives the Com-mis-sion no regulatory power vis-§-vis
free speech! It is merely the general "Basis and Purpose" section of the
Rules, and I really resent your acting as if it gives you the power to regulate
our free speech! As far as I am concerned, it just represents another
example of the federal govern-ment trying to abuse its power, throw its
weight around, and bluff the public into submission with its power. So I am
placing you on notice now that if you take me to an administrative hearing
in
this matter, another issue I am going to raise is to whom §97.1 grants
rights. My position is that it grants rights only to licensees, not the
Commission. Indeed, §97.1 forms the primary basis for my defense to your
unfounded allegations. My transmissions on 3830 were affirmatively
per-mitted by §97.1, and you don't have any regulatory power under §97.1
to tell me that they were wrong! And even if you did have such regulatory
power, the language of §97.1 is so vague that it could not constitutionally
be
applied to regulate hams' free-speech rights. Clearly under §97.113(a)

(1),
your regulatory power comes exclusively from ��97.113, not from ?97.1
You
have to have an actual Rules violation in order to prevail in
administrative
proceedings, and you just don't have one in my case. Bernard J. Winner
v.
FCC (1980) 82 FCC 2d 343 and Walter Norman Russell v. FCC (1983) PR
Docket Nos. 79-322 through 79-324.

Under your perverted enforcement theory, you can punish hams
under the general "Basis and Purpose" rubric of ?97.1, even though
there is
no Rules violation, which is totally contrary to Winner, Russell and
?97.113(a)(1)! Hams are entitled to know to what extent the Commission
can legally restrict our free-speech rights, so we can govern our speech
accordingly, and ?97.113 is the only section of Part 97 that allows you
to
do
so. And Riley, you can tell me until you're blue in the face, like
you've
told
so many other licensees to whom you've sent your cheap shot form
letters,
that I am "seriously misinformed" about the meaning of ?97.1, but I'm
telling you right now that I've already done the research and can prove
that
both the law and the legislative history of ?97.1 are against you!

In determining the free-speech rights of ham radio operators, any
court
is going to apply the specific language of ?97.113 and not the very
vague
and
general language of ?97.1. That is an elementary principle of statutory
construction as it affects citizens' free-speech rights. (I am going to
omit the
citations in this regard at this time, because I am sure you are
familiar
with
them.) Indeed, the plain language of ?97.113(a)(1) requires that there
must
be some specific prohibition against the conduct in question, not merely
some vague and generalized alleged "violation" based upon the "Basis and
Purpose" language as is found in ?97.1, before any enforcement action
will
lie on your part Do you want a court to finally and definitively
determine
that
you have no enforcement power at all under ?97.1, because I'm going to

push that issue hard if you're going to treat me so unfairly!

So, in order for any enforcement action to lie under Part 97, the act complained of must be specifically prohibited by §97.113 or some other Section of Part 97. [Again, please see §97.113(a)(1)] The problem with your case is that I committed no such act. Now you say you have some tapes of me. Send them on over! I'd really like to hear them! I've never said anything on the ham radio that I was ashamed of, Riley, so I'd be glad to have an ALJ listen to what I said and then decide whether your admitted insanity was temporary or permanent. As I've mentioned, I will put my credibility and integrity up against yours any day of the week, my friend, with no problem at all. And, let me point out to you again, my transmissions were specifically authorized by Part 97, so you are really 'way off base in issuing me a Warning Notice!

In addition to being specifically authorized by §97.1, as discussed above, my transmissions were also authorized under §97.111 as being ones necessary to exchange messages with other stations in the amateur service! In other words, my transmissions were exactly the kinds of transmissions that are envisioned as necessary and appropriate under the Rules, but you are trying to second-guess everything I've said on 3830 and punish me because you don't like the substantive content of my speech! I have absolutely no intention of tolerating that. Any attempt by you to try to force me to change frequencies, or to stop using any assigned frequency on which I have the right to operate, would constitute a content-based restriction on my free-speech rights, would be unconstitutionally vague and would therefore warrant strict scrutiny by the courts. There would also be a violation of §326, the anti-censorship provision of the Communications Act [47 USC §326 (1970)] because you would be restricting the content of amateur radio transmissions without justification, and this would give rise to a civil rights violation. I am going to pursue such an action if you don't

rescind my Warning Notice.

There is also long-standing case law, in a highly-analogous Part 95
case, that the Commission can only prohibit a certain type of conversation
over a particular frequency when the alternative would be to deny many
intended users any access to the frequency. Lafayette Radio Electronics
Corp. v. U.S. 345 F.2d 278, 280 (2nd Cir., 1965) (love that Second
Circuit!). Even a cursory analysis of the elements of the Lafayette Radio
decision demonstrates that the facts in our case militate in my favor and
against the position of your complainant: after all, if I am allowed to stay on
the frequency, everybody can use it. But if you allow your complainant to
dictate who can use the frequency, then I am totally barred from its use and
the other hams who want to talk to me cannot do so. Such a decision would
violate Lafayette Radio. Riley, you should have considered the effect of
the
Lafayette Radio case before you issued me your cheap shot Warning
Notice! Now I fear that I am going to have to raise this as another example
of your rather obvious ignorance of the law (i.e., lack of competence) or
deliberate mis-statement of the law (i.e., lack of integrity and credibility) if
we must proceed to an administrative hearing in this matter.

I'm sorry if I sound quite upset, but, Riley, you really take a lot of
cheap
shots in your Warning Notice! Really, that's what I'm starting to think you
are, a cheap shot artist but nothing more! Sir, I have done nothing to deserve
this kind of treatment! The only question at this point is, are you going
to be
a gentleman and retract your mistaken Warning Notice, or are you going to
continue taking cheap shots at me, with the full power of the federal
government behind you? You talk in my Warning Notice about my activities
allegedly "degrading the hobby". Well, I have news for you, sir: I was never
required to accept your opinions about what topics are appropriate for

discussion on amateur radio (except for obscenity and threatening criminal
acts), and I am not about to start accepting them now! In my opinion, my
judg-ment about what degrades the hobby is better than yours, thank you
very much! In my opinion, what most degrades the hobby is the really lousy
job the Commission has been doing on amateur enforcement (especially the
way you're pandering to the brownshirts), not any of my activities!

My point is that my opinion about what "degrades the hobby" is just as valid as your opinion, I simply am not required to accept your opinion on the matter; and you have no right to try to force your opinions on me under the guise of §97.1, or any other language appearing in Part 97. I am also going to go so far as to say that I am just as good a person as you are, and I have absolutely no intention of letting a career bureaucrat like yourself gratu-itous-ly insult my integrity when I am making an honest living in the private sector and am paying your salary with my taxes. I am not required to accept your judgment as to what topics are appropriate for discussion on the ham radio, nor do I want to accept your judgment on the issue.

Moreover, I should advise you that, for reasons which may be obvious to you, I am in the habit of very seldom doing that which I am not required to do and also do not wish to do. I liken it to a bicyclist choosing to ride on the road, even when a separate bike path is available to him (I'm sure you know how some motorists object to that): his use of the bike lane is optional, not mandatory. He has the right to ride on the road if he wants, and nobody has the right to tell him otherwise. Likewise, I have the right to stay on 3830 merely because I want to, and even though, as you point out, other frequencies are available for my use, and I really don't need you trying to

bullshit me by telling me otherwise because you just don't have the authority
to do so, so please save your breath! It is strictly my decision about whether
or not I want to go QSY! You don't have any violation of Part 97 that you
can prove because none exists, so you try to score public relations brownie
points by calling me names instead. You really ought to be ashamed of
treating a taxpayer this way, but you probably won't be. You owe me an
apology for this embar-ras-sment! I find your statements about what you
think are acceptable topics of conversation on the ham radio to be extremely
fatuous, since you lack entirely the enforcement power to effectuate them,
and your ventilations in that regard really amount to nothing more than
attempting to throw your weight around, play to the brownshirts, and wait
for
someone like me to call your bluff. Well, I guess someone has. Have you
ever heard about the piss ant who crawled up an elephant's leg with rape on
his mind? Well, I'm the elephant and you're the ant! I mean really, Riley,
I
find your opinions about what is proper conduct on the ham radio (assuming
no other violation of &#65533;97.113) rather boring and unconvincing, and I am
really not interested in them in the slightest, nor am I required to display
any
interest in them, so please don't try to convince me that you have the right
to
tell me what I can say and what frequency I can choose, because you
don't! In fact, you sound like something of a dweeb to me, and I therefore
think I wouldn't even enjoy talking to you on the radio very much, so please
don't presume to tell me how to talk to my fellow amateurs!

Do you know what else I find very fatuous about your Warning Notice,
and about our subsequent telephone conversation? The way you make the
facile assumption that your complainant is right in saying that nobody else
wants me on the frequency. I am not going to bore you in this letter with
the
details about why he's wrong about that, but I will say that (as

usual?) you
just don't know what you're talking about! If we go to a hearing
before an
ALJ, I am going to put on a lot of testi-mony about this issue, since
this
seems to be the most important question in your mind and, again, I know
a
lot more about the facts on this issue than you do, and you're going to
lose
because your complainant is giving you the wrong infor-mation! In short,
my position will be that your complainant is wrong and self-serving, and
your conclusion that everyone else on frequency wants me to go away is
extremely slipshod, superficial and merely another example of your poor
enforcement work (i.e., your failure to properly analyze the pertinent
issues). In reality, there are probably 10 stations on frequency, and
only
one
of them (your complainant) wants me to go away. Why let that one
station
dictate to whom the other 9 can talk? And do you know what else? Even
if
all ten of the other amateurs on frequency wanted me to go away, I still
wouldn't be required to go! The issue of who wants me to go away and
who
doesn't is really irrelevant, since I have the right to use the
frequency
and
they do not have the legal right to tell me otherwise. Do ten licensed
drivers
have the right to tell another driver he can't use the road, just
because
they
don't like him? Of course not! He has the right to use the road,
regardless
of what the other ten drivers might desire. The exact same principle is
involved here. I am specifically licensed to use the frequency, and my
fellow
amateurs have no greater right to use it than I do. If they attempt to
run
me
off, then they're the jammers, not me! Again, Riley, you're simply on
the
wrong side of this case! You should be supporting me!

While we're on the subject of "facile and fatuous", I must say
that I
am
also really offended by your rather obvious attempt to lump together my
transmis-sions on 3820 and 3830 as somehow being identical in nature, or
as constituting some sort of pattern of bad conduct. Again, you just

don't
know what you're talking about! I will win on the facts at a hearing on
this
issue because both situations were entirely different, and I know how
they
were different and you don't! Entirely different stations, times and
conversations were involved in each of the two frequencies, and your
attempt
to distort the facts and prejudice the Commis-sion against me by trying
to
lump them together as some kind of nefarious "pattern of conduct" is
certainly rather gratuitous and unappreciated by me, to say the least!
Please
rest assured that I'm not going to let you do that at a hearing!

None of the activities prohibited by §97.113 appear. There are
none
of
the usual indicia of any rules violations. This must already have
occurred
to
you. You have an extremely weak case on the face of it, since you can
point
to no specific §97.113 violation. In view of the absence of any §97.113
violation, are you trying to tell me that an ALJ is somehow going to
magically conclude that I am interfering with another station, when
neither
can you show any actual inter-ference? I don't think so! Now I fully
appreciate that you are going to try to claim that my transmissions were
conduct, not speech, but you still have the same problem: none of my
conduct violated §97.113, so the only possible reason for you to be
trying
to
hand me this load of shit is because you are trying to limit my free-
speech
rights.

You claim deliberate interference, but that is simply
impossible. I
never
interfered with anyone on your tape because I have never operated that
way. I always try to be courteous, and I always stand by to listen to
other
stations after I am done making brief comments in the roundtable QSO. I
don't engage in monologues, nor do I try to monopolize the frequency.
You
can't prove any actual interference, which is the sine qua non of
deliberate
interference, because there simply wasn't any, and I really resent your
apparent and unfair implication that you can, because I'm a good

operator! If you claim actual interference, then I want a hearing before an
ALJ over the issue, because I'm afraid your admitted insanity is indeed
permanent! I just don't have to take this kind of abuse from you, and I have
no intention of doing so! I have done nothing wrong, so who made you
God? I would be perfectly content to go to a hearing over the issue, if you
won't start thinking more clearly and back down.

Have you ever heard of the de minimis doctrine? I mean, what are you
really saying: that I somehow injured your complainant's sensibilities so
very
badly with something I said on 3830 that he has the right to bar me from the
frequency entirely as a result? (It wouldn't be the first time he has tried
to
drive other stations off the frequency, you know!) Isn't that known as the
"princess and the pea" school of Rules enforcement? If you want to play the
"princess" before the ALJ, Riley, then Gawd do I ever want to go to a
hearing! It would be worth it just to watch you make a fool of yourself,
"Princess", even if I wound up losing! I really want to see you explain to
an
ALJ what I did that was so terrible, "Prin-cess"! Just be sure to bring your
tu-tu and ballet shoes so you can appear in proper uniform,
primadonna! I'm not being facetious at all about this point, Riley. As you
know, all attorneys are required to show due and proper respect to the
courts,
and if you and the U.S. Attorney show up at the administrative hearing in
suits and ties, I am going to argue that you are attempting to seriously
mislead the ALJ by falsely attempting to appear to be attorneys and civil
servants when you are really nothing but a bunch of princesses, because the
"princess and the pea" is the entire theory of your case, and you should be
required to act accordingly! And I am going to move for a continuance on
that basis, until you guys go home and change into your princess
costumes. I'm just not going to let you mislead the court by trying to

pretend
that you're not really princesses and are instead normal people. In
fact, as
I
write this, I'm starting to think that "Princess" is really a good
nickname
for
you, Riley! Therefore, I'm going to start referring to you by that
nickname
hereafter in this Response.

Your complainant hasn't suffered any injury whatsoever! I didn't
force him to go away, as he is trying to force me to do! The remedy you
propose is entirely dispro-por-tionate to the claimed "offense", and
from
the
Senate's failure to convict Bill Clinton in the Monicagate impeachment
we
discovered that you don't impose a disproportionate punishment for
matters
which are essentially private affairs, didn't we? Since our QSO on
3830 was
a purely private conver-sation, as a good Democrat you want me to be
able
to benefit from the same principle that saved your President from
impeachment, don't you? After all, if President Clinton can repeatedly
get
blow jobs from Monica Lewinsky in the Oval Office and it is considered
purely a private matter, then certainly I can engage in a little
argu-men-tation with my fellow hams on 3830, if that is what has got
you in
such a tizzy, Princess, and it should likewise be considered to be
purely a
private matter.

And what, exactly, is the reason for your secrecy about your
so-called "monitoring evidence"? I mean, what would have been so hard
about your sending me a copy of that tape and asking for my reaction to
it,
prior to issuing your Warning Notice? You still could have sent me a
Warning Notice if I failed to adequately explain my transmissions on the
tape. Were you afraid I would contradict the tapes, so you wouldn't be
able
to jump down my throat? Do you have something to hide? Are we playing
discovery games? And now you ask me for a "complete and candid
response" to your Warning Notice, on pain of further prosecution under
§308(b) if I am not "completely candid", yet you won't even let me hear
the
tapes so I can reply to them candidly? Are you deliberately trying to
keep

me
guessing about what you have on tape so you can claim I'm not being
candid
and go after me under §308(b), or what? Why in the world would you
tell me
I have to be "candid", and then make me guess about what I'm supposed to
be candid about? That is a really shitty thing for you to do, Princess!

Another essential element of my defense to your Warning Notice is
that,
even viewed in a light most favorable to the Commission, it amounts to
nothing more than that you are complaining about your own lack of
enforcement over the last 20 years! Princess, you of all people well
know
that we hams look to the reported decisions and your warning letters for
guidance about our conduct, but for the last 20 years you have
deliberately
engaged in the rather deceitful practice of pretending or claiming to
have
enforcement powers under Part 97 that you clearly did not have, but
instead
telling hams to be self-policing! In other words, you've been
perpetuating
a
lie based upon a lie! You've been falsely telling hams that you have
enforcement powers you don't have, and then turned around and falsely
told
them that you weren't going to do any enforcement and that they had to
be
self-policing instead. You've adopted whichever of these false and
contradictory positions happened to serve your interests at the time!
You've
compounded your deliberate mis-statements over a 20-year period! You did
this because you knew damned well that you didn't have the enforcement
powers you were claiming to have, so you had to let hams solve their own
problems (i.e., be self-policing) instead. But that cop-out sure didn't
prevent you from lying about the enforcement powers you claimed you did
have! By God, Princess, that's just so despicable!

As the direct result of your failure to do your job over the last
20
years, and as the further direct result of your compounded duplicity,
as
pointed out above, hams have not had the benefit of any developing law
in
order to guide their lawful conduct under Part 97! Instead, the
Commission
has engaged in the extremely dis-in-gen-uous practice of pretending that
hams have no free speech rights under some alleged Part 97 "free speech
no-man's land" where the Commission wrong-fully claims to have the right

(usually §97.1 is cited, as discussed above) to censor amateurs' speech that doesn't otherwise violate §97.113 under the guise of "good amateur practice", while all the time the Second Circuit Court of Appeals was telling you that you didn't even have the right to regulate amateur radio at all (!) under the old Part 97, and the Commission was therefore forced to amend Part 97 in 1989 to give itself the power to enforce the Rules in the first place! Did you think nobody noticed that or something? And aren't you ashamed of yourself for continuing to work and associate with such a bunch of liars?

And ever since Part 97 was amended in 1989, you've been playing nothing but games with §97.101(b), which was first enacted in those 1989 revisions! Now §97.101(b) requires all hams to cooperate in sharing their assigned frequencies in order to make the best use of them, and further says that no ham has a preferential right to use any frequency, but in my case you're acting like §97.101(b) doesn't even exist! Your complainant simply doesn't want to share the frequency, as he is required to do under §97.101(b)! In other words, Princess, you should be on my side, not the complainant's! You are basically saying with your Warning Notice that you are going to give your complainant a preferential right to use 3830. Yet in other of your warning notices, you have relied on §97.101(b) in threatening to punish hams for doing exactly the same thing your complainant is trying to do to me (see, for example, your November 16, 1999 Warning Notice to licensee Alan Strauss, WA4JTK. There are several other similar such Warning Notices from you in the RAIN Report). Furthermore, even before the enactment of §97.101(b), the Commission revoked amateur licenses for not sharing frequencies in ways which, I believe, are highly-analogous to the way in which your complainant is refusing to share 3830. Plageman v. FCC (1984) PR Docket No. 84-531; File No. PR-2923-S and Ballinger v. FCC (1984) PR Docket Nos. 84-291and 84-292; File No. PR-2875-S. Certainly my argument, that your complainant must be required to share the frequency is, a fortiori, much stronger since §97.101(b) first took effect in 1989

than it
was at the time Plageman and Ballinger were decided, yet even the
pre-Amendment cases support my position rather than yours! You'd better
check yourself out in a major fashion, Princess! You're clearly wrong
on
the
law!

In short, Princess, when this situation was first raised with me
by
the
ham who I believe is your complainant, I carefully researched the law in
good
faith concern-ing the subject and tried to govern my actions accordingly
but,
due to apparent deliberate Commission action, I experienced great
difficulty
in ascer-tain-ing with any clarity how Part 97 governed the dispute.
First I
found your warning notices on the RAIN Report, saying that under
§97.101(b) we have to share the frequen-cies, and threatening
punishment if
the objecting station refused to share, exactly as your complainant is
doing
herein. Then I found the Plageman and Ballinger decisions and saw how
the
Commission revoked the licenses of those amateurs because they refused
to
share the frequency, even before §97.101(b) was enacted! Of course, I
really
wanted to comply with the Rules, because I value my license. Because I
was
very confused about the state of the law on this issue after seeing how
you
were playing enforcement games, I attended a meeting of my local radio
club, to which I belong, because my SCM, Jettie Hill, was going to be
speaking, and I had heard that he was something of an expert on Part
97. I
told Mr. Hill after the meeting that I was really confused about the
meaning
of §97.101(b), especially in light of your rather inconsistent
enforcement
actions, and how you appeared to be pretending that the law was
something
different than it actually is, and asked him what he thought. He said
"nobody
knows". Now with your inconsistent and non-existent enforcement, the
Plageman and Ballinger cases, the plain text of §97.101(b), the fact
that

&#65533;97.101(b) was enacted after Plageman and Ballinger, and my own SCM telling me that "nobody knows", of course I would think I had the right to stay on frequency under those circum-stances! Why would anybody in his right mind think he had to change frequency under &#65533;97.101(b), your warning notices, Plageman, Ballinger, and when even his SCM doesn't know the answer? And now you're taking exactly the opposite position! That's not fair, and it's dis-in-gen-uous, Princess, and you're trying to make me pay the price! And I don't like it! And it constitutes a full and complete defense to any enforcement action that you might bring against me! You want to have it both ways, but I don't think an ALJ is going to let you. You want to use &#65533;97.101(b) as a weapon when it suits your interests, but you want to deny its existence when, as in my case, it becomes inconvenient for you to acknowledge! And to top it all off, you're so damned arrogant and condescending about the way you do it! If you're an example of what Al Gore's "reinvented government" is going to be, then God help us! (Again, all of this goes to the issues of your competence, integrity and credibility.) You act as if nobody else can figure out the commun-ications law but you, and you try to take unfair advantage of your (allegedly) somewhat exclusive and rather extensive knowledge about the subject. Well, you messed with the wrong guy this time, Princess, because, you see, I really have nothing to lose. I'll fight it all the way out with you, if you have nothing better to do with your time. Hell, after the IRS gets through with me, I have more time than money anyway! But don't you have any worse actors than me to pursue? After speaking to you on the telephone the other day, when you told me the hobby has become nothing more than a "taping contest", and that I'd better come up with some tapes in my own defense to counter those of your complainant, I don't really care that much if I lose my license, if that's what our hobby has come to. But I don't think it has, and I value my license, so I am going to fight your Warning Notice as far as I can.

Another real joke is the way you are claiming the one-sided tapes, provided to you by some other ham with an axe to grind, constitute

"monitoring evidence". Gee, that term, "monitoring evidence", really
makes
your Warning Notice sound official and condemnatory, doesn't it? But
whom are we trying to kid here, Princess? I mean, I know it sounds very
impressive for you to claim you have "monitoring evidence" in your press
release, but monitoring evidence must be developed by the Commission,
not
another licensee! I am going to object to the introduction of your
so-called
"monitoring evidence" into evidence at any admin-istrative hearing,
Princess, on the basis that it is not relevant, not material, biased,
prejudicial,
possibly doctored (you simply don't know if was doctored because you
can't
prove the tape's chain of possession, as you are required to do at an
administrative hearing) and does not rise to the level of legal
monitoring
evidence because the Commission did not collect it. Also, your
procedure of
accepting tapes from amateurs with an axe to grind violates the Hatch
Act,
and they are therefore inadmissible on that separate ground, Princess.
As
usual, you're simply overstating your case, trying to make your job
easier
and
trying to pander to the brownshirts, but you've chosen the wrong boy to
try
to
victimize this time, Princess! If you want to develop monitoring
evidence,
develop it yourself, as you are required to do! Do your job rather than
sitting
around writing up bullshit Warning Notices!

Princess, what in the hell did you expect was going to happen
after
the
Commission failed to do its job for 20 years and then suddenly hung out
a
"blink-ing neon light", in the form of one W. Riley Hollingsworth,
announcing that "we're doing enforcement again!" Didn't you foresee
that
maybe, after 20 years of no enforcement whatsoever, maybe some snivelers
with an axe to grind would send you some one-sided tapes in an attempt
to
get rid of somebody they don't like on the ham radio? And why in the
world
would you want to side with, or believe, the licensee/taxpayer who's a
sniveler in that situation, rather than the licensee/taxpayer (me) who's

not? Are you trying to encourage sniveling or some-thing? (On second thought, I guess that's what Democrats do, after all. Then they try to get the snivelers to vote for them by promising them relief from their self-imposed problems.) But if you're not trying to encourage sniveling, then maybe you'd better take down that "blinking neon light"! Princess, I've been jammed, and hams have tried to run me off frequencies, for years! It happens to everybody at one time or another. It's just that I don't go sniveling to you every time it happens, because I'm a big boy and I can handle it myself. And I'm not going to start sniveling to you now, either. (Actually, I did try complaining to then-Engineer-In-Charge Phil Kane in San Francisco one time about being jammed. He told me to take care of it myself, because hams are supposed to be self-policing, so I never bothered complaining again.) But please rest assured that, were I so inclined, I could tell you a bigger sob story than your complainant has done! But I would never do that. I'm simply not a whiner.

And if you take me to hearing, then I'm going to argue that there is no "free speech no man's land" under Part 97; in other words, that you have no power to regulate the substantive content of hams' on-the-air speech (except for obscenity and threatened criminal acts) that does not otherwise violate Part 97, because I'm getting really tired of you wrongfully asserting this to hammer the poor licensee. But the problem with such a ruling, if I obtained one, is that neither of us would like it. (I wouldn't like it because it would mean that we don't have the right to run a drunk off the frequency until he sobers up, the very situation which, I think, gave rise to this dispute.) If I win, you won't have any power to regulate the content of hams' speech on the air. Is that really what you want? So I can either yell, "the emperor has no clothes" now, or it can await another day, and in the meantime we will see if you start taking a more even-handed, considered and judicious approach to enforcement. It's really up to you, Princess.

And I find it really disconcerting that you are supposed to be an amateur
enforcement specialist, and I am not even a communications law specialist,
although you are supposed to be one, yet clearly I either have a better
under-stand-ing of Part 97 enforcement law than you do, or else you're
deliberately dissemb-ling and pretending that the law under Part 97 is
something different than it really is, because it lets you make your job easier,
issue more self-promoting press releases and keep the brownshirts
happy. So at an administrative hearing I am basically going to require you
to
specify whether you issued my Warning Notice because you're incompetent
or because you're venal. Man, Princess, I sure wouldn't like to be presented
with a choice like that in front of an ALJ! I think a serious question
concerning your integrity is involved with respect to your overall attitude
toward enforcement. For example, why would you try to deliberately distort
the law to unsuspecting licensees?

Please retract your Warning Notice and issue a written apology to me
for issuing it in the first instance. Otherwise, I am going to assume that
you
will issue some form of official Citation or Notice of Violation concerning
the
matter. Please be advised that in the latter event I wish to take the steps
necessary for designating the case for a hearing before an ALJ. And if you
do issue an official Citation or Notice of Violation, please also send me,
at
that same time, copies of all evidence upon which you are relying to prove
same, including the so-called "monitoring evidence" that you are claiming to
have. In the meantime, I will finish reviewing the details of your expense
reports in the Federal Register. I do hope that you have found my Response
to be adequately candid, Princess, and that you have not been terribly
offended by anything I've said herein, or have found my Response to be
terribly intemperate. It's just that I am a little paranoid that, had I not
displayed the highest degree of candor in this Response, you might try

to
claim that I was thereby guilty of a separate offense under §308(b) of
the
Com-munications Act!

Thank you for considering my position in this matter.

Yours very truly,

WILLIAM F. CROWELL, N6AYJ

And even if you were trapped under a pile of rubble in a quake or tornado,
ANY type of tapping noise that could be heard would get you the help you
need. You could even beat out you own rendition of a favorite song... as
long as you could make SOME kind of noise...

I have updated the Radio Shack page today.

1. I have added a few more mod files to the webpage.
2. I have added a "Free For all Links" sections. add a link.

By messing around with Winword, I was able to make a little bit better
site. This will make it easier for your web-browsers to look at the
graphics and make it a better looking! Leave a comment at my new e-mail!

Go take a look!

W. Riley Hollingsworth, K4ZDH
Special Counsel, Enforcement Bureau
Federal Communications Commission
Gettysburg, PA 17325-7245

Re: Response to your August 21, 2000 Warning Notice concerning
Amateur Radio Station N6AYJ

Dear Mr. Hollingsworth:

Please allow this letter to serve as my written response to
your
August
21, 2000 Warning Notice concerning my amateur radio operations on
3820,
3830 and 3857 khz. Kindly also let it confirm that I did speak to
you
by
telephone on August 28, 2000 but that we could not agree in that
conversation about how to resolve the Warning Notice, so we agreed
that
I
would file this written response.

Your said Warning Notice is hereby both factually and legally
challenged.

Before I begin outlining the factual and legal deficiencies of
your
Warning Notice, let me mention a couple of preliminary matters.
First,
since
we are both apparently pretty hard-core hams, and hams are supposed
to be
friendly, I am going to write this letter on a first-name basis, and
you
may
hereafter use my first name ("Bill") in both written and oral
communications
with me, if you desire. The second thing is that I feel your Warning
Notice is
a really lousy way to treat a taxpayer! I mean, jeez, Riley, I'm
paying
your
salary! I pay a whole bunch of money in taxes, and it doesn't come
easily! I

can't really support my family the way I would like to be able to do, due to my large federal tax load, and for some reason none of your buddy Al Gore's proposed "targeted tax cuts" are targeted at me. So this Warning Notice is the thanks I get for all the taxes I pay? Riley, I must advise you that you guys in the Enforcement Bureau are really starting to look like a bunch of ingrates to me at this point!

Here's the thing, Riley: I'm a trendsetter, and a lot of people listen to my opinions. Also, my wife and kids tend to be trendsetters, too. For example, my son Ben (KB6ZD) is a college professor. (He never gets on the ham radio anymore because he thinks it's too dumb, and I'm really beginning to agree with him, after receiving your Warning Notice!) The real question is, do you want people like us to be friends or enemies of your agency, and of the federal government? Riley, your warning notice was really a dumb move, politically! It ranks right up there with the time that Bill Clinton had me audited by the IRS after I told him he should resign over his affair with Monica Lewinsky. Sure, the govern-ment made me pay some more taxes in a very unfair fashion, but at what price to public loyalty? Do you know how many people I educated about how to resist the IRS after that? Do you know how many college students heard the story from my son, and now will probably distrust the government forever as a result? Is that what you're trying to accomplish here? Did you know that two California congressmen voted in favor of impeachment, largely because I proved to them that Clinton had me audited in retaliation for urging him to resign? Doesn't the federal government have enough problems about its credibility with the public without your taking such a stupid action? So

why
are you doing things like this, Riley? In other words, do you want the
public
to be loyal to the federal government, or not? You're acting exactly
like
you
are trying to breed disloyal citizens or something! So knock it off
already!

Riley, you may remember our previous e-mail exchange, wherein I
warned you about becoming "Mr. Enforcement" and doing the bidding of the
ham radio "brownshirts", but apparently you have ignored my
correspondence because that is exactly what you're doing with my Warning
Notice! And now I see that the Com-mis-sion is still up to its old
tricks:
lying about the facts, and trying to claim it has enforcement powers it
does
not have, because you want to be able to demonstrate "instant action"
to the
brownshirts, and find it too hard and time-consuming to do your job
properly
and in a legal fashion, and you find it too difficult to explain to the
brownshirts why you can't just summarily run anybody they disagree with
off
the air. I'm rather disappointed in you, Riley, because I really
thought
you
were too sophisticated, and too familiar with my previous dealings with
your
agency, to try to pull that kind of shit. Riley, hasn't anybody in your
office
told you that Billy Crowell is no pushover? I think you should pull my
file
and read about my prior encounters with the Commission. I won them
all! Every single one! I'll tell you about them later in this
Response, by
way
of explaining why I have my rather jaundiced view of the Commission's
amateur enforcement efforts over the years.

And now I see from your curriculum vitae that you are a big buddy of
Al Gore, and I'm really beginning to wonder about you, Riley! In order
for
you to understand a little better where I am coming from, I guess I
should
tell
you that about the most upsetting experience I've had in years was when
I
had to explain to my (then) 8-year-old daughter what oral sex was
because
we couldn't avoid Bill and Monica on TV. I really would have liked to

have
waited until she was older before I had to tell her what it meant, you
know? Now, can I blame anybody but Bill Clinton and your Democratic
buddies for that? Check yourself out, my man! You're hanging out with
the
wrong crowd! Those Democrats will lie and say anything they need to
say to
get elected, and it's just a question of whether or not they can get
enough
stupid people to believe them in order to get elected! I mean, if the
politics of
your position is driving you crazy, and that's the reason you're acting
so
erratically and making so many mistakes in your enforce-ment actions,
you
could always get a job in private industry and get your head on
straight.
I've
had many friends who formerly worked for the Commission and got out
when the political bullshit got too heavy, and they're much happier
now. And when you sink to issuing warning notices to good operators
like
me, then you are really just advertising the fact that you are probably
just
a
miserable person, who's jealous of me because I'm having more fun on the
ham radio than you are! So if you decide to remain in your position
despite
your apparent misery, then I conclude that it is self-imposed misery
and I
really resent your trying to bring me down to your miserable level,
too, by
sending me your Warning Notice!

Well, anyway, before I address your allegations, please let me
tell
you a
bit about my ham radio history. I got my license as a Novice in 1960
when I
was 13. My friend's 6th grade teacher (Lee Grabowski, ex-K6UJR, SK
1984) was my Elmer, and he was working all kinds of amazing DX on
10-meter AM with a plumber's-delight beam during the 1958 sunspot
cycle. At that point, I was hooked on ham radio forever, or so I
thought
until
I received your Warning Notice! My Elmer administered the Novice exam
and I got the call WV6LSF. I worked a lot of CW with a DX-20 and an
SX-25. I was really lucky because I had a couple of teachers who were
hams
and they would let me get away without doing my homework if I swore I

was
working CW instead, which I always was. Therefore, within a fairly
short
time I passed my General and became WA6LSF. I took my General exam in
San Francisco from Engineer-In-Charge Landry in 1961, and during the
code test, especially the sending test, I was scared as hell because he
was
such an imposing old curmudgeon, and I was only 14 at the time. After my
code test, when Mr. Landry told me I'd passed, he added that I had a
good
fist! I think that was one of the proudest moments of my life and, I'm
sure
partly as a result, I still like CW and fancy myself a fairly decent CW
operator. (Some years ago I earned a Code Proficiency certificate
endorsed
at
45 wpm by the ARRL, and I think my code speed is still up there pretty
good.) I took my Advanced Class exam from my good friend,
Engineer-In-Charge Marti-Volkoff in San Francisco, in 1976 or
so. (Although, in saying he's "my good friend", I realize I haven't
heard
from him in a long time, so perhaps he'd consider me only an
acquaintance. Do you know if he is still in good health, by the way?
He
tried
to do a good job on ham enforce-ment when he was Engineer-In-Charge,
and he was quite fair and gutsy.) I've tried to pass my Extra exam a
couple
of times, but I'm one of these old-fashioned people who actually wants
to
learn all that Extra theory rather than just memorizing the answers
from the
question pool. The only problem is that maybe I'm just not smart
enough to
learn all that theory. In any event, I never had any problem passing
the
(former) 20-wpm Extra code test, but I failed the Extra theory element
by
about one question or so, and I just never got around to taking the
Extra
exam again after that, so I guess I'm just going to have to be satisfied
with
being an Advanced Class licensee forever.

During my 40-year ham radio career, I've built just about every
kind
of ham equip-ment there is, from breadboard regenerative receivers to
rack-mounted high-power RF amplifiers, so I feel I am fairly-well
qualified,
technically, to be a ham. I have also provided a lot of benefit to the

ham
community during the entire 40 years of my licensure. Here are three
examples of my service to the amateur community:

1. In the late '70's, and rather single-handedly, I would add, I
revived
the largely-moribund Oakland (California) Radio Club, was elected its
President, and coordinated its re-entry into the field of disaster
communications (from which it had been totally absent for a number of
years) by working closely with the Red Cross and RACES so that Oakland
would have the amateur disaster com-mun-ica-tions system which it was
then lacking.

2. In the early '80's, by petitioning the (former) Private Radio
Bureau
for relief, I was instrumental in forcing the highly-corrupt Grizzly
Peak
(Oakland), California VHF Amateur Radio Club to cease its jamming with
code practice, which it had been engaging in over a period of 18 months
on
its repeater on 146.82 mhz.

3. Also in the early '80's, when I first had occasion to discover
just
what a bunch of liars the Commission's amateur enforcement people are, I
took appro-priate action to educate the amateur community about it.
First, I
attended the non-renewal proceedings against former licensee Gary Kerr,
WA6JIY, before ALJ Kuhlman. Riley, I've seen many a kangaroo court in
my 28 years of law practice, but never anything like that run by "circus
Kuhlman"! He wouldn't let Mr. Kerr say a damned word in his own
defense! Don't get me wrong; I am not really defending Mr. Kerr's
actions,
but I am criticizing the extremely unfair nature of his non-renewal
proceedings. By the time Mr. Kerr got before ALJ Kuhlman, the
Commission and the U.S. Attorney's Office obviously had so prejudiced
the
ALJ against Mr. Kerr that Kuhlman simply wouldn't listen to him! After
Mr.
Kerr lost his license, a large number of his sympathizers, including me,
decided we were going to serve as Mr. Kerr's control operators on 2
meters,
so he could use our radios to keep talking to his buddies, pursuant to
the
former wording of §97.115(b). The next thing I knew, former Commission
Regional Director Richard Vaughan was trying to jump down my throat,
claiming Mr. Kerr, as a former licensee, was not permitted to operate
as a
third party under the former §97.115(b). (Sergei Marti-Volkoff, bless
his

soul, was unwilling to perjure himself, and refused to do the job for Mr. Vaughan, so Dick Vaughan had to do it himself.) I basically told Mr. Vaughan to go have sexual relations with himself, largely as I am going to tell you to do in this letter. Former §97.115(b) simply did not prevent former licensees from being third parties. So what did Mr. Vaughan do? He got his little minion, Carol Fox Foelak, who was then Chief of the Compliance Branch of the Special Services Division of the Private Radio Bureau (what a mouthful!) to initiate rulemaking proceedings to amend §97.115 and, as a result, the "Gary Kerr amendment" [§97.115(b)(2)] was added to §97.115! The point is that Mr. Vaughan, the Commission's Regional Director(!), was lying through his teeth in his warning notices to me: the Commission did not have the regulatory power it claimed to have; it was, as usual, just trying to unfairly throw its weight around; I called their bluff; and Mr. Vaughan eventually had to admit he was a liar by initiating rulemaking to amend Part 97 so as to add a provision which he had previously told me existed all the time! (So now I see, and as I will point out to you later in this Response, that the Commission is still up to its old, lying tricks in issuing me my Warning Notice.) My action, in forcing the Com-mission, in effect, to admit that it is composed of a bunch of liars who will distort the true meaning of the Rules in order to make their own jobs easier, and who will try to concoct enforcement powers that don't exist, was of great benefit to the amateur community because it helped all amateurs recognize and understand just what kind of scoundrels are actually running the Enforcement Bureau, and made it much more unlikely that amateurs would, in the future, permit the Commission to take unfair advantage of them.

Anyway, as you can see, I've been a ham for 40 years now; and I've really tried to be a good one, and I've rendered a substantial benefit to the amateur community during my entire period of licensure! I've gone

through
the whole ham radio indoctrination process, I'm familiar with all the
ham
radio traditions, and it has been a large part of my life. So I hope
you
can
understand that I am, actually, rather offended that you would accuse
me of
these things!

Also, while I'm on the subject of amateur exams, I sure as hell am
glad
I took all of my exams from the Commission itself rather than from a VE,
because I know damned well that you would have called me in for a
retest if
I
had taken my exam from a VE! I need to inform you at this juncture of
two
things: first, that you are fundamentally abusing your enforcement
powers
under Part 97 in a number of ways, which I will attempt to specify in
this
Response. One of the ways in which you are abusing your authority is by
misusing the re-test procedure for a purpose it was never intended: as a
means of punishment rather than for the purpose of guaranteeing the
integrity of VE exams. It's just another example of your very unfair
way of
trying to make your own job easier by denying licensees their day in
court,
or
any way whatsoever, really, to challenge your accusations or to defend
themselves against your (often incorrect) allegations which have nothing
whatsoever to do with the conduct of their VE exam, just to keep the
brownshirts happy! That is extremely unfair to the licensee, and has
caused
me to lose a lot of respect for you. So when are you going to stop
engaging
in
that lousy, unfair practice, my man?

In other words, I'm not buying your press releases, Riley, and
never
have, because I can see through them. What they really amount to is
that
you're willing to serve as the brown-shirts' lap dog in order to advance
your
own career. Reading your own press releases too much is about the
equivalent of drinking your own swill, you know. Riley, why in the
world
would I let a pipsqueak like you, who seems only to be addicted to
nursing

at
the public's teat, and who probably couldn't even cut it in the private
sector
as I am doing, take away my license for no reason?

Now I note from your Warning Notice that you seem to be attacking
my integrity, or are suggesting that I am somehow unqualified to
possess an
amateur license on, essentially, a moral basis! Please let me advise
you
right
now that if you are going to try to put my integrity in issue as a
basis for
attacking my personal qualifications to hold an amateur license, then I
propose to put your integrity in issue, too, and I have quite a number
of
issues that I want to raise which tend to show that you have not always
acted
in the most honest, forthright and professional manner possible when it
comes to enforcing Part 97. And since you have asked me to prepare a
complete and entirely candid response [and since it is a
separately-punishable offense under 308(b) of the Communications Act
if I
do not give you such a response], and not because I am trying to be
argumentative, I will try to specify in this response the various ways
in
which
you have, in my opinion, shown something of a lack of integrity and
competence in the way you have enforced the amateur rules. And I trust
that
you will feel that I have been quite candid in doing so.

The reason I feel so strongly about this is that you have
absolutely
no
reason to doubt my integrity. I am a graduate of my state's finest
universities, my children are all highly-educated (i.e., I put them
through
college!) (the younger ones, still in school, also promise to be
university
material), so I think I am a good parent; I am devoted to my marriage
and
family; I work hard; I'm a member of the State Bar of California, and
have
been, continuously, for the past 28 years; I have never been convicted
of
any
crime, ever, whether misdemeanor or felony; I have never been subject to
any discipline whatsoever, whether public or private, by the State Bar
of

California; I have never had any kind of civil judgment entered against me,
ever; I have never had any license or permit revoked by any branch of
government, whether state or federal; I have never declared bankruptcy; I
pay
my bills and I pay my taxes; and I feel that I am respected by the judges of
California's courts and administrative agencies, yet you come along and
gratu-itously attempt to disparage my integrity! Why in the world would you
attack an upstanding citizen like me? Are you crazy or something,
Riley? And how do you think I am supposed to feel about being attacked and
defamed in this manner? Actually, I think it displays a lack of integrity
on
your part! Therefore, your integrity is definitely going to be in issue if
you do
not drop these proceedings against me.

If you will pardon me for being blunt: I am just not going to let some
petty career bureaucrat attempt to gratuitously besmirch my character so he
can pad his resume, advance his career, kiss up to the ham radio
brownshirts, or so he can issue more press releases! Life's just too short,
and self-respect too important, to permit that! In that regard, please let
me
add that I am also going to raise the issue of your competence, i.e., the
many
mistakes that you seem to be rather infamous for making, on the basis that
my Warning Notice is merely another of your said infamous mistakes. Also,
and I must admit that these may only be rumors, but I have heard several
hams insist vehemently that that there may indeed be some irregularities
with your expense account for attending hamfests, and in my opinion there is
some reason for me to credit their statements, although I have not had an
opportunity to double-check them yet (and I do want to give you the benefit
of the doubt), so I had better put you on notice now that if those facts do
prove to be accurate, I am going to be raising that issue with respect

to
your
integrity, competence to enforce the amateur rules, and further with
respect
to the level of credibility which the ALJ and the courts should accord
to
your
testimony. Specifically, I have heard that you spent $5,000.00 of the
taxpayers' money in one weekend at the Las Vegas hamfest, and if this
allegation proves true, then I just don't see how you can really
properly
spend
that much taxpayer money in one weekend.

Now I really don't know about FCC administrative proceedings, but
in
California we believe that it is unethical for an attorney to both
represent
a
party and testify as a witness in the same proceeding on the basis
that, if
not
actually unethical, the practice leads to the appearance of impropriety.
That
is, the attorney's credibility is inevitably compromised if he is
permitted
to
both testify as a witness and advocate a party's case in the same
proceeding. Therefore, I am advising you now that if you take me to an
administrative hearing in this matter, I am going to call you as a
witness
on
the issues of your integrity, competence and credibility, and that I am
going
to resist the ALJ allowing you to both testify on those and other
issues and
represent the Enforcement Bureau at the same time, so I would
respectfully
suggest that perhaps you should make arrangements to be represented by
the
U.S. Attorney's Office in this matter, assuming the ALJ follows the same
rule of ethics that the California court does, which it seems they
should.

Anyway, Riley, if I have to examine you as a hostile witness on
the
issues of your integrity, competence and credibility, I'm placing you on
notice now that I'm also going to ask you all about the "phonetics
fiasco",
among other things. How long have you been a ham now, and how long
have you been doing enforce-ment, and why didn't you even know that

hams have always been supposed to use phonetics? Riley, the huge list
of
phonetics appeared in both the old and the new (post-1989) versions of
Part
97! Didn't you ever read either version? And over how many years
didn't
you read them (at least 20 years, obviously, because you didn't see it
in
either
version! Probably because, during that time, you were saying we hams
were
"self-policing", the exact opposite of what you're saying now, so you
didn't
have to read Part 97 for over 20 years!)? Or didn't you think you had
to
read
Part 97 before last year because only then did you decide to begin
making
your career moves by kissing up to the brownshsirts, and your highly-
touted
enforcement actions merely represent your efforts to gain promotion?
(And
if a little illegality and unfairness to licensees results from your
desire
to make
a name for yourself in enforcement, we all know those licensees can't
really
effectively complain about it, don't we?) Also, during that 20-year
period,
did you actually have any on-the-air experience, because if you did
then you
would have heard hams using phonetics all the time! So I must conclude
that you had absolutely no on-the-air experience, so where in hell do
you
get off telling me how to operate? And then you publicly
plead "temporary
insanity due to excessive RF exposure" as a defense, because you are
otherwise at a complete loss for words? Well, then, Riley, since you
raised
the issue, I am entitled to examine you about whether your admitted
"insanity" is temporary or permanent in nature; I need to know if you
were
still suffering from it when you issued my Warning Notice; and I intend
to
do
that if you take me to an adminis-trative hearing. Of course I realize
you
may only have been joking when you said you were "temporarily insane"
but,
again, you raised the issue, I didn't, and I really need to ask you all

about it at
an adminis-trative hearing if I am going to find out about it for
certain
and
thereby properly protect my interests as a licensee. I mean, you're
the one
who joked around about it, not me. I was just left to wonder exactly
what
you meant by such a lame joke. And if you were only joking about it,
why
were you reduced to being required to joke about it, rather than
providing
some substantive reason for your lapse? Was it really your attempt to
avoid
admitting that you really don't know your derriere from a hole in the
ground
about amateur enforcement? I intend to go into all of this at an
adminis-trative hearing!

So now for my factual refutation of your charges. First, I have
never
been on 3857 khz. in my life, and whoever told you I was is wrong. In
other
words, you're making another one of your mistakes. I have deliberately
avoided that frequency because that's where Orv Dalton's (K6UEY) old
buddies hang out, and they ran him off that frequency. I didn't want
to get
involved in Orv's dispute with the 3857 group, because I want to talk
to Orv
on 3830 and I've always wanted to give Orv the benefit of every doubt,
i.e.,
a
clean slate with no pre-con-ceived notions, in our on-the-air
relationship. Now, Orv is your com-plain-ant, isn't he? Well, I've been
nice to Orv. I have no problem with him, to my know-ledge. I thought we
always got along just fine. He never contacted me to indicate there
was any
problem before he complained to you. In fact, since he sent you his
complaint, I have spoken to him several times on 3830 and we got along
just
great. Therefore, I was extremely surprised to receive your Warning
Notice,
since I had absolutely no idea that Orv had any grievances against
me. Actually, I do remember now that I had one disagreement with Orv on
3830. It occurred when another station, Dennis Flora (N6UJY I believe
his
call is) showed up "drunk and disorderly" on the frequency. I agreed
with
Orv at the time that Dennis should go away until he sobered up, but Orv
and

I disagreed about whether he should be allowed back on the frequency after
he sobered up. Apparently Orv seems to feel that he is the guardian of all
ham radio morals or something, and unilaterally decided to run Dennis off
the frequency every time he showed up after that, and I took issue with Orv
about it. Riley, you should be on my side, not Orv Dalton's, because he had
no right to try to run Dennis off the frequency! Is that why he's so mad at
me? Well, why in hell didn't you require him to try to work out the problem
(whatever it is) with me directly before issuing your Warning Notice? I
assure you, Riley, that I would have been very cooperative, had I been asked
to change my on-the-air behavior in some respect that was bothering Orv
(except with respect to trying to run other stations off the frequency if he
happens to dislike them; I would never have agreed with him about that), but
I never got the chance because he never asked me to do so! If a ham takes
the trouble to contact me to complain about my operations, I always take it
very seriously and try to remedy any of my short-comings because I really
have an image of myself as being a "stand up kind of guy" where the ham
radio is concerned. So whatever happened to the concept of hams being
"self-policing", anyway? I notice that you give it a lot of lip service in
your
Warning Letters, but as far as I can tell, lip service is all it is!

As to 3820, we have discussed this matter before, and you specifically
approved of the way I handled it, which involved my voluntarily going off
that frequency forever. Indeed, in your e-mail to me on the subject, you
stated you questioned the other stations' operations, not mine! I thought
that was a final settlement of that matter, and conducted myself accordingly;
i.e., I haven't been back on that frequency since. I kept our agreement on
the assumption that you would, too, but now I find that you apparently do
not

wish to honor your own agreement, or probably that you've forgotten about it, and that you are in effect trying to punish me for being a gentleman with respect to the 3820 situation and for taking the initiative in solving the problem! So are you doing this on the principle that "no good deed should remain unpunished", or what? Now I am not saying I am going to go back on 3820 after receiving your Warning Notice, although it does seem that I should have the right to do so, but not because you are telling me to stay off, because you have no right to tell me that because you won't even honor your own agreement, but instead because, in addition to making a deal with you, I also made a deal with the other 3820 users and I am going to keep my word to them, even if you're not going to keep your word to me! However, I am most definitely going to assert your prior agreement about 3820 under either collateral estoppel or res judicata principles as a full and complete defense to any enforce-ment proceedings that you may bring against me for any transmissions I ever made on 3820! I haven't been back on that frequency since you agreed with the way I handled the situation, Riley, so why in hell are you talking to me about 3820 now? Nothing has changed since we entered into our agreement, and you're still bound by it, my friend! I think perhaps you forgot about it! And I am also saying that I am going to assert your forgetfulness, or refusal to honor your own agreement, as another example of your mistakes, lack of competence and lack of credibility. You're simply trying to do too much enforcement, too fast because you're trying to please the brownshirts and to over-com-pen-sate for the 20 years when the Commission told us hams that we were "self-policing", and meanwhile did no enforcement what-soever, and you're trying to make me pay the price for your own career-climbing and failure to enforce the rules during that period! And I don't appreciate it one bit! I have no intention of being your scapegoat!

Next, there is the 3830 situation. Apparently someone has sent you a tape of my transmissions on that frequency, although I can't imagine why, and you rather pointedly did not volunteer the information in our telephone conversation. The short answer to your Warning Notice is that my transmissions on 3830 are not only specifically permitted under Section 97.1 of Part 97, the "Basis and Purpose" section of the amateur rules, but they are precisely the kinds of transmissions envisioned as being necessary and appropriate under ��97.111(a) and (b). I was making inter-est-ing conversation in all of my transmissions, and such trans-mis-sions both contribute to the advancement of the radio art under ¦97.1(b) and advance my skills, and those of my fellow amateurs, in the communications phase of the art within the clear meaning of ¦97.1(c). Furthermore, I was helping to expand the existing reservoir of operators in the amateur service, as ¦97.1(c) tells us we should do, because too many boring QSO's on 75 meters are driving licensees out of the hobby. If you take me to a hearing, I am going to present evidence about how boring 75 meters is, and how I was providing a worthwhile alternative to that boredom. This is encouraged by ¦97.1, and therefore clearly does not constitute a violation thereof, as you wrongfully claim! The only problem is, if you force me to put on a lot of evidence about how boring and underutilized 75 meters is, it is going to redound to the injury of the amateur radio service because I will make sure that other radio services hear about it, and they will jump on that testimony as a means of bolstering their arguments that they should have the frequencies instead. If you take me to an administrative hearing, I am going to contact representatives of the other radio services and invite them to attend the proceedings so they can see how you've screwed up the amateur radio service, because at this point

I'm
starting to think that they really do deserve the frequencies more than hams
do, and your mismanagement of the amateur service is something they should know about in making their arguments for frequency
re-allocation. So any further enforcement action that you may take against
me in this matter is really going to hurt ham radio, and if it does, you have
only yourself to blame.

It has been said that he who sits on his rights waives them for all time. As Americans, none of us should begrudge Herb Schoenbohm's exercise of each and every right.

Through exercise, rights are strengthened, regardless of cause, increasing our own security. Let us not forget that it is the criminal law which makes our Bill of Rights live, since the case law defines Constitutional precepts. Would you want it any other way?

KV4FZ's pending cause is a Writ of Certiorari to the U.S. Supreme Court to overturn the administrative decision taking his license. It is just the first step in the Supreme Court process, yet that is detailed and complex with low odds.

As someone who has followed and journalized his legal Odyssey from attending his Criminal trial to present, I know, his criminal conviction is flawed, as is the administrative decision predicated thereon. Here's why.

After a conviction on three felony counts in a Jury Trial, the Judge reversed two of the counts. Why? Because the prosecution had fabricated a list of calls Herb was alleged to have made. Surprised by the list at the trial, Herb proved it bogus afterwards, leaving one count remaining.

This third count is a sham that wouldn't wash with anyone more politically correct. Herb stands convicted of "possession of a counterfeit access device with intent to defraud." But there is utterly no device, tangible or intangible. Though the statute under which he stands convicted was enacted to combat credit card fraud, it was slapped on Herb to supplement the two other counts which required a jurisdictional minimum of $1000. When they fell, the criminal case against Herb was bereft of an indispensable element, the corpus delecti (translated, the body of the crime).

Amid Herb's fight for exoneration from this mess, the FCC stepped in with its administrative hearing. Herb was expected to be wholly candid under oath. That presented Herb with a difficult dilemma: testify candidly and risk losing his criminal appeal or uphold his right against self incrimination? (And make no mistake: In my view, Herb misbehaved but not felonious conduct.)

The cases against him are silly perversions of our system. The atmosphere at his criminal trial was surreal, as one million dollars was pumped into making him an example. The Secret Service, FBI, FCC were all represented, as the prosecutor painted a picture of a criminal

kingpin--mind you, a guy who can't find his own checkbook. I was shocked at being thrust into this atmosphere. It looked like a white collar version of the Keystone Cops. Was I missing something?

A goundswell has ensued since. Considerations of justice have been drowned in the din: "Serves him right, let's get him off the air." As he's marched to the gallows, no one--including the FCC and Judiciary--seems to care about the "counterfeit access device." In fact, without it there can be no felony. And if there is no felony, the FCC has no case to take him off the air.

You see, readers, In these arenas, little progress has been made from the era of lynchings.

Your missing a number of generations of equipment.

Transceivers for HF weren't always around. Up until the late fifties,
an HF transceiver would have been an exception. It was separate transmitters
and receivers, and while some companies made both, it was far more common
to have a receiver made by one company, and the transmitter either home made,
or bought from another company. It was vastly different. If a transmitter
wasn't using crystal control, it sure wasn't using a VFO with a fancy
dial.

�nterestingly, VHF may have been a different matter. There was always
the split between casual use and DX'ing, and there tended to be a real
split in equipment between the two on VHF.

On VHF and UHF, the pattern from the early days was simple equipment,
very simple to begin, and then better equipment moved in either through
legislation (as standards improved, the regulation expecting stable
operation kept moving up in frequency) or because people wanted to go
further.

The earliest VHF equipment was on the level of superregenerative receivers
and modulated oscillators. The earliest transceivers were probably VHF,
because it was fairly simple to turn that superregen receiver into
a modulated oscillator, making the tube serve a dual purpose. I've
seen schematics for that sort of thing, but I have no idea how common
they were.

Modulated oscillators not only drifted, but they tended to put out a
fairly wideband signal (the method of modulation resulted in both AM
and FM). Of course, the superregenerative receivers had a wide bandwidth,
so they complemented each other.

Once crystal control arrived on a band (or people were pushing for
greater achievements), the equipment was much the same as used for
HF. The transmitters would have a few extra stages in order to multiply
the crystal controlled signal up to the needed band (and crystal control
was more common on VHF even after the VFO became common on HF, since

it required more effort to make a stable VFO for VHF work, and besides the crowding was less than at HF). The receiver, as others have pointed out was virtually always an HF receiver os some sort, with a converter ahead of it.

These transmitters, like their HF counterparts, would have been used for AM and CW.

The surplus from World War II helped a lot, not just in the way of transmitters (HF operaters also benefited from surplus), but I think of all those 8MHz crystals that were available in surplus which multiplied up to the VHF and UHF bands.

WWII surplus also brought equipment for the higher bands. A lot of people fooled around on 1296Mhz by using an APX/6, which had a superhet receiver (though very wideband) but a modulated oscillator. And there were similar simple surplus rigs for 420MHz.

Early to mid fifties, a new wave of transceivers became available for the VHF bands. These were relatively simple rigs, but with crystal controlled transmitters of 5 watts or so output. The receivers were usually superheterodyne, but in some cases they were still superregenerative. The superhets would have had relatively wide bandwidth, to accomadate the tuneable receive oscillators operatiing at a relatively high frequency that couldn't be made all that stable back then.

These simple rigs evolved somewhat, sometimes going to double conversion receivers and even making the transition to solid-state, but remained basically the same right up till the early seventies when FM became popular and the AM rigs vanished.

They were intended primarily for local use, but of course when the VHF bands opened up you could go quite far with this simple equipment. Most were AM only, and if they had a place to plug in a key, often they weren't well suited for CW; most did not have a means of receiving it.

As I mentioned, FM eventually took the place of AM for this level of mostly local operation. That transition was fueled by the availibility of FM transceivers made surplus from commercial operation due first to tightened up regulations and then the transition from tube to solid state/ These were crystal controlled on both transmit and receive, and yes, you needed a separate crystal for both transmit and receive, and for each channel, you needed a new pair. And with time, those surplus rigs became surplus, as FM rigs intended for ham use became available, and these were pretty much all solid-state. A bit later, synthesizers became available to do away with those crystals, and then with time they became standard.

The idea of SSB had been around for years, and while I seem to recall reading that some hams tried it early on, it must have been the early fifties when SSB use started to grow. The earliest ham SSB transmitters were home made, and they would have been stand alone transmitters.

Then commercially made SSB transmitters hit the ham market, and with time, SSB transceivers. It was SSB that made HF transceivers common, though for the first decade or so, matching SSB transmitters and receivers were made by various manufacturers.

I don't know when somebody first tried SSB on VHF. It's likely that it came almost as soon as a noise started being made about SSB on the HF bands, for the simple reason that hams wanted to try new things.

Either sombody bui[t a complete SSB transmitter for a VHF band (not ionconceivable considering the early SSB transmitters) or someone used some sort of converter to move an HF transmitter up into VHF, in the same way that receive converters were used to convert a VHF band down to a frequency receivable by an HF receiver. Some have pointed out converting an existing VHF transmitter into a transmitting converter, and I suspect that happened before specifically built transmitting converters. All you had to do waws change a stage into a mixer, pop in a new crystal, and retune things.

I've seen articles about VHF SSB in magazines from 1958 or so.

With time, commercially built transmitting converters became available. A company would sell a converter that matched their HF transceiver or transmitter/receiver pair. Collins made one to go with the S/Line (which itself came out in 58 or 59) in the early sixties.

And these commercial transmitting converters were available to the late seventies at least.

Meanwhile, there were even VHF SSB transceivers available from the early sixties. These were just like their HF equivalents, with a single VFO dial that controlled the frequency of both the transmitter and receiver, though covering only one band. Most of them were six meter rigs. The only two meter transceiver that comes to mind was a Gonset from the early sixties In design, they were all pretty much like an HF transceiver with built in transmit and receive converters. They even matched the HF rigs of the same manufactuers. And once you had a six meter SSB transceiver, the company would often sell a matching transverter to use it on two meters.

With time, early to mid seventies, as with the HF rigs, the US manufactuers disappeared and the Japanese rigs took over. They too had single band VHF transceivers that matched their HF rigs. Two meter and even 432 SSB transceivers started appearing in the mid-sixties.

But even at that point, transverters were still common, sometimes built, sometimes matching the transceiver, but my recollection is of a wave of transverters made by third parties.

It was only the mid-eighties, maybe even a bit later, that the multi-band VHF SSB rigs became available. And while there were a few cases where sxi meters was tacked onto an HF transceiver, it's only really recently that there have been those rigs that go from HF up.

So over the years, people built transmitters, both CW/AM and SSB, modified surplus equipment, modified HF equipment, built transverters, bought trasnmitters, bought trasnverters, and bought transceivers.

Guess it goes to show, if you conduct yourself in proper fashion on the air, you don't piss people off. Piss off the right guy, and you are in for a world of hurt, be it legally justified or not. Once you wake the sleeping dragon, don't cry if you get burned.

317. FOR SALE - ALINCO DJ-S41T Handheld UHF

Newsgroup: rec.radio.amateur.misc
Date: 2000-09-08 12:35:03 UTC
From: jcsarp@aol.com
Message-ID: <20000908083503.14371.00000199@ng-cq1.aol.com>
Source record: 103768

FOR SALE - ALINCO DJ-S41T handheld UHF amateur radio with extended receive and transmit coverage for the following bands:

Amateur 70 cm UHF Band ... plus FRS, GMRS, & UHF Business Band

This Alinco DJ-S41T (70 cm HT) is in MINT condition. It has only been used a few times and looks like brand new. It receives AND transmits from 421.300 MHz to 478.300 MHz with no gaps. ONLY the early versions of this radio are capable of receiving and transmitting below and above the 70 cm amateur (ham) band. This unit is an early version. It makes an excellent 70 cm amateur radio AND works great on the FRS (Family Radio Service) band located at 462 MHz and 467 MHz. This DJ-S41T also works very well on the GMRS Band and the UHF Business Band frequencies located between 450 MHz and 470 MHz. There are not many of these early units around.

The radio is for sale as a package deal with the following:

Early Version Alinco DJ-S41T in perfect condition
421.300 MHz to 478.300 MHz receive AND transmit
70 cm Ham Band, FRS, GMRS, UHF Business Band
1400 mAh NEXcell AA NiMH batteries (new)
Alinco EDC-78 optional battery charger (new)
Alinco ESC-27 optional soft carry case (new)
Belkin swivel clip (radio clips on your belt like a cell phone)
Original factory box
Owners manual

The NiMH batteries, Alinco battery charger, & the Alinco carry case are accessories that I paid extra for. THEY ARE INCLUDED IN THIS PACKAGE DEAL. (They are not included with the radio when you buy one new from a dealer.)

DJ-S41T SPECIFICATIONS

GENERAL
Channel Spacing: 5, 10, 12.5, 15, 20, 25KHz steps
Memory Channels: 20 Channels + 1 Call Channel Memory
Antenna Impedance: 50 Ohms Unbalance
Frequency Stability: +/-5 ppm
Microphone Input Impedance: 2K Ohms Nominal
Signal Type: F3E (FM)
Power Supply Requirements: 3.6V ~ 4.5V DC (4.5V standard with 3 AA batteries)
Current Consumption@4.5V: Transmitting: Approx. 260mA (High Power Receiving: Approx. 33mA Squelched)
Operating Temperature: -10 to +60 Degrees Celsius 14 to 140 Degrees Fahrenheit
Ground: Negative
Dimensions (Radio Only): 2-1/6(W) x 4(H) x 1-1/10(D) Inches

Weight: Approx. 6.5oz. (Batteries Included)
Sub Audible Tones Encoder Installed (50 Tones)

TRANSMITTER
Emission Mode F3E (FM)
Modulation System Variable Reactance FM
Max. Freq. Deviation +/- 5KHz
Spurious Emission -60dB Or Under Below Carrier Level
Tone Frequency 67.0 to 254.1Hz (50 Selections)
Microphone Electret Condenser
Operating Mode Simplex/Semi Duplex 5KHz Steps Minimum Between 0-15.995MHz
CTCSS Encoder Built-In And Included as standard

RECEIVER
Receiver System Super Heterodyne Dual Conversion
Sensitivity 12dB SINAD : Less Than -15dBu at 445.000MHz
Squelch Sensitivity Less Than -17dBu
Intermediate Frequency 1st IF: 23.05MHz; 2nd IF: 450KHz
Selectivity More Than +/- 7.5KHz at -6dB
Audio Output More Than 100mW @ 10% THD
Speaker Impedance 8 Ohms

Photo of DJ-S41T at: http://www.durhamradio.ca/djs41t.htm

PRICE - $100 plus shipping

>valid defense?

1==> I certainly wouldn't think so, unless there was some provision
that allowed you to buy equipment in advance of being granted your
license on the condition that you didn't use it.

Would think this highly unlikely, as it would, in practice, allow
almost anyone to possess a linear amplifier. All the illegal user
would have to do is buy a license manual or study guide and there
would be no way of proving that he _wasn't_ studying for a license.

2==> However, if it was ever accepted as a defense, it would set an
interesting precedent. A high school kid with a submachine gun could
claim he was planning on a military career. Caught with prescription
drugs, he might claim that he was studying to be a pharmacist or
medical doctor. ;-)

3==> If you got caught with illegal apparatus and tried this as a
as a defense, your authorities would probably get a good laugh out of
it, though.:-)

Just the fact that FCC actions against FZ have been in progress since 1994 and he is still active is a testament to Herbie's tenacity. But for God's sake, Bob; all he had to do at the hearing was to APOLOGIZE for inconveniencing the FCC, to show the remorse Judge Luton expected and to promise to become once again the Hurricane of Hero Hugo and that would have sufficed. Do you really think the intention of the FCC was to lift his ticket? I don't; in fact I think the FCC was willing to walk the extra mile to allow him to retain it.
Who knows? Maybe the Court will consider the writ? But dammit Bob, it's so obvious that Herbie did it to himself. There was no Intercon conspiracy; Ruth Hoffman's name was never brought up. Colby did mention my QSO with W2OOQ and that held no water either. Pat Miller was another "culprit" scheming against FZ. Holy hell, EVERYONE WAS TO BLAME EXCEPT HERBIE. What a travesty.

1==> Sorry, thought could lay my hands on my old CB license, but can't
find it at the moment. Am certain, though, that HF CB channels on 11
meters didn't [and don't] allow anything but AM or SSB voice
transmission. At one stage the issue came up when some farmers wanted
to use CB frequencies for telemetry applications, such as the remote
control of irrigation pumps.

Then too, if CB had been allowed, those chasing DX would have bought
Telereaders or communication computers so could use code on the CB
bands without the need to learn it. In DX apps, code would have
offered advantages as can get through where voice wont.

2==> On our UHF CB channels around 465 Mhz the service is restricted
to FM voice with the exception that can use tone modulation for
selective calling and repeater identification.

However, can't quote the regulation numbers to you at the moment. If
get time will look it up on Australian Communications Authority site
or at WIA [Wireless institute of Australia] site.
[Assume they will both have a site but don't know the URL's offhand.]

Thank you for your well reasoned post.
Fact is the "value" of code, and amateur radio, has diminished over the years. The ability to build a rig and communicate with people all over the world was extremely valuable when radio was new and a long distance call might cost a days pay but now we do all that over the internet with no investment in long hours of study or practice. It's as unreasonable to expect a person brought up on the internet to learn code as it is to demand that we homebrew all our transcievers. The Romans had a god "Dis Pater" (Father Time) who constantly created things then ate them. We became "appliance hams" and now "welfare hams". That's life ....

Doc, well expressed, much merit to your piece, in my opinion.

Indeed the greatest tragedies deal with the downfall of men from tragic defects. The FCC's good intentions in the face of Herb's folly do not remedy justice denied.

If there were no crime nor conduct befitting FCC censure, there'd be no need for due process. But once due process is set in motion, the accused deserves all of the built-in safeguards. Gideon (whose name is synonymous with the Great Writ) may well have committed a crime; still his jailhouse, hand written, Writ of Habeus Corpus moved the U.S. Supreme Court. Notwithstanding his alleged crime, they saw his safeguards had been violated.

Once there is a need for due process, our system is designed to grant equal protection under the law to everyone.

Yo,

Stern is looking for laughs. I don't watch or listen, but I can live with the fact. And I'm what a lot of you might consider an old fart. Along the lines of the post below, ever listen to the AM garbage on a LONG cross country trip? Invariably right-wing. Invariably inflammatory. Limbaugh? Shoulda fried him in his own fat. I'm not saying right-wing is bad, but anything extremist sure as hell is. But, then there's Freedom of Speech.... -Rod-

This is absolutely superb material from a truly brilliant individual. Almost every point he covers is related to comments that I made a year and a half ago when certain Riley-bootlickers on 3950 were laboring under the impression that the great Mr H was going to deal fairly with them, but they couldn't see it my way. I'm gratified that a man of Bill Crowell's caliber does.

Even though I myself got in trouble with Riley and feel I was set up and lied about which he accepted as truth and that I jammed no one as attested to on the air by one of the so called "jammees",KB4MXL(the other one,Polly has no credibility whatsoever) and no taped evidence was ever sent to me, NONETHELESS, one does NOT reply to a Federal Official in the tone and manner of N6AYJ. And you can bet your sweet bippy I never would no matter how incensed I was.

A reply to an F.O. contains "shit" and "princess?" AYJ tells him that he's paying his salary? I think the guy's nuts whether guilty or innocent. I simply could not believe what I was reading; in fact I had to reread it and might again.

That reply is going to set a precedent because Riley's credibility is now on the line and I'm willing to bet the ranch that AYJ is now in bigger trouble than ever before. Do you know what can happen to him; apparently he doesn't. Although we live in a great democratic country whose citizens have the greatest latitude of expression anywhere globally, it is not wise to "TICK HER OFF." If one is smart, one does not tug at Superman's cape, so to speak.

Government agencies are interconnected and an angry FCC makes a phone call to something like the I.R.S. and even though there's no reason to think that AYJ's books are not in order, he just might now have to prove it. This is worth cursing at and insulting a Federal Official?

N6AYJ certainly came across as telling off Riley. Man did he get it with both barrels. And for all I know perhaps AYJ did not deserve the warnings received but I'll tell you this: he had better line up a good cleaning service because something is really going to hit the fan in his house.

What you are responding to is an obvious "troll" posting. No bill may
be passed by a single committee of the Congress, and no bill can be set
up "to be revealed" at some later date after passage. What a paranoid
world-view!

Must be an awfully small finger. He, as well as Don&Mike, are
just another example of appealing to the lowest common denominator.

Yeah your probably right. AYJ is history. But ain't this how you
Democrats want it Doc? Bigger government. And you still think we live
in a democracy. Your a joke Doc. Wake up.

This is just ANOTHER REASON to throw those bums out of office.

340. Top Ranking military resign; Here's WHY - in his own words

Newsgroup: rec.radio.amateur.misc
Date: 2000-09-08 22:25:13 UTC
From: kk7ho@aol.communicate
Message-ID: <20000908182513.02569.00000316@ng-ce1.aol.com>
Source record: 103790

Military Readiness is Not A Political Game!
Col. David Hackworth
September 5, 2000

Justin P.D. Wilcox resigned last week over the plague that's destroying our Army. He was a future George Marshall or Dwight Eisenhower. This nation's armed forces cannot continue to lose such dedicated patriots.
Here, in his own words, is why he quit in disgust:

"Listening to the secretary of defense and top brass dispute the Bush/Cheney readiness claims has reaffirmed my decision to leave the Army as a captain this month. I served for the past five years in a declining institution which needs urgent help from its top leadership. My decision to leave the Army stems from my refusal to live the 'readiness lie' portrayed by the nation's top leaders.

"In the age of 'do more with less,' the most frequent topic of discussion for today's Army junior officer is the decision to leave the military. Accordingly, the top brass express their concern with the large numbers of captains departing the Army between four and six years of service. Their concern is so great that they surveyed majors with at least 10 years of service to discover why captains were leaving. It is hard to find out what is wrong when you really do not want to know.

"I was excited to begin my Army career after graduating from West Point in June of 1995, but over the next five years my zeal diminished. I realized that the brass and political leaders expected 110 percent capability but resourced for 50 percent. I received soldiers from Basic Training who could not pass fitness tests, qualify with their weapons, or uphold basic discipline standards.

"At Fort Bragg (N.C.), as a combat engineer in the XVIII Airborne Corps, my unit shot its weapons with live rounds only once a year for qualification and once a year for a live-fire exercise, due to ammunition constraints. Vehicles and equipment were rarely used during the months of August and September due to budgetary constraints at the end of the fiscal year. Newly fielded equipment did not meet the specifications of the equipment it replaced and only became reliable after at least two years of retrofits and recalls. (It is probably not known that from December 1998 until this summer, every new 2.5- and 5-ton vehicle on Fort Bragg, as well as the Army, could not be driven over 35 mph until retrofitted to prevent the drive shaft from dropping during movement and causing the vehicle to flip.) On a weekly basis, I saw more attention placed on landscaping and details in the unit area than on training soldiers in the field.

"For those who claim these statements are merely subjective, I can offer further proof of the poor unit readiness I witnessed. For two years I participated in the unit readiness report for my battalion, as the project

officer for the report and the head of battalion maintenance. Throughout the past year, maintenance or personnel issues have prevented achievement of top readiness ratings.

"Excellence is no longer the standard. The pursuit of mediocrity has become the norm. When will a general officer finally lay his stars on the table and stand up to the current administration for his soldiers?

"Junior officers stand where the 'rubber meets the road.' They have the responsibilities of preparing their soldiers for battle and ultimately to prepare them in such manner as to prevent casualties due to inexperience or lack of training. When the brass decide their objectives, the lieutenants and captains bear the responsibility of taking these objectives. "Retired Gen. Norman Schwarzkopf stated in his autobiography that a commander can delegate authority, but never responsibility. I realized that in the future I could be responsible for the deaths of too many men who could have been saved by proper training.

"I was not prepared to sacrifice good men, knowing that their deaths could have been avoided. I could not in good conscience continue to live the lie of our current readiness.

"When the next round of bloodshed by U.S. servicemen happens due to lack of preparation, the current brass and civilian/political leaders should be responsible for signing the following casualty notification letters:

"Dear Mrs. Smith, I regret to inform you of the death of your son. His death is my fault, for I did not properly train him."

Thank you for your rare courage, Captain Wilco

Al Gore Reasons.

I hope you guys don't mind my adding my 2 cents worth (hey, there ain't no cents key on modern keyboards!) to this thread. Even IF (and there isn't, I assure you) there was a cause/effect - bear in mind what work is. It is a product which includes TIME. In other words, 1000 watts for 10 minutes is the same as 100 watts for 100 minutes or 10 watts for 1000 minutes. How many hams are there in the US? Half a million? How many are inactive (or dead)? In Monroe county, NY, the Rochester Amateur Radio Association has a couple hundred members. How many hams? I don't know, but I doubt it is more than a few thousand. Many may only use VHF/UHF and are likely at or below 50 watts. Myself, I simply use an HT (1 or 2.5 watts). That is around what a cell phone uses. I would submit there are a heck of a lot more cell phone users than VHF/UHF ham operators - and I see them yakking at the supermarket and at work all the time! Then there are the HF hams. How many active? A couple of hundred - maybe. Ok, say there are a thousand (and I doubt that). How much power? Most are using 100 watt HF rigs. A very few are running kilowatts. How often? A couple of days a week? How long? An hour or two at a time? Now, look at WHAM, a commercial broadcast station. 50,000 watts, 24 hours a day, 7 days a week. That is only one of many AM broadcast stations in our area. Then there are the FM transmitters. A dozen, perhaps? How much power? 24 hours a day, 7 days a week. Oh yes, television! Channel 8, 10, 13, 21, 31, and two UHF stations I don't watch. What is the effective radiated power of those things? 100,000 watts each? 16 hours a day, 7 days a week. The total combined power of the hams wouldn't reach these levels - and the hams are on the air a combined total of what percent? 0.5? This thing is insane. Also, any time you think the hams (or CBers who probably have more amps on the air at any time than all the hams combined) can effect the weather - and what

about the commercial stations - just wait for a sun storm. You will see one sun storm wipe out all of the communications all over the globe. You give man more credit than he will ever be worth when it comes to affecting the weather with radio waves.

Oh, shucks! My darn washing machine is oversudsing. I have to go. Must be some ham radio operator affecting the machine.

73s,
Jim AA2QA

Don't worry. I let my tickets (ham, 1st phone and telegraph) expire
around 1980. I decided to get 'em back in 1993. Just go down and test
out like I did. It's easy.

Jim AA2QA (former WB2OSP, WA3RJX, N2JH)
ps - also got the GROL back (since there is no 1st phone anymore) and
didn't bother with the telegraph ticket since it is useless anyways.

Sure there is (ï¿½). Its some keystroke combination of the dollar key (alt, alt-shift, etc). On my Mac, it's the "option-4" keystroke combination. Don't know what it is on the PC, but I'm sure its there.

Of course, I'm not absolutely sure the character I typed will show up correctly on your screen - often the Macs and PCs use slightly different ASCII codes for these odd characters, so it may show up on your screen as garbage.

> Even IF (and there isn't, I assure you)

Spent way too much time on this already. I'll pass.

> Oh, shucks! My darn washing machine is
> oversudsing. I have to go. Must be some
> ham radio operator affecting the machine.

Oh no, another myth to debunk. Oversudsing is not caused by stray RF energy - it is caused by over-zealous people (often male) who think that if a little laundry soap will get it clean, a little more will get it even cleaner.

It seems to be mainly a "guy-thing," probably caused by conditioning during our endless quest to get that bolt just a little tighter (usually until the bolt breaks), or that barbeque grill just a little hotter (until flames are shooting fifty feet into the air).

We're not sure why some women also put too much soap in the machine, but I suspect it has somthing to do with sex in the bedroom. But I'll just leave that theory to your imagination.

In the ARRL news letter today:

IARU REGION III CONFERENCE CALLS FOR MORSE EXAM PHASEOUT

The 11th International Amateur Radio Union Region III Conference ended September 1 by resolving to seek the ultimate removal of Morse code proficiency as an International Telecommunication Union licensing requirement for HF operation. As "an interim measure," the conference agreed to support the reduction of all Morse code testing speeds to 5 WPM.

"IARU Region III strongly supports Morse code as an effective and efficient mode of communication," the resolution said in its preamble. "However, it believes that the position of Morse as a qualifying criterion for an HF amateur license is not relevant to the healthy future of amateur radio."

In a few years our region will adopt the same rules that region III will adopt.

Nonsense!! The military has increased the difficulty of basic training to a point that it is having a serious negative effect on the soldiers (in my opinion). For example, in one recent basic training unit at Ft Lenard Wood (MO), more than 58 percent of the group failed to graduate due to sleep deprivation, injuries, and one death. While the number of dropouts in this group was certainly the highest, all the training units at Ft Lenard Wood during that time period were reporting between a 35 to 45 percent dropout rate (again, mainly due to serious injury).

Therefore, I'm not surprised that Wilcox received new recruits in such poor condition - by the time they arrived at their permanent duty station (after basic and AIT), their spirit was broken and, very likely, so were their bodies.

As far as resources (money) are concerned, the military has a system in place that eats money like it is going out of style. Each year, military commanders are given a unit budget of a fixed amount. This amount is based on last year's spending (and other minor factors), with a reasonable increase for inflation.

Years ago, most units were often left with a large surplus at the end of the year, with the next year's budget reduced as a result (the excess money was returned to the budget for the next year's needs). The military's chain-of-command, concerned by the constantly reducing budget because of reduced unit demands, urged unit commanders to spend as much money as possible, even if it was not needed. The purpose was to drive up the budget, not spend money based on need.

In fact, it was not enough to just use all the money allocated. To drive up the budget, it was important that the money run out before the budget period is over. Of course, this required very creative thinking by unit commanders. It was hard enough to spend money that you didn't really need, but it was another to spend that money quickly enough to

run out before the budget period was over.

As a result, money was spent on the most useless nonsense. For example, SETAF (a major command in Italy) recently purchased a large, custom-made, wall hanging for about $9000, while at the same time complaining that it did not have enough money to meet training needs.

In other words, this system insures that, not matter how much money is given, units will run out of money before the end of the year's budject period - with the resulting complaints from military personnel that they are not getting enough money from congress. And, of course, the congress (afraid of looking anti-military or, even worse, anti-soldier) rushes out to increase the budget accordingly. In other words, congressmen don't like explaining to the people back home why they failed to increase military spending with all those soldiers out there complaining about the lack of money.

So, where is all the money going if not being used for actual training needs. Well, in addition to the nonsense mentioned above, the military is in the middle of the largest equipment upgrade in this country's history. Older, but still very effective, equipment is being replaced on a massive scale (Abrams replacing the M60 tank, humvees replacing the jeep, new ships replacing old, new planes, and the list goes on).

In addition, new technology is being purchased at an shocking cost. For example, units are being flooded with new desktop and laptop computers, even if the unit has little need for such equipment. And I repeat the word "flooded" - one unit personnel office in Europe received seven brand new laptops, even though there are only three people working in the office.

Anyway, the point to all this is that the American people are being played for suckers on this. By hiding behind military security, the military has been able to hide, from the American people, the fact that there are huge sums of money at their deposal. Stories, like the one you quoted by Col. David Hackworth, are designed to only fuel this lie.

If it were a regional issue, you might be right. BTW, I am not sure the US is not a Region 3 member owing to Pacific possessions.

How come it is such a big deal when one or another group proceeds with the inevitable?
If and when it becomes important enough to be acted upon in the usual bureaucratic ITU manner, the Morse issue will go away and everyone already knows it. While it may well cause a few no-coders to cream their jeans, the only real decision left is whether to learn it at a level that is more an irritant than an exam and get on the air or wait for the issue to become important enough to get onto an ITU agenda. At the moment, I am told it is not.

Classic illustration of Daddy Mac's 14th Law of Human Behavior: When an issue reaches the stage of burning public discussion, it has already been settled.

As for ships. The number of ships has fallen to about 316. The number of "commitments" has not fallen one bit. We are wearing out our ships faster than we are replacing them due to the high deployment ratio required to meet our "commitments". This toll is also showing itself in the alarming number of mid-career officers and enlisted men voting with their feet and getting out. The men and women in todays military are as dedicated as those of the past. However, the "do more with less" philosophy is a rubber band about to break. They are getting tired of being over extended and burnt out for political purposes.

While I certainly don't want to get into an argument over individual weapons systems (or even groups of weapons systems), what I was trying to point out in the previous message is that the military is replacing older hardware with newer hardware (instead of adding additional hardware, or repairing existing hardware).

And, in the case of the ships you mentioned, these new ships are being fitted with very expensive new technology that is driving costs through the roof. Now, this would not be so bad if this upgrade was being done over a greater period of time, but the navy has replaced more ships in the last ten years then it did over the previous thirty-five.

By the way, these new, enhanced technology, ships are not really needed for most of the existing commitments - one does not need a fancy computer driven, guided missile equipped, vessel to patrol third-world waters. Existing technology could be refitted for this work (instead of mothballed or sold for scrap), with new technology ships added at a more reasonable rate to meet future, more advanced, adversaries.

Anyway, since congress is not willing to finance these accelerated, expensive, new purchases, the navy decided to take money away from other areas (such as adding additional vessels). And it is for this reason alone that personnel on existing ships, with expanded commitments, are overextended.

Therefore, if you want to complain, complain to the military, not the congress. The congress is providing funding for the military at a normal rate - it is the military that is spending it at an abnormal rate.

Why didn't you cross-post this instead of posting it individually in several newsgroups? By cross-posting it (adding a group of newgroups to the send list), a person only has to read it once (in the first newsgroup he visits). That individual message does not show up again in other newsgroups, but replies show up in all newsgroups listed instead of in the individual newsgroups.

This leads to less confusion during the discussion amoung those who visit more than one newsgroup, and makes for a more robust discussion since more people see the responses.

Of course, no message should be cross-posted to newsgroups without justification (just like no individual message should be posted to an individual newsgroup without justification). In other words, a message not about antennas should not be cross-posted, or posted individually, to a newsgroup about antennas.

Our society is reduced to "I saw it, I wanted it, I whined, I got it" and "I want it all right now without any extra effort on my part" - If the time ever comes where the satellite communications are gone - CW will still exist for communications - PS FWIW, The military still requires the learning of morse code - the only thing they stopped was the broadcasting of reports in CW.

It is of little use to add additional hardware if you don't have the
ships to put it on and the manpower to run it.

Foreign weapons (especially missiles) are becoming more and more sophisticated and require constantly updated defense systems (hence the Aegis system). It is a never ending race.

> Anyway, since congress is not willing to finance these accelerated,

Congress decides when, what type, and how many new ships will be built and funds accordingly. The Navy can not divert these funds as it wishes. Often Congress force feeds certain types of ships on the Navy simply because that type and class is built in some Congressmans state.

> Therefore, if you want to complain, complain to the military, not the

One of my sons is a aircraft mechanic with a Navy fighter squadron. On any given day, they are lucky to have half their birds able to fly due to parts shortages. No Admiral would willingly have half or more of his aircraft grounded if there was enough money for spare parts.

I am newly licensed Tech at age 40 who fully intends to learn and become proficient in code whether it is required or not. It is a part of radio and part of our hobby. It is also a challenge for me, because I am having a difficult time mastering it.

If something is worthwhile (like getting on HF) some effort should be required. The amateur bands are a privelege not a right. Along with priveleges come responsibilities such as providing emergency communications in times of need. There may be times when CW is the only mode that will work. If that saves a life (maybe even your own) isn't that worth the effort?

Which military would that be, Kevin? How many WPM do they require? For
which specialty tracks?

Last I heard, the only CW net on the USDOD roster was on ELF, and that
is computer-to-computer.

> Dwight Stewart (W5NET)

CORRECT you are Dwight! I worked for a major defense
contractor for 30+ yrs and the stuff we had to do to make
the equipment meet "Mil-Spec" would not only make your
head spin, but it would inflate the final cost of a component
by over 10000% (yes, that's Ten Thousand Percent) or
more. Often this extra customization served NO useful purpose
from an engineering standpoint, and more often than not
you would find that the Original Contractor who drew up the
blueprints called out specifications which could only be performed
from an "approved vendor source" that *just happened* to be located
in the SAME Congressional District as the OEM Contractor!

To put simply, more than half the prints I used to work with had
conditions where the subcontractors were *required* to do the work
by order of the OEM - and who were these subcontractors? Most of
the time companies who were started by ex-management of the
OEM, often whom were "buddy-buddy" with Representative ----------
or Senator ----------.

These guys could *charge the moon* for a $1.00 bolt or lockwasher
and THEY were the ONLY vendors you could purchase the item
from, per the terms of acceptance of a Contract from the Govt !!!!!

Now you KNOW why there is such a thing as $200.00 hammers
and $500.00 toilet seats.

374. Use Palm computer for logging?

Newsgroup: rec.radio.amateur.misc

>Form or via the FCC's web site.
>

Actually now, you have limited choices, you can go to the website and download
form 605, and mail in the relevant sections of Form 605 properly filled out.
You apparently can't renew on line since the license is now expired. The form
incidentally has to be sent to the 1270 Fairfield, Gettysburg address. One
more comment from the time the data is available at any of the FCC servers, you
are licensed to operate, so it is not a very lengthy period of time before you
can get back on the air. If your license expired in July 2000, you have until
the anniversary date in July 2002 (in other words two years after expiration)
to renew without taking another exam. Good luck, and the forms you need are
available at www.fcc.gov, select forms then Form 605, which comes in PDF and
word perfect formats for printing out.

They DO make a log for the palms. Check palmgear.com and do a search
for ham radio or amateur radio. There's a program called HFlogger.
I use a Handspring Visor deluxe but haven't tried that program yet.

Greetings all,

Can a reverse polarity diode in an IC-706 short out without the polarities having been reversed? Which is the reverse polarity diode in the IC-706? The radio blows fuses the instant the leads are connected to a power source (even with the radio switched off). Is there anything else that could cause this to happen? Any assistance is greatly appreciated.

OUR Military - I am sorry that you are not in on the loop of exactly what types of communications modes are used. CW has been and will always be the backup mode for the DOD. When all else fails, and static fills the airways you can ALWAYS modulate the static for communication. And for the record, it's 22 WPM.

Source record: 103834

Hi, I have an ICOM IC-746 and I just couldn't decide whether to use a vertical HF antenna or use an all band HF dipole, so I have decided to do both. I will use the GAP Titan DX, and maybe the Van Gorden All Bander that is sold for $29.95 I just have a few questions though. I am a new ham, so I don't know a heck of alot about dipoles, but is this All Bander antenna center fed, or is it fed at one end of it? Also, does the dipole have to run in a straight line because if I put this thing in my backyard, I would have to make two 90 degree bends to make it fit. Also, do I have to ground this antenna like I would the Titan DX? If you could please help answer these questions I would appreciate it. Thanks.

385. 95 Chevy Astro van ignition noise?

Newsgroup: rec.radio.amateur.misc
Date: 2000-09-10 05:21:33 UTC
From: jwrzg@aol.com
Message-ID: <20000910012133.02516.00000607@ng-ce1.aol.com>
Source record: 103635

I have a 95 astro and am having a hard time with ignition noise. So far I have tried
mounting the antenna in different places but with no luck. The noise is S9+ when
the engine is under load. It drops to about S3 when cruising downhill or or on a
flat. (not sure if maybe the spark is boosted when power is needed or if this may
be related to timing advance.) I hear the noise on all HF bands. It is worse on 40m
where I want to work. Should I try resistor spark plugs and wires? Shielded wires
maybe? Where do I find these products?
I would love to here from anyone who has had a similar problem.
Tnx,
Jack

Sorry, Ken, but CW has completely, or almost completely, disappeared in the military. No current communications MOS (job) training requires a knowledge of code (contrary to your claim above) and there is certainly no widespread use of code by military personnel.

By the way, a few people in this newsgroup have claimed that code is still used by special forces units, but this claim has not been verified by any reliable source (special forces units typically refuse to discuss training or operations).

Sorry, Dave, but as much as I like to trash Clinton, the base closings were planned under the Reagan adminstration and started under the Bush adminstration. In other words, don't blame one political party for this and not the other. Both parties have been deeply involved in the base closing process.

<<Should I try resistor spark plugs and wires?>>
THe best noise supression spark plug wires are "Spiral Wound" wires. THe spiral winding acts like a long inductor. A benefit is less resistance. I would also go for the BEST (aftermarket) cap & rotor. I use Bosch Platinum plugs, too.

Well, beachmaster, we'll just have to let it go with that. Since we cannot even agree on the basics (such as quoted above), it is unlikely that we will ever agree on the overall problem, or a solution. Thanks for the interesting discussion.

Not trying to be condescending, Dave. I'm just seeing more and more messages posted individually like this instead of cross-posted, and I figured perhaps the person was not aware of the cross-posting process.

Anyway, I decided a message on the subject cannot hurt. If the person is aware of the process, then my messages only serves as a reminder. But if the person does not know, then perhaps he'll learn something (as will possibly others reading this thread).

Removing CW from ham radio will not convert anyone committing crimes.
If there is anything illegal going on then that is what should be
expunged.

If you have some other agenda (removing CW from ham radio?) then you
have to debate that subject much more convincingly.

Regards,
Paul.

I'm sure there are a number of things that will cause this,
but I think one of the first things I'd check is to see if the
power cord is shorted.

would it be ok to ask for a fax machine checkout, on this newsgroup?
I don't have enough reason to buy a fax machine and I don't want to leave my computer on for the very occasional faxes that might come my way.
Yesterday, Saturday, friend of mine told me about this fax offer at www.fax4free.com (this is not an advertisement)
I got register, for it, and got the phone number. My friend called me and got the number and tried to send me a fax. For some reason, it didn't work.
I was wondering if some of you might be willing to give me a hand by sending me a fax. Nothing elaborate. If the system still does not work, I will send the service an email and give them the details. If it works then I have a remote fax machine.
thanks in advance.

<chuckling>.....Even I'm starting to give up on trying to explain a good thing (morse using cw) to the "instant gratification" crowd. Sure had to laugh though as I read your attempts, thinking to myself, "what a good idea"....the military isn't stupid.....work hard at getting the general populace and commercial users to abandon the thing......get the expertise OUT of general circulation.....then by gosh we'll (military) have something special once again (even if for backup)!

I can hear the laughter......but was the joke understood?

Not quite true. Navy signalmen (the blinking lamp guys) still have to
know Morse, but radiomen (all branches) are no longer required to
know Morse.

That's MSK (Minimum Shift Keyed), not CW, and it is convolutionally encoded,
not Morse encoded.

A good move, although it should have been done 25 years ago
in the USA. It's really too late anyway. The damage is already
done. There are few, if any, 20 and younger people interested in
ham radio. What young person today, apart from the offspring
of hams, are interested in a ham licence? Really, ask yourself this
question, HONESTLY, and put aside the pre-programmed obsolete
mantra that ham radio is some kind of a vital and technologically
active endeavor in 2000. Put a fully equipped Pentium-III MMX system
next to an Icom and what do you think the majority of the young people
will choose to play with in the Year 2000 and beyond...??

Answer the question...be honest now ! (if you said ham radio, I wish you
luck)

Hi,

Today a pickup a president Lincoln. It's works fine but only on the CB band (26 to 28). Its look that the 10m band is disabled!! There is a frequency shit 28.350 is 28.000 / 28.350 is 28.420 but only on the 10m band (I removed the frequency mod) Maybe I'm overlooking something???

Help!!!! Transceiver

Hans PB5KT

> Receivers only or transmitters/receivers.

.....IMHO.. IF your talking Amateur (or SWL) receivers vs. transceivers....
I'd say they're both in the same league (assuming you're not comparing
apples and oranges and compare rigs with comparable features). The
electronics inside and circuit designs are the basically the same if you're
comparing a transceiver vs. a receive-only rig (similar class rigs) from the
same manufacturer. From what I've seen of the Amateur transceiver market
vs. the SWL receiver-only market, you pay NEARLY the same (usually less than
a 20% difference) for either comparable product.... so WHY NOT get the
transceiver?

404. Re: the Death of Morse Code

Kevin,

This does not spell the death of morse code no more than powered boats ended sailing, cars eliminated horse back riding, email ended greeting cards, modern funiture ended antiques, airplanes ended hiking and mountain climbing, and so forth. CW will continue to be used by those that enjoy it just for the challenge alone but with it comes the criticism of those that believe newer is better and we should thus do away with the old. It's unfortunate that all sides of the issue can't be more accepting of the other, that in itself is more damaging to ham radio than the issue of code iteself.

Honest answer: you are right. But what has that got to do with CW?
CW requirements only hindered the brain dead CBers that wanted to free band
a little more than they have.

Had nothing to do with radio vs internet. I have 3 kids, all big into
computers. It is insulting to suggest they are too stupid to learn CW.
They did (in 2 days) but just rather be on the net. Give away 'ham'
licenses like CB, you will still have the same lack of interest issue.

so you win. 10-4

You are correct that no MOS or NEC (job) training requires a knowledge of
code, however comma, the requirement of code is still in place for personnel
in key communications positions. These positions are not listed in your
recruiting guides, but as I said , are used for backup communications in
case of total loss of electronics. I never said there was widespread use by
all military, just that CW will always be the DOD's backup. I checked with a
special communication SPECOM acquaintance and was assured that CW is alive
and well in the military. On a special note - in the movie "Independence
Day", after the aliens destroyed the communications satellites and the cell
phones and internet no longer worked, the long range communications were
handled with CW - This is still the universal language - I can still "talk"
to a ham in Botswana w/o any knowledge of his language, and he with me. Say
what you will, but the facts speak for themselves. Even the internet was
invented for the DOD for backup communications, but they still haven't
improved on the simple effectiveness of CW transmissions. - BTAR

The real Damper behind Ham Radio, I see, is the overly restrictive
neighborhood covenants and zoning laws. I remember in the late 70's you
could'nt go several houses without seeing a CB antenna sticking up on
someone chimmney or roof. If CB was introduced today it would never flourish
or even survive like it did then.
Of course you are saying that is CB radio. What about Ham radio? The truth
is the public really does'nt know or care. When they hear that your
unsightly antennna is radiating something they do'nt want to have anything
to do with it. Plus they remember the neighbors that had those ugly antennas
on their roof and came in on their phones and TV. I only see it getting
worse with the FCC now requiring you to be RF compliant with your station.
Does this mean eventually you will have to disclose to your neighbors your
enviromental impact on their property? Will they be able to point and click
on an FCC database one day and see where your ham station is and imagine
those harmful waves enveloping their property?
When the public thinks of radiation they think of a nuclear reactor or that
awful cellular tower that was about to go up down the road until they all
banded together and squashed it. Nevermind the cellphone that they just
talked on all the way home from work.
That is different.....

Is it really necessary for this crap to be on seven usenet sites?
Particularly when this 'official abolishment' comes from a group that does
not set rules. It will come when the ITU acts and it is currently not on
the agenda for the next six years. Don't stand on one leg.

Dick

Folks,
Are there any special tips for prolonging the life of a Lithium Ion battery? Any required maintenance like fully discharging once in awhile? I've heard that that they have no memory but I think I've seen chargers which have a "conditioning" mode which discharges them. But I could be confusing that with NiMH (which also should have no memory so go figure).

Any info would be appreciated

Bill - N2ASA

Agreed.

Unless you have an older TX only rig (like the Vikings, etc.) their is no
reason to just purchase a RX only unit.

Sorry son, I hate to burst your bubble, but there are many things in the military that do not appear on MOS codes - I don't know what military you were in or how high up in the organization, but my guess is you weren't very high up on the food chain. If you want to go on believing everything is black and white vote for the big "W" in the next election. PS - If you were the communications expert you seem to claim to be you would know what BTAR meant.

Hmmmmmmmm . . .

They don't train code for any MOS, but key positions require it . . ?

That sounds to me like there is a dwindling pool of people to fill those
key positions . . .

> These positions are not listed in your recruiting guides,

If they exist, they will still be on the MOS list, with a written set of
performance requirements. Please provide MOS numbers.

> but as I said , are used for backup communications in case of total loss of electronics.

How are you going to send and recieve CW without electronics?
Heliograph? Or maybe a chain of Navy ships will sit on stations across
the Pacific to flash light signals from San Francisco to Hawaii . . ?

> I never said there was widespread use by all military, just that CW will always be the
DOD's backup.

You might actually be right about this -- but you have completely failed
to prove your assertions.

> I checked with a special communication SPECOM acquaintance and was assured that CW is alive and well in the military.

Please provide his grade, MOS and unit for verification.

> On a special note - in the movie "Independence
> Day", after the aliens destroyed the communications satellites and the cell
> phones and internet no longer worked, the long range communications were

That movie was fiction. Starting with the little green guys and ending
with a president flying a fighter. I worked with the guys who wrote and
produced it (when they did "Universal Soldier"). They're great guys,
but neither of them has any military communications experience.

> This is still the universal language - I can still "talk" to a ham in Botswana w/o any knowledge of his language, and he with me.

I fail to see how "mbooga rajo shas xxonx" would make any more sense in
Morse than over phone . . .

Hello,

I'm am recently the proud owner of a 70' free-standing tower and a Mosley Pro57B. I've been working up to this installation for years and I'm having a blast! Unfortunately, so are the local birds and my cedar deck is now covered in bird crap!

I'd appreciate some helpful hints from anyone who has solved this problem!

Many thanks in advance...

Hi Casey,

I talk on VE3MOT all the time and certainly appreciate the fine job you have done keeping that machine on the air! I too have had to deal with of bird poop. Go to Home Depot and rent a power washer and clean up the bird dung. Next try a plastic owl up there on the tower that should help. If they get use to the owl then put vaseline on the parts they are sitting on and they will not like that to much.
Usually the Owl works.

Barry

Do what the biz's have done around here.. Get plastic owls.. Once they are put up, there is no on-going cost or labor, as with just about any other solution, and they seem to work pretty well..

Hmm.. My place-of-work actually just got a couple beach-balls with giant owl-eyes on 'em which worked just as well, but didn't stay aired up for very long, which would seem to indicate that just about anything might work, just in case you can't find the plastic owls.. Possibly just plaques on each side of the tower with the owl-eyes painted on or something similar..
Be careful, tho.. Might get some religious org after you for putting giant eyes up there.. ;)

I don't believe that Ham is any where near dead just because 20 year olds would rather play with computers over a radio.

Perhaps when they get older they may take interest in the hobby. Certainly ham is not for everyone, neither is scanning, shortwave, or astronomy. So what?

I will agree that CW is a total waste of time, and it was a good move to make a no code license. As for the old timer hams still out there, they will never stop defending it, even though they never or next to never use it.

However don't over look the the computer connection to ham, SW, and even astronomy. We all now have the capabilities that only a small hand full of people had 20 years ago. Wonder how much more advanced the next 20 years will be. Perhaps there will be some new prophet of doom making a simular post regarding the death of computers by way of the next big thing. Hard drives, keyboards, and monitors may become just as obsolete as CW. What would hologram virtual memory, and something on the line of the matrix, this could all some day be considered obsolete.

So lets just enjoy what we have for now, and not worry about what may happen or not happen ;)

I'm really curious if our area is all that different than the rest of the world. We have about 20-25 regular (By that, I mean daily or almost daily) users of our repeater. Of those 20-25, 5 are under 20 and 4 of those are under 18. Is our percentage that much different than the rest of the world?

73,
Rick N9GSU

Ham radio shows its need everytime there is a disaster and
all the "technology" fails. All the phone lines, power lines, TV
cable, etc., get knocked down everytime we have a serious
hurricane in FL. BTW, our local police, fire, and medical all
use an EDACS system, which is computer controlled. If the
central station takes a hit, there will be no communication.
There are plenty of instances across the country where this
has already happened. Our local Ham radio operators
work with local officials to maintain communications. Every
week Ham radio operators participating in disaster preparedness
call in on the net.

It is a real shame CW is now gone. Again, when technology
fails, what are you going to do? With nothing more than a
reflective piece of metal I can communicate with someone
miles away, provided they aren't too technologically advanced!

Yes, technology is wonderful. Many Ham radio operators are
deep into the latest toys, as I am. However, we don't fool
ourselves into thinking it can't all be taken away with 1 storm.
A small, category 1 hurricane (Erin) knocked out power to
18,000 homes for more than 3 days. This was a tiny storm
compared to hurricane Andrew.

Been there, done that.

Robert

SB DX @ WW < KB8NW $OPDX.476
Ohio/Penn DX Bulletin No. 476

The Ohio/Penn DX PacketCluster
DX Bulletin No. 476
BID: $OPDX.476
September 11, 2000
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WF1N, KF2TI, WB2YQH/WB2RAJ & The 59(9) DX Report, W3UR & The Daily DX, N4AA & QRZ DX, NH6YK, NI6T, K7BV, WC7N, K8YSE, 9M2TO, DJ5AV & DX News Letter, DJ7ZG, DK9IP, G3NOM, G3VMW, G3XTT, G4ZVJ, JF1OCQ, JH8KYU, LU1BCE, PA5ET, PB7CW, PY2YP, SP3GTS, T93Y, VK4AAR, VK8NSB and 9A4NA for the following DX information.

3A, MONACO. "The 59(9) DX Report" states to look for Willi, DJ7RJ, to be active from October 1-20th, as 3A/DJ7RJ. Activity will include Topband operations (1832 kHz). QSL via homecall.

3V8, TUNISIA. Hans/DF2UU and Win/DK9IP were operating from the club station 3V8BB over the past weekend to participate in the Worked All Europe SSB Contest (WAE). Reportedly their operation started on September 6th and is to last until September 13th (early morning UTC). Look for them on the following suggested frequncies: 28443, 21243, 14243, 7043 and 3743 kHz. They plan to concentrate on CW/RTTY/PSK31 and 12m/17m/160m after the contest. IMPORTANT: QSL only for QSOs on September 6th through September 13th (2000) via DK9IP (Bureau is preferred!!!). All QSOs will be confirmed via bureau after their return. For direct QSL request use DK9IP's new address: Winfried Kriegl, Schoellbronner Str. 72, 76199 Karlsruhe, GERMANY

4W, EAST TIMOR. Erkki, OH2BF, is active as 4W/OH2BF and is currently working for the United Nations High Commissioner for Refugees (UNHCR) in Dili for a few months. He has been active on 17 and 12 meters CW between 1130 and 1500z. However, we have not seen any QSNs since the tragedy of Pero, 9A4SP (see "Sad Note" below). QSL via OH2IC.
Also, according "The Daily DX", Jose, CT1FKN, who has been in Dili since August 15th working in the Portuguese Army for the United Nations Transitional Administration in East Timor (UNTAET), is expected to be active soon as 4W6FK. He is expected to be there until February 2001.
ADDED NOTE: The 4W/K7BV Web site for the upcoming operation has been updated: http://www.qth.com/k7bv/timor

5A, LIBYA. Abubaker, 5A1A, reports that during the month of September he will be active with the special callsign 5A31 on the air on all bands. This special is to celebrate the 31st anniversary of the Lybian revolution. QSL via a registered mail, Abubaker Alzway, Box 74421, Tripoli, Libya.

9G, GHANA (5V, Togo?). Andy, G4ZVJ, will be in Ghana and Togo between September 9-21st. Expect some CW activity from 9G5VJ and *possibly* from 5V7VJ. QSL via G4ZVJ: Andy Chadwick, Ripon, North Yorkshire, UK, HG4 1UA. His Web site is: http://www.g4zvj.demon.co.uk

9M2, WEST MALAYSIA. Tex, 9M2TO, informs OPDX that he will now be active in the RTTY contest as a Single OP/All band entry on 40 meters (7040 +/-) and 20-10 meters (+/- 105 kHz up from band edge). QSLs will be sent out automatically 100% through the JARL bureau.

A5, BHUTAN. The Clipperton DX Club DXpedition is active as A52FH until September 14th. Most of their activity has been on 20 meters CW/SSB with activity also on 30/17/15/10 meters. QSL via F8RZ. ADDED NOTE: "QRZ DX" reports that Peter, ON6TT, will be joining the team in Thimphu. There was no indication when and how long.

C9, MOZAMBIQUE (possibly, 3DA and V5). The "DX News Letter" reports that Reinhard, DL6DQW, will be active again as C91RF from Maputo now through September 23rd. He will also try to be activate a new IOTA from September 15-18th from Ile Mocambique (AF-new). He will be running an IC-706 MKII with a wire antenna and a 6 element 6m yagi on all bands. He is still trying to get a 3DA licence for September 23-28th and will then be active from Namibia until October 8th. QSLs via bureau to DL6DQW or direct with SAE and 2 USDs or 2 IRCs.

CARIBBEAN TOUR 2000 WRAP-UP (V2-VP2M-8P). Rob, PA5ET, reports that the Low Land DX-pedition Team (LLDXT) returned tired back in Holland on the afternoon of September 5th, from the Caribbean Tour 2000. He mentions that their operation was a great success with a total of 31915 QSOs made from Anguilla, 1351 QSOs from Montserrat (which was an unplanned activity of 1-5 days) and 31108 QSOs from Barbados which makes a grand total of 64,374 QSOs in almost 4 weeks time. They were active 24 hours a day with 2 stations, which was a hard job with 4 people. The Tour's Web-site was visited 5000 times during the tour and contains on-line logs, a tour diary and even real audio files of pile-ups, pictures of the islands, locations and many more details. More information will be added the coming days at: http://www.qsl.net/lldxt/v2_8p_2000/index.html
They will have 3 full color QSLs printed and sent out as soon as possible. For the QSL Manager's databases: V26EA, V26ET, V26FM, V26WP, VP2MPA, 8P9JR, 8P9JS, 8P9JT and 8P9JU all are via PA5ET's address: Rob Snieder, Van Leeuwenstraat 137, 2273 VS Voorburg, Holland.

D6, COMOROS. The Five Star DXers Association, closely linked to CDXC (Chiltern DX Club) and the UK DX Foundation, are pleased to announce a three week DXpedition as D68C between February 6-26th using a Titanex Vertical and RX antennas for 160 meters. This will be an all mode and all band operation with 6 stations active. The multi-national group is looking for sponsors to help cover the high cost of this operation. More details

are forthcoming. For more information, contact Don Field, G3XTT via
E-mail at: g3xtt@lineone.net
OPDX InterNet Subscribers will receive the complete press release as
an additional bulletin.

E44, PALESTINE. Ten Japanese operators led by Yoshi, JA1UT, are planning
a goodwill trip to Gaza, Palestine, from September 21st. If they are
fortunate to be granted a licence, they plan to operate up to Sunday,
September 24th, mainly on RTTY, 30m CW and 6m (50.115MHz) beacon). Their
callsigns will be assigned by E44 plus individual callsigns. QSLs will be
handled by each operator.

FO0, FRENCH POLYNESIA. By the time you read this, James, K9KUZ, should be
active as FO0KUZ from Bora Bora (IOTA OC-067) until September 13th before
he moves on to Moorea Island (IOTA OC-046), September 14-15th. Suggested
frequencies are: 14200, 21250, and 28400 kHz.

HELP WANTED (Medical). The Kingman Reef DXpedition needs a medical
professional on the team. The team anticipates the usual bumps and
coral scrapes, heat exhaustion and tropical fungi, but the possibility
of an accident, requiring more than basic first aid makes inclusion of
a medical person a necessity for them. They will consider physicians,
emergency medical technicians (paramedics), and registered nurses. Good
interpersonal skills are critical; good operating skills--on one or more
modes--will be a plus. The succesful applicant must commit to the October
15th to November 5th DXpedition timeframe, travel to and from Honolulu
at his or her own expense, and contribute 2500 USD for his or her personal
participation in the adventure. The payback will be participation in a
major DXpedition to a rare and difficult DXCC counter. Please reply to
Garry, NI6T via E-mail at: ni6t@intuitive.com

IOTA NEWS.....
NA-NEW. With the recent reorganization of the IOTA Directory, the
Appledore Island, one of the Isles of Shoals in the New Hampshire
Group, qualifies as a NEW ONE. Tony/WF1N and Lou/W1DIG will be
on the island September 15th, starting around 1900z Friday and
ending about 1200z Monday. Operations will be on 20, 17, 15 and
10 meters on/near the usual IOTA frequencies +/-, SSB, with a
tribander and amp. They will also be on 40 meters (7260+/-) at
the top of the hour as long as necessary each hour for close in
ops. QSL direct (SASE, PSE) or Bureau via home calls. Appledore
Island is 3 points for the IOTA 2000. Any questions, E-mail
Tony at: megahertz260@mindspring.com

OC-185/OC-198. Stuart, VK8NSB, informs OPDX that he is about to start
planning for 2 more IOTA DXpeditions on 2 rare VK8 Islands for
early 2001, but he would first like to know if any amateurs
intend to activate OC-185 and OC-198 IOTA Reference Numbers.
Stuart states, "My reason for asking is, two amateurs
in 1999 went to one of my planned DXpeditions a few months
before my team did even after I had invited them 6 months
before the activation to join the Team. They knew that we had

planned & spent $$ for the DXpedition ... I do not want to spend thousands of dollars and months of planning and getting special permits just to stay on these rare islands to have others go to these 2 rare IOTA Groups one month before my Team does. If you plan on doing a Dxpedition to one or both of these groups within the next 12 months could you please inform me ASAP .... If I start to plan these two rare IOTAs and Amateurs know that these islands are going to be activated by my Team but decide to go one month before us anyway, both DXpeditions will be cancelled ...." Stuart's E-mail address is: vk8nsb@octa4.net.au

OC-234. Browse Island Update. Alan, VK4AAR, informed OPDX late Sunday that he "regrets to announce that the 'Timor Sea DX Group' (VK6BM) were unable to refloat the catamaran "Tearaway" on either of the two tides to date. It now seems certain that it will not be possible to go to Cassini either unless some miracle happens. They are waiting for me to make further arrangements with the West Australian Water Police and the Royal Australian Navy vessel HMAS "Geelong" that is in the vicinity. The guys are well and have sufficient food and water for quite a while. They may even continue making QSOs from Browse rather than twiddle their thumbs. Now is that not true dedication under the circum-stances? I'll keep you posted." No other releases have been received since Sunday.

JT, MONGOLIA. By the time you read this, Jay, W8JAY, should have started his short operation as JT1FCB which will last until September 14th. Activity will be on RTTY and possibly PSK31. QSL direct via W8JAY.

KH0, MARIANA ISLANDS. Hidetoshi, JH8KYU, plans to operate as KH0/JH8KYU again from Saipan Island. He had operated there in the last CQ WPX SSB Contest. His next operation will be on September 23-24th. The main purpose of the next visit is to take part in the CQ/RJ WW RTTY Contest from Saipan. He will enter in the low power all band category. The location will be the rental shack managed by Yaesu at Mariana Resort Hotel. The equipment will be FT1000MP with a home brew modem into Force12 C4 beam.

KH4, MIDWAY ISLAND. Hiro/JF1OCQ and Takeshi/JE1RXJ will be active as W1VX/KH4 and NB6A/KH4, respectively, from September 22-24th. They will be active on 80-6 meters using CW and SSB. They plan to oparate a beacon on 50.115 MHz all times. QSL to W1VX/KH4 via JF1OCQ, NB6A/KH4 via JE1RXJ.

NH4, MIDWAY ISLAND. Ted, NH6YK, will be active again as NH4/NH6YK starting next weekend between September 17-21st. Although he has to do some work on the island, it looks like he will have some spare time to operate from the station there. The station is currently running a 100 watts into a G5RV, Force 12 C3, Long dipole and Vertical antennas as needed. Due to the quickness/shortness of the trip, it will be a phone operation potentially from 160-6 meters depending on the propagation. He states that he will take a printout of RS12/13 passes for Mode K. Ted will be looking par-ticularly for: South Dakota (his last for WAS), stations to fill up the

DXCC count, anyone on 6 meters and everybody else (Europe when there is an opening, etc.). QSL via the bureau or direct.

PACIFIC TOUR (YJ/Vanuatu and A35/Tonga). Babs/DL7AFS and Lothar/DJ7ZG will be active as YJ0AYL and YJ0AZG, respectively, from Vanuatu, September 30th through October 19th. They will then go to Tonga after October 21st (length of stay was not mentioned) and be active. Their bands of activity were not mentioned but they plan to be active on SSB/RTTY/PSK31 and some CW. QSL via DL7AFS. For more information, go to the Web page: http://www.qsl.net/dl7afs

QSL INFO AND NEWS.....
The Saint Peter and Saint Paul Rocks, PS0S, log is now avaiable for searching for QSOs at: http://www.qsl.net/cwsp/indexen.htm

The log search feature of the SV9/K7BV website apparently has not been operating for some time. Dennis, K7BV, apologizes; it is again up and functional at: http://www.qth.com/k7bv/crete

During August 21-28th, the Radio Club Kennermerland, PI4RCK, was active with the special event callsign PA6Y. This station was to celebrate the sail 2000 event in Amsterdam, The Netherlands. If you have worked PA6Y, and you like awards, you can get this special full color "Sail 2000 IJmuiden Award" by sending 5 USDs or 7 IRC's to: Radio Club Kennemerland PI4RCK, Westerduinweg 9, NL 1976 BV IJmuiden, The Netherlands.

NOT THE MANAGER! OPDX has been informed that OH7XM is not the QSL Manager for TU2MA. Send your cards direct to TU2MA; he will QSL 100% at: Michel Toure Vakaba, Box 520, Abidjan 01, Ivory Coast. However, if you have problems getting cards from TU2MA; Arno, OH7XM, may be able to help you (CQWWDXCW-91 for TU2MA QSL via now OH3JF).

SAD NOTE. It is with great sadness to report that amateur radio operator Pero Simundza, 9A4SP (aka 4W6SP, T98P, ZA/9A4SP), was one of three UNHCR workers that were brutally killed on September 5th in, Atambua, West Timor, Indonesia. Pero worked for the United Nations High Commissioner for Refugees (UNHCR) since 1992. He was very active with the UNHCR. According to his friends/colleagues he was "based in Metkovic, Croatia, during the war in Bosnia and Herzegovina helping with humanitarian aid efforts. He was later based at the UNHCR office in Mostar, Bosnia and Herzegovina, and worked there with the Bosnian callsign T98P. Before he joined UNHCR in West Timor earlier this year, Pero spent few months in Albania helping UNHCR Operations during the Kosovo crisis." He was also one of the first operators to be active from East Timor and gave a new one for some of you as 4W6SP. At this time, OPDX would like to send out our condolences to his family and friends. Also, during these hard moments for his family, all working colleagues and friends are asking you to enter a few words in an online condolence book available at: http://www.qsl.net/9a4sp (which later will be handed to his family). More information will be sent to all OPDX InterNet Subscribers as an additional bulletin.

SPECIAL EVENT. Special event station from Poland, 3Z0MM, is again active until November 30th, to celebrate the millennium of the historical meeting of Polish King Chrobry with German Emperor Otton III in Szprotawa. QSL via bureau or direct to SP3JHY: Jerzy Ryks, os.B.Chrobrego 3/IV/7, 67-300 Szprotawa, Poland.

TK, CORSICA. "The 59(9) DX Report" states to look for GBQV, F6BQV, F5TFP and possibly others to be active from here September 22-30th. No callsigns were given.

VK0, MACQUARIE ISLAND. Alan's, VK0MM, Web page states that the supply vessel "Polar Bird" is due at Macquarie Island on November 7th for the annual resupply of the station and departs for Casey Station (Wilkes Land, Antarctica) on November 12th. The ANARE 2000 and ANARE 2001 crews will change over during this time. Ths ship is due back in Hobart, Australia prior to Christmas. Therefore, VK0MM will be permanently QRT as of November 12th. There is no licenced operator in the Macquarie Island Australian National Antarctic Research Expedition (ANARE) 2001 crew. Alan does mention that there may be a minor operation as VK0LD from the Casey Station. His Web page also mentions that he will mainly operate on CW on 30 and 20 meters. There MAY be some SSB. For up-to-date information and Alan's schedule, check the Web page: http://www.geocities.com/vk0ld/1.html

ZD9, TRISTAN DA CUNHA. Bob, G3ZEM, is now active from here mainly on CW 20/15/10 meters, but has been heard on SSB. There will also be some 30 meters operation when Bob has a chance to fix the vertical at Andy's, ZD9BV, QTH were he is operating from. On a sad note for low banders, the Titanex vertical didn't get unloaded from the ship. However, Bob states that he will use a 100 ft. tower at the nearby ZD9 Coastal Station and will try to set up something this past weekend for the low bands. He will be here until September 24th. QSL via K4CIA. Logs are available on log at: http://dxtechnology.com/zd9zm

None. They're interests lie in getting high, stealing cars, listening to gangsta rap (crap) music, and bringing guns to school to shoot their classmates with.

You have to admit that all that bandwidth available to me as a relatively new Ham means that reliable World Wide QSO's are a viable option now that I'll get no interference locally.

Regarding the P3 and ICOM, the ICOM will be worth considerably more than the P3 in 2020, or indeed within 18 months.

Not that I'm leaning one way or the other, but I have only one ICOM, four Yaesu's and an old Pye. Along with a P3, P2, K62 and a 486DX-4...I must be a nut too!

One thing that has become faded from memory was the "correct" use of those good Q signals (I understand the Z sigs were mostly military as they weren't part of a merchant R/O's training, nor Amateur). The query QRZ? would receive the same reply regardless of language QRZ callsign. QRA? would receive the reply QRA name (of vessel etc). Of course if the person at the other end doesn't use 'em correctly - nothing will work (nor any computer system either). You could inquire QOD1? (Can you communicate with me in English for example) if plain language other than routine traffic passing was desired. Those darn Q sigs worked amazingly well.....I remember on 2 occasions working foreign merchant coast stations (we're talking late 1980's here) who could not speak any english in one case and limited in the other......no problem, call, reply, wait your turn is......go up to freq pair.....ready to receive.....what is your accounting authority....any more traffic.....2 telephone calls with numbers.....<next heard dialtone and calls to Canada>...back to morse....finished....1 more message.....received ok....no more traffic.....and then somehow we all seemed to understand cul or seeu and a couple o' dits.

There was lots of good stuff there never carried over to modern communications - I can hear the groaners lighting their complaining flames now.

That's in ITU3, we're in ITU2. And personally, I think we need to keep the code requirement to keep the idiots off of HF (my definition of idiots is people who run 1500 watts, kerchunk repeaters, don't identify themselfs, and (ahumm), cross-post newsgroups :)).

Yes, I agree. Ham isn't for everyone. But it's certainly not obsolete.
I don't even know half the code, but I won't ever stop defending it. Truth
is, I'll probably never have a single QSO with CW, heck, I'll probably never
even buy a key, but I truely belive that CW is a great way to keep the idiots
off HF......

438. FOR SALE - ALINCO DJ-S41T handheld UHF radio

Newsgroup: rec.radio.amateur.misc
Date: 2000-09-11 00:14:05 UTC
From: jcsarp@aol.com
Message-ID: <20000910201405.19672.00000657@ng-bg1.aol.com>
Source record: 103589

FOR SALE - ALINCO DJ-S41T handheld UHF amateur radio with extended receive and transmit coverage for the following bands:

Amateur 70 cm UHF Band ... plus FRS, GMRS, & UHF Business Band

This Alinco DJ-S41T (70 cm HT) is in MINT condition. It has only been used a few times and looks like brand new. It receives AND transmits from 421.300 MHz to 478.300 MHz with no gaps. ONLY the early versions of this radio are capable of receiving and transmitting below and above the 70 cm amateur (ham) band. This unit is an early version. It makes an excellent 70 cm amateur radio AND works great on the FRS (Family Radio Service) band located at 462 MHz and 467 MHz. This DJ-S41T also works very well on the GMRS Band and the UHF Business Band frequencies located between 450 MHz and 470 MHz. There are not many of these early units around.

The radio is for sale as a package deal with the following:

Early Version Alinco DJ-S41T in perfect condition
421.300 MHz to 478.300 MHz receive AND transmit
70 cm Ham Band, FRS, GMRS, UHF Business Band
1400 mAh NEXcell AA NiMH batteries (new)
Alinco EDC-78 optional battery charger (new)
Alinco ESC-27 optional soft carry case (new)
Belkin swivel clip (radio clips on your belt like a cell phone)
Original factory box
Owners manual

The NiMH batteries, Alinco battery charger, & the Alinco carry case are accessories that I paid extra for. THEY ARE INCLUDED IN THIS PACKAGE DEAL. (They are not included with the radio when you buy one new from a dealer.)

DJ-S41T SPECIFICATIONS

GENERAL
Channel Spacing: 5, 10, 12.5, 15, 20, 25KHz steps
Memory Channels: 20 Channels + 1 Call Channel Memory
Antenna Impedance: 50 Ohms Unbalance
Frequency Stability: +/-5 ppm
Microphone Input Impedance: 2K Ohms Nominal
Signal Type: F3E (FM)
Power Supply Requirements: 3.6V ~ 4.5V DC (4.5V standard with 3 AA batteries)
Current Consumption@4.5V: Transmitting: Approx. 260mA (High Power Receiving: Approx. 33mA Squelched)
Operating Temperature: -10 to +60 Degrees Celsius 14 to 140 Degrees Fahrenheit
Ground: Negative
Dimensions (Radio Only): 2-1/6(W) x 4(H) x 1-1/10(D) Inches

Weight: Approx. 6.5oz. (Batteries Included)
Sub Audible Tones Encoder Installed (50 Tones)

TRANSMITTER
Emission Mode F3E (FM)
Modulation System Variable Reactance FM
Max. Freq. Deviation +/- 5KHz
Spurious Emission -60dB Or Under Below Carrier Level
Tone Frequency 67.0 to 254.1Hz (50 Selections)
Microphone Electret Condenser
Operating Mode Simplex/Semi Duplex 5KHz Steps Minimum Between 0-15.995MHz
CTCSS Encoder Built-In And Included as standard

RECEIVER
Receiver System Super Heterodyne Dual Conversion
Sensitivity 12dB SINAD : Less Than -15dBu at 445.000MHz
Squelch Sensitivity Less Than -17dBu
Intermediate Frequency 1st IF: 23.05MHz; 2nd IF: 450KHz
Selectivity More Than +/- 7.5KHz at -6dB
Audio Output More Than 100mW @ 10% THD
Speaker Impedance 8 Ohms

I have for sale a Kenwood TS-830S that (WAS) in perfect operating condition, till I blew the finals...I won't go into the details, but in a nutshell I had a coax switch in the wrong position when I thought I was tuning the radio into a dummy load. Oops. Radio looks very good and receives very good, but now needs new finals. I had this package listed before at $675...my loss is your gain...first $400 gets it, payment via PayPal. Comes with Kenwood MC-50 desk mic in perfect working condition and looks good, too. Also, the TS-830S has the optional YG-455C CW filter installed. Again rig was performing FLAWLESSLY before my 'lid-like' mistake. E-mail me if interested.

Not according to the Navy's Communications Technology Branch, Kenn (the branch which sets Navy communications policy and procedures). When I contacted them a couple of years ago, a representative of their public affairs department was not aware of any code use in the Navy, nor was he able to find anyone in that facility that was aware of any code use. In other words, as far as he could tell, code was a thing of the past in the Navy.

I even asked about your notion of code used as a backup for regular communications. His response was that it would be a poor backup since nobody would know how to use it. However, he did state that there was probably reference material on most vessels that explained code, as well as material possibly available for most communications personnel, so it might be possible to use code as a last resort, but he was not aware of any set procedure for this.

As for the other branches, it appears to be the same situation - code has been eliminated. In the Army, for example, code was eliminated as a training requirement almost thirty-five years ago. I know this both from my experience as a radio operator in the Army (MOS 31M) and from recently talking to the education director at the Army's Signal School at Ft. Gordon.

So, contrary to your acquaintance's claim, CW is not "alive and well" in the military.

Sorry, "son," this sounds just like the standard "it's classified, so you wouldn't have heard of it" line used by people who Really Weren't There, whenever they are asked to provide any fixed details. The hostility to any request for details is also common from RWT's, a defense mechanism to jingle-jangle.

The fact is that, if it is officially there, it's in the book somewhere, someone's ERs depend on it, and it won't be a secret. If it isn't officially there, it's a HOBBY, not doctrine.

Your guess is wrong. I'm high enough in the food chain to be able to verify your information -- except for the minor detail that you haven't given any.

Your point is taken but if the answer to "QRZ?" is "mbooga rajo shas xxonx," the answer to "QRU?" is "mbooga rajo shas xxonx," and you give a 9-minute, 23-second explanation about your house, car, dog, kids and gallstone removal, then get "mbooga rajo shas xxonx" as a response, have you REALLY established communication . . ? ;)

Max legal power. After a while, birds will stop being a problem, and
the cats will be fat.

You can also try a plastic owl on a weathervane.

How about "both" as an answer. You seem to think it is a choice between one thing OR the other, computer OR radio. People can, and do, buy both. Computers and radio can exist side by side in the same room, just like it does for most of the people in this newsgroup. Computer users often have other interests outside of the internet, and there is no reason radio cannot be one of those interests.

> Again - it's TOO LATE. Ham Radio will be DEAD
> and FORGOTTEN by 2020. [snip]

Nonsense. People have been running around carrying signs declaring the end of the world for ham radio for years now, and it is not dead yet. Ham radio is evolving, adapting, and finding its place in the changing world. When it does, it will remain just as viable twenty years from now as it is was twenty years ago.

Around here many people find that the birds get used to
the plastic owls after a while and ignore them. Plastic
snakes are sometimes also effective (at least for a while.)

I've seen applications where they put up garlands of wire
spikes about 2 inches long spaced about 1-2 inches apart.
They don't have to be sharp (you don't want skewered
fowl hanging from your tower!), they are just there to
discourage the birds from alighting.

I don't know if this stuff is available commercially and it
might be too much to put it on all the horizontal surfaces
on a tower. And then you have to worry about how to
climb the thing without sticking your feet or bendint the
spikes.

Have you tried ultrasonic noise?

Richard

Wow, even if you were lucky enough to hook up with the one in
200 who can read Morse code, how would you know how to aim the
metal and hold it perfectly aimed and still for a dash? How
would you compensate for the rotation of the earth?

We have a fairly robust crowd of young people on the radio here. They (ten to twelve of them) sit over there at the beach every evening and talk almost endlessly on the radio (its almost became a telephone-like party line). They talk about school, dating, radio, cars, and anything else that interests young people today. I even listened several nights as three of them were helping each other with the exam questions for a license upgrade (they seem to be pretty good "elmers").

And their numbers seem to be steadily growing. A year ago, there was only a two or three on the radio. And now, like I said, there is more than ten. Remember, this is small town USA. The population in this area is only about twenty thousand. So that number of young people is pretty good considering the overall population size (and the number is growing).

By the way, I want to drop one more thing in here - the behavior of the young people on the radio here is outstanding. They are polite, cooperate well on the radio, obey the rules to the letter, and seem to get a great thrill talking to us old-timers - several routinely stop by the house (even bringing their girlfriends), and they are always inviting me to their tail-gate parties at the beach. In other words, these "kids' have added nothing negative to ham radio, and are actually turning out to be a very positive aspect of ham radio here.

Ronald Reagan was a grade B movie star who was able to stare down Mike Gorbachev and who teamed up with the Pope and Lech Walesa as the triumverate brought down the Soviet Empire. He was as occult as a Volkswagen stuck up an elephant's rectum and if you think an elephant would ever stand for that, you're nuts. Never happen. Maybe the front fender but not the whole bug. Trumpet that, Brothers Lloyd and Stair.

Get a laptop, a barbeque grill, a car battery operated refridgerator,
a car battery for your radio, a shortwave radio, and a small generator
(to charge all the batteries). With those items, life after a storm is
no great problem.

I've been through three storms now. After the first (Hugo), I was
well prepared in advance and the other two were almost like a vacation.
I sit around eating steaks and hamburgers, talking on my radio,
listening to music on the SW, and playing computer games on the laptop.
I was having such a good time, I was almost sorry to see things get back
to normal.

Just a little update on this - and hopefully someone can further refine the dates when morse was eliminated - I joined the US Navy in 1967 - and became a radioman (since my other options were either a 6 year commitment for communications technician or electronics technician, or become a hospital corpsman which they deperately needed in Vietnam). They had a morse code requirement which at the time had either been dropped to 16 WPM or dropped down from 16 WPM. Which, I cannot recall as I turned in one page of perfect copy at 40 WPM and was promptly dropped (passing, of course) from the class. In 1967 there was a code requirement but it was being phased out at that time. I heard a lot of complaints from radiomen that had their high - speed endorsement (which meant extra pay IF they used it in their job) who were NOT being utilized. At that time, teletype had pretty much taken over most of the traffic (electronic encryption being applied, naturally). I wish I knew when they dropped all requirements, but I can assure you that there WAS a requirement in 1967 which was in the process of being watered down, eventually to be phased out. Quite frankly, there are digital modes which can result in perfect copy in conditions that I doubt morse code could be copied (at least by a human) at any reasonable speed (say over 10 WPM - which is very slow). Hopefully, all of us can get beyond the realization that it is over - CW as a requirement is done - and get on with our lives.

This is the silliest thing I ever heard in my life. I have, in the
past, turned in perfect typewritten copy at 40 WPM. Why would I use CW
for some covert communication? That is stupid. I guarantee you, if I
wanted to send a covert message (which I don't), I wouldn't use CW.
You wouldn't - and couldn't - find my signal. You would likely not
even detect my signal, unless you were right next to me. It is called
spread spectrum. Another alternative might (for reasonably short range
communications) be high speed encrypted burst ascii (say at 1.5
megabaud or so). In any case, I can't imagine anyone so stupid as to

use CW for 'encrypted' messages. Sounds too much like someone who has an ax to grind over CW.

Whoa! Cecil, "rotation of the earth"??
You're holding a 1X3 callsign and if it's not a vanity callsign it means you're at General class or above. You should know better.

Even a small mirrored surface will appear bigger and brighter when reflecting adequate sunlight; similar to the way a flashlight shone at you in the dark appears much bigger than the actual lampbulb might suggest. As for someone reading it, they only have to *see* it's being sent-- Search and Rescue can then bring others in to read you, assuming extraction may be prolonged by difficult terrain,etc. Sure, if you couldn't be rescued post-haste you'd expect food,etc. to be dropped. But correctly sent (and read) it could allow other needed supplies as well. Imagine you had a companion with you who was diabetic: Along with food, insulin and syringes could be dropped as well that might save his life while you had to wait for extraction. There are many possible reasons-- imagine your own. Rotation of the earth is a non-issue as any plane low enough to read you would be more troubled by it's motion relative to you, rather than your rotation about the earth's axis.

This leads to the real value of CW: It's the only "language" that can be sent wireless, sound, light, or other uncoventional methods that allows for accurate, remote transmission and reception of data in even the most primitive and hostile enviorments and almost anywhere on earth.

Could you easily invent (make-up) another? Sure, but it would lack CW's international history, acceptence and usage. It simply has no real competition. Is it really necessary to pass a Morse test to use your VOX-capable ICOM for ragchewing with your buddies on the local net? Of course not. But like a lot of other things, from Boy Scout manuals to Mom's knitting skills, it represents a body of knowledge which is valuable in it's own right. It's not something to be thrown into the ash-heap of history lightly.

In 1987, my wife and I spent 5 days in a 3 room real-estate office with
30 other people in Cancun,Mex. when hurricaine Gilbert hit. The head of the NWS
at that time classified Gilbert as category 5 (the worst) but said, "That's
only because we don't have anything greater than 5 to put it into." 185+mph
winds make life real simple, real fast. No, we weren't sending morse<grin>.
If you haven't lived through nature as a catastrophe you can have little idea of
just how fast all these tech. toys we "need" can just melt away. If I ever again
have to worry about survival you can be sure I'll bring a radio before I bring a
computer and my old Boy Scout manual rather than " Word 5.0 for Dummies", etc.
Think about it.

Respectfully,

Andrew
KG4JBM/AG

Some people see CW as their only true skill -- they got through the
Theory by memory tricks. They don't realize that being a good OPERATOR
is more important than what MODE they use.

I fly SAR. I haven't heard of Morse being used in a rescue since I was
a cadet in the early 1970s (and THEN it was a "tale from long ago"). In
fact, the only time I ever saw it used was in the movies.

VORs and VORTACS still ident with code, but even back in the mid 1960s they used a recorded voice. I still remember " . . .Pomona . . .V-O-R . . ." and wondering if the guy ever got bored.

Just for you newbies, that ident changed to ". . .Pomona . . .VORTAC . . ." in about 1968.

My point was (is) I've been using International Morse Code for 48 years and I
cannot read Morse code sent by a hand mirror reflecting the sun. How the heck
are you going to tell me you need help? (I'm not saying a CW transceiver might
not come in handy.)

> Could you easily invent (make-up) another? Sure, but it would lack CW's
> international history, acceptence and usage. It simply has no real competition.

Mirrors, telegraph sounders, and tapping on pipes in Morse code cannot be
read by the great majority of hams so it is virtually useless when used
in that manner. (Flashlights at night and CW transceivers might be useful.)

> ... it represents a
> body of knowledge which is valuable in it's own right. It's not something to be
> thrown into the ash-heap of history lightly.

Neither does it have supernatural powers. The Morse code that hams can read
depends on lengths of audio tones. You are simply not good enough with a
hand mirror to send dits and dahs to me across a couple of miles.

> Think about it. Andrew

Wow, words of wisdom from the hurricane himself. :-)

The Navy used to include a mirror in the aviator's survivor kit. It had an X in the center that you could see through. There was a procedure were you aimed the mirror at the sun and held up the other hand and projected the X on the palm of that hand. I don't remember the exact procedure but you somehow lined up the X in a certain way and then rotated the mirror so you could see the object you are trying to signal and the sunlight would be reflected directly at it. The rotation of the earth would have no effect as long as you kept the alignment unless you signaled until it got dark.

I've been a coded ham for 48 years and I cannot read code when it is sent
as taps, can you? How do you tell a 'C' from an 'EIE'?

This is very nice, Robert, but now re-do it without the dashes.
You cannot send a dash when you are tapping on a pipe. I contend
that most hams cannot read Morse code when it is made up of nothing
except dots, e.g. telegraph sounder code. I know I can't.

You really "blow " me away! <wink>. Maybe it's not that I'm not
good enough to send it, maybe you're just not good enough to read it.
Perhaps if I was sending it visually by reflecting the sunlight off a little
MFJ QRP-"Cub" you could read it better: That's a CW transciever,
I believe-- and mighty primitive to boot too. Heck, if the Russian
submariners had had them they coulda banged on the walls of the sub
with the little things.

Hi there!

On behalf of two friends, I am looking for cloning software for the Icom
IC-T2 handheld VHF radio and the Icom IC2100H VHF mobile radio.

All help will be appreciated.

Thanks in advance!

Regards.

Actually, I wondered about this too. The answer would be to vary
the spacing between characters and/or the tone. For instance, if you're
banging with a pipe, Y ou bang the end of the pipe to send a dit and the
broad(length) of the pipe to send a dah. How would they receiver know
which is which? A simple S-O-S would be all the clue you needed.

More wisdom from the voice of the hurricaine,

best not to get sucked into a discussion these lazy morons start on the usenets. fact is they are of the group that wants everything for nothing they were never taught to be responsible people.i for one hope cw testing stays in fact i hope they raise the speed to at least 15 wpm and go back to copy and sending only tests. as far as the garbage on some of the ham bands well.... lets look back seems a lot of it showed up when the testing requirements dropped to multiple guess exams. one can only wonder what kind of low life no coding would let it, hell just listen to 2 meter fm sometime for a preview

Yes, if it is space properly. Same as they use to read it when using telegraph sounders (clicks) instead of a tone.
tap, tap, space, tap, space, tap, tap, space, tap = C
tap, space, tap, tap, space, tap = EIE
Even Boy Scouts used to learn it this way.

Well you would not try or even need to send code with a mirror to signal you needed help. The reason SOS was chosen is because it is easy to recognize the pattern which is in three's. So any signal that comes in three's is considered to be a call of distress, three flashes of light, three gunshots, three bangs on the pipes repeated three times, ect.

what does lazy have to do with it??? CW does NOT indicated that you are
lazy or not, or what level of inteligence you might be at. The vast
majority of Hams agree that CW went out with the dinosaurs.

fact is they are of the group that wants everything for nothing
> they were never taught to be responsible people.

you prove by this statement that CW does not garentee to keep low lifes from
getting licenses! This six-pack mentality is only shared by racist old
farts and trailer park trash.

i for one hope cw
> testing stays in fact i hope they raise the speed to at least 15 wpm and

484. CSI-32 Tone Panel Info Needed

Newsgroup: rec.radio.amateur.misc
Date: 2000-09-11 17:30:48 UTC
From: CPSR <jgoldring@primus.ca>
Message-ID: <qE8v5.1497$Lc.7222@news1.tor.primus.ca>
Source record: 103535
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I am looking to upgrade my UHF repeater's tone panel which is an old Ferritronics slot-card system. I was recently given the opportunity to puchase a used CSI-32 tone panel but the owner could not tell me much about it (it apparently doesn't come with a manual, either.)

I thought that CSI was Communications Specialists Inc but it is, in fact, made by a company called
Communications Systems Inc.

Does anyone know about this panel (capabilities, etc) or could someone point me in the general direction to get information about it?

Thanks.
J.

Now, that wouldn't be a number for the R.C.M.P., would it? Assuming you are not "pranking" us, you should be able to fax yourself, same as anyone else.

Oh really??

That's like blaming your car when "it" hits something with you at the
wheel.

You drive the software and you quoted a lot of extraneous material.

I still contend that most hams cannot read telegraph Morse code
including myself. All that tapping would sound like a foreign
language compared to dit/dah tones.

probably kiss your donkey goodby.

> Perhaps if I was sending it visually by reflecting the sunlight off a little
> MFJ QRP-"Cub" you could read it better: That's a CW transciever,

No doubt a CW transceiver would be much much better than a mirror
assuming someone who knows CW hears you. I would much rather trust
an unlocked transceiver capable of transmitting CW, SSB, AM, or FM
on all frequencies including the local emergency frequencies.

I just don't believe the average ham can read audio telegraph code
much less visual telegraph code.

So you are depending on someone knowing the above and recognizing that
it is a distress signal? I sure would hate for my life to depend upon
such. My unlocked transceiver will run indefinitely on batteries charged
by solar panels. And yes, I have spares of everything. I don't expect
ever to need CW. IMO, anyone who relies solely on CW to save his life
needs to have his life insurance paid up.

I agree that this is what most probably will happen. I also believe
that no Hams of any nation, who post pro-CW messages can stop it from
happening. I have long been a mugwump on the CW issue because
communication licensing can not be based on hobby desires or traditions
alone. The definition of an Amateur Radio Operator is destined to
change. I can only hope that it changes in the direction of greater
technical education.

Hams need MORE license classes and/or endorsements for technical
specializations. Too late to save Morse code.

PS. Why do the different radios come with so much disabled?...
Is it to discourage non-hams from buying 'em as general-coverage scanners,
possibly?...
I'd sure think that most non-techy hams would be willing to pay more to have
the extra capabilities already enabled.

That's not been the case at all around here (the dfw area, where I've no idea how birds learn what owls look like.. I've only seen a couple here in all the yrs I've been alive) at all.... My company, for example, has had the owls over the parking lot for.. who knows.. 5-10yrs.. and before them.. the cars would almost require a car-wash sometimes just to get home because of the birds 'roosting' in the telephone poles.. Since then, it's been a "rare bird, indeed" to find any bird-cr*p on the vehicles at all.. It's the same with a cell-phone tower over here near my house. You'd expect to see some birds up there.. Not so, tho, since they installed the owls.. Hmm.. I assume they're owls, since I can barely see 'em way up there...

What if you could lease/buy an old (currently unused) radio-station tower
out in the 'boonies' which's nearly 500ft tall? Would you still need special
permission from the FCC to exceed the 200ft limit?...
Someone else out there would have already thought of it, I'm sure, if such
isn't either impossible or unaffordable.. just a'wondering...

BD,
If it is a former radio station and the tower is 500 feet tall, I'd
be willing to bet there is already at least one light on the tower
now.
At dusk, it probably still turns on, and then off at dawn. The owners
have been paying for those lights since they bought the station, and
~you~ will if they sell it to you. They'll stay lit until they take
the tower down.

It would be slow and difficult and rather impractical but not impossible to make the flashes one for dit, two quick flashes for dah, but when you are in distress and all you want to do is attract attention you just want a signal of some kind. SOS comes in threes, three letters, three dits and three dahs so three flashes of a mirror, three gunshots, ect. mean I need help.

510. Test equipment for radio test & repair?

Newsgroup: rec.radio.amateur.misc
Date: 2000-09-11 22:18:48 UTC
From: Brett - N7OLQ <brett.miller_nospam_@intel.com>
Message-ID: <8pjlmm$i3@news.or.intel.com>
Source record: 103562

I'd like to get some equipment for general radio tune-up, testing and repair, but I'm unsure which route to go. I really only have a DMM and frequency counter right now. I was thinking about getting a O-scope (maybe 50 MHz), function generator (1GHz), but as I looked at signal generators they cost a lot and most don't go up very high in frequency. I was wondering if it would just be better to bet a used service monitor. I assume it will do the main scope functions and signal generator functions...

I don't know much about various models on the used market. Ebay has stuff from a few hundred to several thousand. It would be nice to get all the equipment without going much over $1000. This is for hobby use only.

Any suggestions?

Thanks

35 years ago would be 1965. I joined the army on June 13th, 1966 as a
radio
operator (MOS 05B). I spent 6 weeks at Ft Jackson, SC learning radio
prodedures, equipment operating, and CW to the required speed of 15
groups (based on groups of 5 random characters) per minute. Since I had
mastered the code that fast, I was sent to Ft Gordon, GA for 8 weeks to
be a Radio Teletype Operator (MOS 05C). We learned RTTY procedures,
more radio equipment (how many folks remember the old AN/GRC-26's or
GRC-46's), and had to maintain the code speed at 15 groups per minute or
better.

I went to Viet Nam in March of 1967 with the 53rd Signal Battalion. As
well
as the Radio teletype and voice nets, we maintained three CW nets. The
OM's
on those nets always slowed down to 15 GPM when a new OP hit the air,
but it wasn't long before we were cruising between 20 - 25 GPM. When I
made corporal in 1968, I had my first Skill Qualification Test and had

to test out at the 'slow' speed of 15 GPM.

Up until I changed MOS to 34H in 1980, I had to take that SQT every year and pass that test at 15 GPM. I still had the 05C4J2H MOS when I changed. I retired from the Army in 1988 and the 05C was still listed as my secondary MOS.

So my friend, I don't know whether the fellow you talked to had any historical knowledge of Army communications or not, but I was there when they wrote the book and I have my official papers to prove it. I didn't pay close attention to what happened to the radio MOS's after I transfered to 34H, but I know what happened prior to that.

My last assignment was with 7th Signal Cmd at Ft Ritchie, MD. I had an E6 and an E5 05C working for me and they both still had to take the SQT. As I was retiring, the Army did a massive consolidation of MOS qualifiers. The 05 MOS's were rolled up into the 31 skill sets and my 34H became a 29J. I can tell you that code was used far after "35 years ago".

>wanted to send a covert message (which I don't), I wouldn't use CW.

See, that's the diabolical cleverness of it; everyone expects a real
covert operation to use sophisticated methods, and so they don't notice
it when it's right out there in the open.

And besides, spread spectrum places requirements on antenna and equipment
bandwidth that isn't easy to meet with simple equipment. But CW, on the
other hand, is just about as narrow band as you can get, and can be sent
and received with very simple equipment.

>... In any case, I can't imagine anyone so stupid as to
>use CW for 'encrypted' messages. Sounds too much like someone who has
>an ax to grind over CW.

The military still uses CW for encrypted messages. You can hear them using
five letter cipher groups almost any time you tune just above 7.4 MHz. Sure,
its WWII stuff, but it is apparently still effective because it is clearly
still in use. Why wouldn't an underworld organization find it to be
effective too?

Notwithstanding Herb's crummy comportment in the past, isn't anyone out there incensed that government action is based on thin air?

The centerpiece of the criminal case--"the counterfeit access device"--doesn't exist and that fact is uncontested. How can this happen in these United States?

No matter what you think of Herb, are you ready to witness someone go down, deprived of his basic guarantees? In turn, is the FCC action, based on a phoney felony conviction, constitutional, fair and equitable?

The two reversed counts on account of fabricated evidence were obvious: with the printout falling, the case failed to rise to the jurisdictional minimum of $1000. The third count, though elementary, takes a wee bit more thought: What and where is the counterfeit access device?

I know of a licensed pedofile who enticed children with his ham radio. Serving time, his license remains undistrubed while Herb's is under siege. Animus aside, we must ask if this constitutes justice.

If there is any semblance of equal protection under the law, Herb's crime in its worst light doesn't touch a candle to the pedofile's. And if the record be scanned, Herb's allegd crime is no felony at all.

Riley, government officials, FCC, Supreme Court justices, where are you?

I would like to add my 2 cents to ham radio. I believe there are a lot of good people that would be interested in the hobby including myself if it was not for all that red tape. I got into CB because all I had to do was go to Kmart buy a CB and talk away after hooking it up. Also I do believe it would invite trouble makers like on CB if ham did the same. But also kind people as well, and you will have to take the good with the bad. If I'm having trouble talking to somone because anouther is being rude all I have to do is cut off the rig and give him a call on the phone if its important. Or I can go watch TV or play on the computer. I bet if people had to take a bunch of tests and fill out all kinds of paper work and then wait several weeks to get a permit to talk on the telephone, very few would have them. Anouther thing I would like to say is I read like in the post below about kids not being interested. A lot of complaints I hear is about kids playing with radios. Not on this NG but out in public and on the air waves.

P.S this post is not directed to the post below but to all posts on the subject.

Hmm... I finally got my books out and found the reference I was thinking
of..
In Gordon West's Extra Class study-manual, it says "An amateur antenna must
be no higher than 200ft" and "if you live within a block or two of an
airport, you may not put up an antenna structure higher taller than 20ft
above existing structure."

Part 97.15 of the FCC regs simply says "(a) Owners of certain antenna
structures more than 60.96 meters (200 feet) above ground level at the site
or located near or at a public use airport must notify the Federal Aviation
Administration and register with the Commission as required by Part 17 of
this chapter."

So....? One of of the actual test answers (according to the Gordon West
book) is
"The structure must be no more than 200ft above ground level at its site"..

Am I confused or what? ;)

Don't know enough about the Navy to help (my dad was Navy early in his carrer, but switched to Air Force mid career). I know when I went to the Army's Signal School in the early 70's (from memory, March through May, I think), code was pretty much gone. At least is was gone in my MOS, and in the two MOS's of my room mates.

Anyway, assuming that all the branches dropped it at about the same time, it looks like it happened sometime in the very late 60's to very early 70's. So, I guess 30 years ago would be a better estimate.

It's moot since very few people know code.

If you can save your own life and a bunch of other hams,that's cool.

But please don't get upset if I decode not to be rescued. The thought
of spending the rest of my days in a fallout shelter...with a bunch of
procode hams is very disturbing to me.

I bought these from a man who got them from a auction of a radio shop.
They are 386 computers with the following directories: General
Electric, Kenwood, and M....(cant say the name) RSS installed on them.
I am asking $90.00 each for them. I bought 7 of them from him.

Thanks

Sure, but how about a more relevant obstacle... like making the written tests a lot more difficult? I mean, having to learn how to type doesn't keep the idiots off Usenet, does it? :-) Morse code is just another way of communicating, and let's face it, even in a time of national or international emergency, what could possibly screw up the airwaves so bad that only CW could get through?? Hell, even a nuclear war is only going to create problems as long as the bombs are actually going off.

I vote for abolition of the morse code requirement and doubling of the difficulty of the written tests. Morse code is essentially obsolete, electronics skills are most certainly not!

BD,

As I understand Part 97 concerning antenna height, you are still limited to <200' *without* prior approval. The approval that you would need has to come from the FCC and *also* the FAA, I believe. Unlike restrictions on height in other radio services, like CB and FRS, the rule governing ham tower heights is concerned with aviation safety, not radio propagation/interference. Since the tower is already there, and has existed for a number of years, I would think that the site and height are OK as far as the FAA and state/local aviation authorities are concerned. Pilots in your area are already well aware of the presence of the tower, and it seems from your description that is is well marked and lit.

As long as you maintain it, keep it lit, I don't see why you can't use it for ham service. You will have to go through the formal application and approval process. In addition to Federal authoization, you will almost certainly need a permit (requiring annual fees and inspection) from your county and/or city engineering department. I suggest you contact ARRL for further information and assistance, as this is a subject rather fraught with technical and legal considerations. ARRL should be glad to help you.

I envy you already. Your beam atop that monster should give you at *least* another 10 dB gain on 20-meters over any other ham tower in production. Let's see, that tower is over three-waves high on 40-meters, for 20-meters 7.25 waves high, 14.5 waves for 10-meters! Too bad you don't have 2 of them, then you would probably be the only ham with a 160M dipole in the world up a *full* wave! Still, you can shunt feed the thing as a 5/8 wave topband vertical! Good luck, I really hope you succeed with this!

Read all that again, Tony, and see if you can see the difference.
But, you are partly right about one thing, code was eliminated as a
training requirement about thirty years ago, not thirty-five.

By the way, I noticed that you switched from describing how you used
morse code in Vietnam during the late 60's to later talking about taking
a skill qualification test. When did you stop using code as part of
your job (not hobby use - actual military communications). I dare say
it was long before you got out of the Army in 1988. In fact, it was
probably not long after you left Vietnam in the late 60's.

All this talk about dead soviet submariners, code and John Denver made
me want to reflect with nature. I took a walk down to a very nice beach
in Pacific Grove Ca. John Denver's plane crashed there a few years ago.
As I sat on a rock and gazed over the ocean I heard tapping.
tap
tap,tap,tap

On and on it went and then I realized I was hearing morse code.
I pulled out this oldclipping from boys life magazine about the cave
men and their morse code. It was a little decoder chart.

Tap,tiptapatiptapatptaptaptap.

I then saw the fiesty sea otter swimming on his back with a shellfish on
his tummy and a rock in his claw.

"tap tap tapataptaptaptap!!!!!!!!!"

"What Do you want Mr. Otter?" I said.

The otter tapped back.....

"Do you have any cocktail sauce dude?"

Go to the next gun show in town, someone there will be selling the Chinese single shot pellet gun for around $20.00. This little beauty sends a pellet on it's way at about 800FPS with a single pump. Deadly accurate and nearly silent. I have pelted coyotes in the hindparts at 50 yards and you could still hear them yelping for the next 10 minutes.

The "red tape" is to validate the qualifications, minimum as
they may be. The important thing and one to which I am
comitted is to have the "red tape" (i.e. the test requirements)
be justified and the reduction of code testing to 5 wpm
is but one step towards that aim. The code test will
not likly go away completely until there is a change in the
international treaty. I believe your comment is not intended
as a desire to have NO ham requirements, and I hope you
concur that rational and justifiable requirements (that red
tape) are the reason ham radio is not CB.

>I got into CB because all I had to do was go to
> Kmart buy a CB and talk away after hooking it up.

But hams can actually build, repair and adjust their
own radio equipment which is not something CB oerators
can legally do. Hams are allowed HIGH power (1500
watts) while CB is limited to 4 watts. Those two aspects
justify the need for the red tape.

> Also I do believe it would
> invite trouble makers like on CB if ham did the same. But also kind people
> as well, and you will have to take the good with the bad.

Sorry, I must adamently disagree with that prospect. As much
as I oppose the need for morse code testing, I am equally
committed to NOT turning ham radio into a no test CB type
access.

> If I'm having
> trouble talking to somone because anouther is being rude all I have to do is
> cut off the rig and give him a call on the phone if its important.

Do you have the phone numbers of every ham available? That
points out another major CB vs Ham difference. Ham radio is
global and not limited to short distance rudeness.

> Or I can
> go watch TV or play on the computer. I bet if people had to take a bunch of
> tests and fill out all kinds of paper work and then wait several weeks to

> get a permit to talk on the telephone, very few would have them.

Probably so, but there is NO need for a license to
use the phone because there is NO public need for
anyone to have a license.

Additionally, the phone companies look after
all the problems for which you and I pay
monthly costs and per call usage fees.

Cheers,
Bill K2UNK

You can take over that tower with the proper paperwork, but you are responsble for it.

If they retain ownership, you can install an antenna on it or use it as an antenna without problem. The purpose of the rule in part 97 is to make sure the FCC knows about any new structures or changes in structures that might create an aviation hazzard.

They wording implies you need their permission to use the tower for amateur radio, but the fact is they care less unless the tower becomes yours or it is a new structure...or you alter its height.

I have a 318 foot tower here, registered with the FCC and FAA, because it was a "new structure". Below 350 feet you need a side marker and a top beacon and paint, or a strobe system. At 500 feet, you need multiple side markers and beacons at half and full height. Expect a big electric and maintanence bill if the tower is over 350 feet.

BTW, I consider my 300 foot tower one of my poorer Ham investments....except a commercial company now has offered me a sizable amount of cash for a ten year lease, plus a monthly lease fee for the property it is on. They are willing to pay it all up front in cash, and allow me to continue to use the tower. I'll make about 2500% profit on the tower if I take their deal. Not bad for a two year investment.

Motorola will pay me $2.25 per foot per month for antennas at various heights on the tower, if I keep the tower. They want to install two antennas for now, one at the top and one at 250 feet.

So the tower could be an investment. I like to think of them as "money trees". Just be sure there is some demand in your area.

Gunner,
Since we are all speculating here... what if the person is running high power and is blasting through his neighbor's TV? You know how cranky folks can get if they can't watch..."So You Want To Be A Bazillionoire". We had asomeone in our neighborhood whose radio was so bad it came through on my son's Electric guitar.
Now that was strange.
Russ
PS
If you are going to play, at least be subtle

It's not like I wish to hurt these people nor do I want a chunk of the ham band taken away. All I want is the FCC to see code for what it is now, an old past time, a nifty novelty.

Correct!

I know of several repeaters with antennas on 500+ foot commercial towers. Some are there "pro bono", some are required to "contribute" to the lighting/painting fund, as spelled out in 47CFR17. (Multiple users are permitted to "share" the costs of keeping a tower compliant with FCC/FAA regulations.)

The "200 foot reporting rule" applies to NEW antenna construction, or modifications to an existing antenna structure which would add to its overall height above ground, if the new height iwould be over 200 feet AGL.

200 feet AGL is the REPORTING limit only at distances of more than 10,000 feet horizontally from the nearest approach of a licensed airport, heliport or aircraft landing area. In case of antenna structures CLOSER than 10,000 feet, those less than 200 feet MAY be required illuminate/paint. Antenna structures all the way down to 20 feet AGL located in and around aircraft landing areas are required to be painted/lighted!!!

BTW, One night when I took a 50,000 watt FM off the air for "maintnenece", I hooked my IC-02AT up to the feedline (no easy trick, since it is 3-1/8", gas-filled coax <grin>)and the 4-element FM transmitting antenna at 535' AGL, and HAAT of 1,309 feet. I HEARD repeaters in 5 states and one Canadian province. I'm sure I KEYED more than I heard!!!

Never got around to figuring out how to couple an HF rig to that tower, but I did try 160 meter reception on a 3-element directional AM array with disappointing results, probably because the phasing was all wrong and the pattern (maybe I should run it through my famous Excel spreadsheet!) pointed where nobody was on. Or maybe everybody had gone to bed at 2AM on a Sunday night <duh!>.

And the 11 meter CB band is the perfect example of what happens when no one has to invest any effort in being allowed to operated on the air. Guess you would like the ham bands to become the sewer pit of the air waves that 11 meter is too. He obviously feels that getting a ham license isn't worth the little trouble it takes to study some theory and learn some rules and regulations and be willing to abide by those regulations. It is that "red tape" that separates the ham bands from CB. And yes you can point to some bad operating by hams on the ham bands but that is limited to a few frequencies, but tune ANY of the CB channels and you will find bad operating practices. I am not sure by what you mean the hams don't use *nearly* all of it, the bands sound pretty full to me and so what, it is allocated to the amateur service so if you want to make use of it get off your butt and be willing to put in a little effort and get a license instead of crying because it isn't free. Try stepping out of the welfare mentality for a change.

Of course it could if it was prearranged and practiced. But, out of
the blue, I seriously doubt that I would associate a scrape or three
very rapid taps with a 'dah'. Hams who think telegraph code and
radio code are interchangeable simply have not thought about the
subject in any depth. Hams who are staking their lives on being
able to communicate by tapping on something or using scrap pieces
of metal to reflect sunlight are virtually unprepared for emergencies.

The Strategic Air Command Memorial Amateur Radio Club will be on the air for this event from the floor of the Strategic Air Command Museum in Ashland, Nebraska. We will operate 9 AM to 5 PM Central Time on Saturday and Sunday, September 16th and 17th. We will be using the Nebraska callsign of the late former CINCSAC, General Curtis E. LeMay, K0GRL. We will be giving out an AF53 exchange, and 100 bonus points, for this event.

We would also be happy to take a few minutes during this slower-paced contest and on-air reunion to talk about your experiences in SAC, or in the USAF, with our operators and museum visitors. As we will be operating from the museum floor, we can also answer any questions you may have about the museum's excellent collection of SAC aircraft.

Hope to see you on the air, and please check out our club's home page at:

http://www.sacmarc.org

I believe you can still have the rules with out all that red tape. If I wanted to I could go through all that trouble to get my ticket and still act like an donkey on the air. once they found me then it would be over. But I just dont see how the red tape is going to stop the affenders. What you need is more enforcement. Like maybe let the local police help out when their are complaints, if the FCC does not have the manpower. and Yes the knowledge to tune your own radio would be helpful but their will always be people that will do that for you for a few bucks. As for the telephone yes the phone company would deal with morons. and the gov. would deal with them on the air. and we all know how they love to spend money.

First I never said anything about requiring anyone to build a radio, but if you are going into a hobby that allows you to do so and put it on the air, you need to pass certain minimum requirements that you have some knowledge of what you are doing. How about not requiring a driver's license or age limit to drive a car, just let anyone go buy a one and get on the road, no testing of highway rules or driving skill. Do you have a driver's license or did you think it just wasn't worth the trouble. If you think the requirements for getting a ham license is not worth it to you, fine, I have no problems with that, but don't whine and cry because it isn't going to be given to you just because you don't want to meet some minimum requirements.

I threw the coins on your message and obtained hexagram 65:

Wang Tung: The Atrocious Grammarian

The upper trigram is Hung Pu, The Constipated Orangutan; the lower being Wong Flap, The Crane With Clipped Wings; therefore the image is that of an unfortunate attempt that fails.

This suggests that one study the protocols of the medium utilised for communication so similar mistakes are not made in future. The nine in the third changes the hexagram to Chop Spam, The Inept Scribe, which suggests that your ISP will soon send you a message informing you that your internet access has had a very bad day and has sadly sickened and died.

Sent via Deja.com http://www.deja.com/
Before you buy.

<snippage>

Having a radio go through a guitar amp isn't all that strange. The guitar player in my band (back when I was a wanna-be rock star) had that happen a couple of times. Once was a police car several hundred yards away, came through clear as a bell. The other time I know of was either a cell phone or (more likely) a cordless phone. I forget the brand name, but it was a large tube amp. So it isn't unheard of. By the way, he lived about 400 yards away from me in the middle of nowhere (we were the closest neighbors to each other) and I ran 100 watts at HF, and it never came through his amp. He would have told me if I was, he knew I was a ham.

The CB got it's reputation from the movies.
Short of some glamour movie with hams tapping away to save the
president; I doubt relaxed rules would cause a mass exodus to ham bands.
It just won't happen.

You have semi controlled access to you repeaters, you can police that
can't you? The cost of gear is enough to keep most lowlifes from the cb
away.

The vast majority of those in the professional communications business
are starting to view hams as spectrum hogs.

John Doe wrote:
> I believe you can still have the rules with out all that red tape.

I must still disagree as the range of permitted aspects of amateur radio
transend the possibility of a "no license" approach. High power,
build your own equipment, etc. all demand more than just a "mail
in your name/address" approach to licensing.

> If I wanted to I could go through all that trouble to
> get my ticket and still act like an donkey on the air.

Yes you could, but that doesn't happen anywhere near as much as
can be found in a no license arrangement.

> once they found me then it would be over. But I
> just dont see how the red tape is going to stop the affenders.

It matters not IF it does or why it does. The reality is
that on a comparitive basis, amateur radio (a licensed
and tested service) has far less rule breakers than does
CB radio. So it isn't a matter of debating IF licneses
and license testing will stop offenders, it is
absolutely the case that it does. Is it 100% perfect?
Not at all, but it has a far better track record than
CB does.

> What you need is more enforcement.

The FCC already lives with their CB nightmare as
to rules enforcement and has pretty much abondoned
enforcement except in the most egregious (sp?)
cases...usually of interference. Ham radio
has its own (small) group of offenders, but they
are much easier to find and reel in by the FCC.

> Like maybe let the local police help out when their are
> complaints, if the FCC does not have the manpower.

The LAST people you want enforcing radio rules is
your local police. The local police have ZERO
knowledge of such enforcement and they have no real
interest in getting involved anyway...(far more
glory in solving homicides and drug busts than
radio interference complaints).

> and Yes the knowledge to
> tune your own radio would be helpful
> but their will always be people that
> will do that for you for a few bucks.

The fact remains that hams are allowed to make
those adjustments themselves and that is one
reason for testing. No testing, no allowed use
of self tuned equipment. What you are proposing
is a different type of service. Perhaps you
should try GMRS, FRS, etc.

> As for the telephone yes the phone
> company would deal with morons. and the gov.
> would deal with them on the
> air. and we all know how they love to spend money.

If THEY means the FCC, the fact remains that
the FCC has a limited budget and ham radio
generates NO government revenue to pay for
any enforcement.

Exodus from where? If you mean from CB, as soon as the word's
out about repeaters and genuinely useful coverage areas
vs. CB's pathetic range, you'd better bet there would be a mass exodus
from CB to ham radio. You can only hope it would be the better half of the CB'ers
fleeing the bottom half. As it stands, written tests keep out *some* of the lazy
and stupid ones who might otherwise get in.

>

Think again. Look at how many FRS radios have sold since they were
introduced just a short while ago.

>
> You have semi controlled access to you repeaters, you can police that

You try "enforcement" sometime. Local and state authorities are
(properly) not interested in matters like this which are
totally outside their jurisdiction anyways. The police (should) have way
more important problems than annoyed hams to cope with.

That leaves the feds, and basically this means the FCC.
The FCC takes literally years
to act against jammers and bootleggers, even when there are extensive
tapes and direction-finding evidence gathered by hams to catch the
miscreant. I know of one rare case
where a jammer in this area actually was convicted and did prison time,
but the case against him -- and his jamming -- went on for years. Last I've

heard he's out and back to old tricks.

It all started with a *borrowed* radio, with which he caused an unbelievable
amount
of trouble (even hampering firefighting efforts during the big Oakland hills fire
that claimed so many lives and homes). Another repeater jammer who also
liked to interfere with air traffic transmissions, got time, if I remember
correctly.
But for jamming repeaters -- you get away with it for years. :(

Besides, just because someone's a lowlife doesn't mean they don't have
money. Look at Shrub Jr. Besides, there's a lot of ham gear
stolen every year. Some of it surely ends up being used, and not
by licensed amateurs, either. Some people refer to "CB" as Criminal Band.
From listening on occasion with my HF receiver, it's criminal they don't
shut down the band and set up all arc welders to operate on those frequencies.

The only way ham radio is going to be able to cope with relaxed rules
is with a technological solution which can "lock out" certain users or
transmitters once they start to abuse the bands.

-- Ross

>
> The vast majority of those in the professional communications business

That's funny. I would think dedicated frequency assignments for
a local school or other very-low-traffic user would be at *least*
as wasteful, yet you see that all the time where trunking isn't used.

UHF CB aka GMRS never turned into a cesspool. FRS has shot a short range
that interference between users is short lived. I agree that 27mhz is
garbage.

The bottom line is the spectrum is now worth big money. You can easly
lopp off 2/3rd's YES 2/3rd's of the ham spectrum and not greatly impact
the current users. The FCC knows the hams will comply if told to leave
so it would be a slammdunk.

Hams need to justify the holding of all that spectrum. Forget the code
b.s...they want your main resources...spectrum.

better get orginized folks cause the boogy man is coming and Rielly H.
won't be able to help you.

Cool.

I was a cadet in CAWG about 25 - 28 years ago, was away from CAP for a couple of decades (active with other agencies), then came back in in AZWG in 1994. Currently in Utah, not active while I get things shuffled around, soon back with it.

Dan, Thanks for weighing in. Knowing these cases are just a means to an end, can we, nontheless, view them as an issue of justice? Can we count the rights of others as important as our own?

If we can, as our Founding Fathers designed the system, the conclusion is is ordained. KV4FZ's is no crime without the "counterfeit access device." On its heels, the FCC's case against him as a "convicted felon" falls too. As a society, will we do the right thing?

News readers have written me that there are two known convicted child molesters whose licenses remain undisturbed--twice the reason, above all else, Herb shouldn't be singled out for the worst punishment a ham can suffer.

Or, in other words, the effort wasn't seen as cost-effective.

Which is why you don't have a doctorate.

I agree, but you must seperate Herb from the case, if possible. And
not likely able to be done. Herb has basically brought all this on
himself. I see no way out of his present situation.

As for will he get justice? I doubt it. Why? Because the he
is 'politically incorrect'. Welcome to the USA of the 21st century.

578. FS: Hallicrafters S-76 Rcvr

Newsgroup: rec.radio.amateur.misc
Date: 2000-09-13 00:00:00 UTC
From: Walter Treftz <boomer1@hitter.net>
Message-ID: <39BFC1DF.BBEF6A50@hitter.net>
Source record: 103461

FOR SALE

Hallicrafters S-76 receiver:
1) As part of an estate e.g. we're just handing the
deal. Therefore, untested but looks OK.
2) Original black paint
3) With repo manual (I think I saw one at the
club that would go with it)
4) Has all tubes
5) All knobs
6) Good cosmetic condx (needs cleaning as been
in storage)
7) All controls work (none binding, frozen, etc)
8) No rust, dents, scratches, etc.
9) Original AC cord.

Price $190 or best reasonable offer plus shipping
costs. We can "probably" find a box locally and if
so, can come up with bubblewrap, styrofoam, etc
and pack it at no additional cost.

Sorry, princess, but that *is* the difference. Theft implies that the owner no longer has physical possession of his/her property.

The constitution allows congress to enact copyright laws for authors "to promote the progress of science and useful arts." *Not* to protect the profits of corporate entities or of any other special interest group.

Some hacker from Norway has been posting code that allows the viewing of DVD videos on Linux systems. The makers of DVD disks rigged them to only be viewed on Windows systems, and are suing anyone who spreads the word about this code, including a guy who even printed the code on a T-shirt! It turns out that when you buy a DVD, you're not buying the DVD, but only a license to use it.

People are fed up with this crap, and they're rebelling. It's not about to stop anytime soon.

I ain't Gunner but here goes my take on it:

You follow the instructions on the FCC website for filing a complaint.
Normally, the only way you're gonna get the cops involved in that one is
if you escalate it into a disturbance. They might try to talk to both of
you to keep it from going that far, but they'd have no way of knowing if
the guy was running high power or not, if he was legally licensed to run
high power or not, or if your equipment was faulty or not which is the
cause of the majority of interference problems.

I hate to cross post like this but I think the topic of this mesage warants it.

Has anybody tried to build a basic radioastronomy setup with cost minimization in mind?

I (and possibly some other people, if I can convince them that this can be done cheaply) am looking to build a small setup to do drift scans on the neutral hydrogen line around 1420MHz. The catch is that we are students and as such, we do not have a great deal of cash on hand. Our key problem is the lack of cheap recievers in that frequency range. I've only found 2 and both are $2000+. Can anyone offer some suggestions?

As for the rest of the equipment, between whatever money we can scrounge up and our talents as a bunch of engineering students, I think we have it covered.

Good references on the subject of rolling your own radio astronomy setup and any other thoughts would be appreciated.

Thanks,

590. ABW++, second look

Newsgroup: rec.radio.amateur.misc
Date: 2000-09-13 00:00:00 UTC
From: J Tabor <denews@taborsoft.com>
Message-ID: <srvs4j9pct6159@corp.supernews.com>
Source record: 103473

Greetings,

Active Beacon Wizard++, update available. There are only a few changes in this update.

Anyone that looked at the previous version, but time ran out, here is a second chance.

Briefly:

ABW ++ displays the currently active NCDXF beacon over a topographic map, along with the solar terminator. Tools for setting the system clock, via the net, are also provided.

ABW ++ will also download and display up to fourteen selected Space Environment Center (SEC) solar reports and forecasts. In addition, ABW ++ provides the comprehensive SEC glossary of solar terrestrial terms. This glossary, along with report explanations, is provided in windows-help-file format and may be of useful when interpreting the propagation reports and forecasts.

Here's the web page:
http://www.taborsoft.com/abw/

Regards,
Jim - KU5S

Nobody is cross posting your posts, you are doing it yourself. It is obvious
you don't know how Usenet newsgroups work. Here I'll paste in the header and
you can see for yourself which newsgroups you are posting to. Notice the last
lines where it says Newsgroups followed by the groups you are posting to.

What safety aspect. You're not really gonna go *there* are you?

Chainsaws, electric hair dryers, microwave ovens, golf clubs etc....

Look, there was a valid reason in the past for testing and code. The
hams were the kinda of the "rescue rangers" of the airwaves. Now there
are plenty of non hams on non ham frequencies that do what hams have
done. You don't need hams to make skywarn work. If you dropped some red
tape you might be suprised at the quality of volunteers you get to help
out with club projects.

jus about nobody builds a radio from scratch, most folks can grasp the
concepts of buttons and readouts and most will learn not to place their
tounges on the center antenna conductor while transmitting.

Cut red tape...
Get some new members fast...
Of start loosing spectrum.

You have to please "da man" or else...

You know, I own several licensed copies of Vertex RSS products. Why? Because they were priced at a REASONABLE level. If Motorola doesn't want their RSS "shared" between two parties then they shouldn't force us to get out the Vaseline everytime we buy a licensed copy.

I'm sure when you have a Saber, you'll call up Motorola and buy that legal copy of RSS too. We can all sleep better now, thank you.

I recommend the VHF-UHF manual by Evans and Jessop. They give
instructions for building everything yourself.

Might I ask why you've chosen the 21 cm line? If you're not planning on
imaging (because you're doing drift scans which don't allow you to
integrate very long to improve your signal to noise ratio and you're
probably not going to use a multiple channel setup to accomodate the
doppler shift of the hydrogen you will be measuring) then what do you
expect to actually "see"? If it turns out that the 21 cm line is too
faint to be detected by your setup, don't despair because there are a
lot of bright radio objects out there that you should easily see in a
drift scan with a reasonably sized dish. The brightest sources in the
3rd Cambridge catalogue such as Cygnus A and Cassiopeia A are good
targets as is the galactic center, Sagittarius A*.

I agree with you - I worked the Echelon stuff for 22 years.
and after I retired, I have continued to monitor freqs.
Amateur radio is a hobby. I copied Herb, and the related activity for
about five years until he disappeared from the screen. He was targeted
by a group that clearly had a hate grudge against him. For the FCC to
take it to this level is no less than absurd. IT PALES COMPARED TO
WHAT THE commander in chef accomplished! I enjoy your comments Bob,
and take care.

Why not just come out and ask if anyone's interested in committing a crime..
stealing something.. robbing a company.. or.....
I'm sure the hardware's also a bit expensive too, so why are you not asking
if anyone's willing to help you shoplift it? They could probably get out
the door with one while you were paying for yours, and then you could split
the cost on that too..
Do you not steal EVERYTHING *only* because you'd get caught?
Maybe I'll call 'em up and let 'em know what you're planning on doing so
they can send you only half the software...

Lets just hold on just a minuet. If the party of the first part and
the party of the second part decide to enter into a limited
partnership and the limited partnership owns the software.
But you can only run it on one machine at a time.

Back off a little on the sanctimonious bullsh*t. Motorola
has screwed more people in the two way business than
a hooker with a pager.

And if you really want to know motorola has a lot of
software and modified software floating around.
ever hear the term "Lab Software".

At the moment with 3 differant suitcase programmers
and a PC to run their crappy software you still do not
have all you need to do the programable radios.

Just My Opinion..

Bob

> rules with out all that red tape.

The license requirement is not 'red tape," John. The exam you take to get that license is designed to insure that you have the basic knowledge to operate a radio safely and that you know the rules concerning that radio operation. The license is proof that you have taken that exam.

This differs from CB because the ham radio service differs from CB. Unlike CB, the ham radio service involves the possibility of very high powered radio equipment, a wider range of technologies (repeaters, satellite, digital modes, microwaves, etc.), a wider range of frequencies and frequency conditions, and a stated mandate of providing emergency communications in time of need.

It is also for these very reasons that rule enforcement is much stronger in the ham radio service.

Dwight Stewart (W5NET)

I recently,along with a friend of mine,passed the Tech class license test and got my license.I had wanted to do it for a long time,but in between all we go through in life at times schedulewise I couldn't fit it in.Finally I did.My thing now though is getting other people in it,which is what I am doing. I am a volunteer firefighter/EMT in Ohio.I am working on getting more of my fellow emergency workers into this.My purpose is one that a fellow ham told me the night I passed my test.Who knows your stations,your equipment,and your procedures better than your own people?If an emergency occurs that takes out communications,every operator you have in a station is one less we have to send there to work.I am currently working with my chief to put a 2m/70cm antenna on our station and set up an access point where we can set up a radio.We already have a 12VDC/12A power supply that runs a mobile 2 way for our fire band,and I can run a mobile rig off of it as well for ham use.I know there are probably a lot of emergency services personnel licensed already,but my feeling is one of wanting to get more Police officers/firefighters/EMTs-Medics in the amateur service.We hams do great in providing emergency communications in time of need.It would be even better to be able to "go direct" with someone if needed.Things tend to get lost in the translation at times and it's easier for a chief,etc. to work with someone they know.But that's just my $0.02 worth.Have a great day!!

There's no crime involved here. Go buy a clue, Sherlock.

Motorola sells the RSS software to just about any person, persons or
corporation in the US who will sign the license. I'm looking for people
who want to co-invest and become co-owners of a legal copy of the
software.

Better yet, if you have a Walmart nearby, just go get the Gamo P-23 pellet pistol. With round lead shot (included, more from Gamo), it is highly accurate and very powerful (420fps). With a half hour of practice, you can easily hit a small animal at fifty to sixty feet. You can even get a laser sight if you need more accuracy (www.gamo.com/ushome.html).

I use it for pest control all the time. At typical distances, it does no great harm to the animal, but stings like heck.

By the way, the Gamo P-23 is a 15 shot repeater (with round lead shot). In other words, this repeater will fire 15 shots, without reloading, as fast as you can squeeze the trigger. Therefore, if you miss the target with the first shot, you have 14 more to get the job done.

Lots of power... no manners, no couth, no brains. After several nights where
this imaginary neibor put the mic on vox. and turned up the tv... it was
discovered that when a handfull of finishing nails get hammered into RG8 coax
while the imaginary owner of said coax was on a beer run... and then returns
home to do some more impolite stuff using LOTS of power.. the radio tends to
let out all the smoke packed into the components. And continued to do so for
some time.. each time the IN (imaginary neighbor) would find a nail and remove
it.. and then key up again.... Seems the IN was not bright enough to use an
ohm meter to check for shorts. Finally realizing it was a coax problem.. he
then replaced it. When his nonsense started up again.. it was found that the
smoke comes out just as well when the coax is clipped in half about 20ft up
the tower, then taped somewhat together so it looks sorta ok from the ground.

Hypotheticly speaking of course.

RIB = Radio Interface Box, i.e., the connection between the computer that runs the software and the radio to be programmed. You can't do anything with the software without the RIB, you can't do anything with the RIB without the software.

I see what you are trying to say but the logic does not make sense. If you want to do it legal their is a lot of red tape. If I wanted to I could go out and get me a ham rig tomarrow without even having a permit and talk away. So what good is all that red tape that you say is keeping morons off the air. CB has strict rules and requirements too. It not the red tape that gong to keep the morons off. Its enforcement of the rules. Plus you do not need a permit to own a ham rig. just one to transmit. All the red tape is doing is keeping the good law abideing people off. If morons want to talk on ham they will with or without a permit.

Didn't the navy use spotlights for ship to ship communications?
A handle on the side of the spotlight would be used to open
or block the light, and it would be controlled with something
like or maybe it was Morse code. Good for keeping the enemy
from receiving the comm on the radio, you aim the narrow beam
at the ship you want to talk with, and presumidly others off axis
the beam would see nothing.

That's an excellent point John. But they may soon find that no one is
talking
back. In most cases the "moron" will only keep transmitting if he/she is
getting responses. (kind of like a troll on a newsgroup). A (good) ham op
is taught early on to ignore these transmissions. It's just no fun for the
illegal
operators if they don't get someone to bite.
And if the illegal op really just wants to make contacts, once again, no
one
is likely to respond to someone without a valid call sign.

Steve

I don't know exactly what code is/was used but obviously lights
would be capable of sending dits and dahs. I can imagine someone
using a flashlight at night to call for help using Morse code.
If I remember right, it happened fairly recently.

My point is that a method, like tapping or mirrors, that has no
natural way of sending both short and long sounds or pulses, is
virtually useless during emergency attempts to communicate with
hams who generally know only radio Morse and not telegraph Morse.

No, dummy. Perhaps you could ask some 12-year-old to get out the
dictionary and read you the definition of the word "partnership."

Motorola's license agreement permits use by partnerships, and for any
number of radios.

If you really had any "experience with Motorola," you would have known
that.

> I see what you are trying to say but the logic does not make sense.

It matters not if there is a logical defense, the
bottom line is that the reality of history has
shown that it (testing) is valid and works.

> If you want to do it legal their is a lot of red tape.

If passing a relatively simple test is "a lot
of red tape" then I wonder what it is you
really want. Indeed, my presumption of your
several postings over the last few days seems
to indicate (IMHO) that you want a NO test
license or perhaps even a no test/no license
amateur radio service.

> If I wanted to I could go
> out and get me a ham rig tomarrow without even having a permit and talk
> away.

You could try that, but you'd be caught at it.
Hams do not support such "pirate" operators.
Could you get away with it for some time? I guess so,
but you'd be a rogue operator and never accepted
by licensed hams and, more likly, pursued (
justifiably so) as a law breaker.

> So what good is all that red tape that you say is keeping morons off
> the air.

Let me make this perfectly clear. The "red
tape" you complain of (as minimal as such red
tape is) does work. It ain't perfect, but
just compare the CB land free for all frequencies
to ham bands and you can come to no other conclusion.

> CB has strict rules and requirements too.

Of which the FCC does nothing except in the
most severe cases. The FCC has abondoned CB
as far as rules enforcement (IMHO).

> It not the red tape that
> gong to keep the morons off.

Again, history proves you wrong on that point.

> Its enforcement of the rules.

Enforcement is absolutely needed to go
after the real offenders. Ham radio had
some real bad apples until a year or so
ago...BUT they were easy to identify BECAUSE
they were licenesed. The FCC began cracking
down and the worst are gone and many other
border-line cases have cleaned up their acts.
On CB, the FCC doesn't even know the name
and addresses of those that operate legally,
much less those that operate above the law.

> Plus you do not
> need a permit to own a ham rig. just one to transmit.

True. Your point to that is what?

> All the red tape is
> doing is keeping the good law abideing people off.

So how come there are over 1/2 million hams
of all sorts of backgrounds that managed to
get by the "red tape". Truly you can't
suggest that a single test (to get a technician
amateur license) is too much red tape for you?
But then, maybe you do and, if so, that is truly
a sad commentary on your personal commitments.

> If morons want to talk on
> ham they will with or without a permit.

They certainly can, and they will also then
face heavy fines and/or jail time. I'll happily
join in the pursuit of anyone that does so.

No cheers,
Bill K2UNK

> their are a lot of hot heads out their that would give them what they want.

Again, I point to history of ham radio which
has a track record of total opposition to
"pirate" hams on the ham bands. There has
been no such sub-element of "hot heads"
out their that would give them (pirate hams)
the time of day. More likly, the vast majority
would help "nail" the moron/pirate ham.

Cheers,
Bill K2UNK

Va. Code ï¿½ 1-13.19. Person. The word "person" shall include any individual, corporation, partnership, association, company, business, trust, joint venture or other legal entity.

So, if an individual can own a license, so can a partnership or simply a joint venture.

A typical Grant of License reads "This license agreement permits you to use one copy of the programs included in this package on a single computer. The software is "in use" on a computer when it is loaded into temporary memory (e.g. RAM) or installed into permanent memory (e.g., hard disk, CDROM or other device) of that computer. ... (goes on to discuss network licensing)." This implys that it is completely legal for two or more individuals to buy a software package jointly and a: each use it on as single computer or b: on seperate computers so long as it was "in use" (as defined above) on only one computer at a time (i.e., each partner could have a copy of the software on a floppy so long as only one of them put it "in use" at a time.

> . All the red tape is
> doing is keeping the good law abideing people off.

How is that? First of all it isn't "red tape", it is the requirements to obtain a license, which anyone with a little initiative can easily do. The amateur service allows those who are licensed to build and modify their own equipment if they choose to do so, however it isn't required (name some other radio services that allow this). Because of this the testing is to establish that the person requesting a license to operate in the amateur radio service has at least a basic understanding of theory and knowledge of the regulations so that if they do choose to construct a transmitter, they will hopefully have the knowledge to unsure that it will meet certain standards and not interfere with other services. Why do you think that radios used in the CB service must be type certified to meet certain FCC required stability, emission, and power output standards and no modification is legally allowed? It is because there is no "red tape" (requirements) to operate in the CB band thus anyone without the slightest knowledge of radio theory can operate there. Unfortunately adhering to those standards doesn't happen that way in CB and that is why the CB band is the sewer pit of radio communications and the FCC gave up on any enforcement except for special cases involving severe interference to other services. All one has to do to get on CB is run down to K-Mart, purchase a CB, hook it to an antenna and start shouting "aaaaaaauuuuuuuddddddiiiiiiooooooo!!!" If passing some simple requirements is just to hard or those requirements are just not worth the effort to you to have access to the ham bands, then the CB band should work out just fine for you, but don't whine and cry and expect the privilege to operate in the amateur bands to be given to you without some effort on your part., just as many things in life come only after putting forth some effort.

I have for sale a matched pair of Svetlana 4cx800a tubes. These tubes are Soviet military surplus, and are very rugged well made tubes. These tubes are in great shape, they have NEVER BEEN USED. These tubes will produce as much wattage as any Svetlana 4cx800a sold by any tube distributor, period. The tubes do have a 90 day warranty.
The price on the matched pair of 4cx800a tubes is $200.00 plus shipping.
The price on the 4cx400a tubes is $90.00 each plus shipping.
I also have the SK1A sockets for the 4cx800a tubes. The price on the sockets is $39.95 ea. plus shipping.
Thanks for your time.

So you're saying if I had a CD nearly full (580Mb) of recent to old software (including many labs and tools) from most all brands for sale or trade, and people could just email for a complete list, it would not be a good thing??

Put up a statue of a great horned owl on the antenna - that should keep them away. Another solution may be to hang strips of cloth from the antenna and tower - one Expedition did that.

Hope the suggestions help.

Not necessarily. I got mine used.

I don't have a problem with Ma Batwings making money on their software.
I just wish that they sold it for a reasonable price. If it were under
$100 (from THEM, not from a bootlegger), I would have no compliant
whatsoever. As it is, I find it hard to pay $350 for software which I
will use maybe a dozen times, all told.

I am also considering buying the software and doing programming for,
say, half the price of other local providers.

You have hams usuing 100 watt microwave radios?

Do tell, cuase i'm willing to call myself stupid. The max the units I
use in 2ghz are limited to 10 watts. But if you say hams are allowed to
blast 100 watts on a microwave frequency I guess I would have to agree
that there is a safety issue.

So what do you get to do with 100 watts on a microwave freq..
I bet it's great for those short intercity hops :0.

Source record: 103350

* * * C A U T I O N * * *

RE: SELLER "MULTICOMM2000" (Martyn Allison)

Dear Buyer:

I will try to be brief.
I was a bidder on Martyn's "Yupiteru MVT-9000 MKII" back in early June. I was not the final bidder. However, thru e-mail Martyn told me he was going to England in a week and was bringing back 12 more.

Long-story-short….
On June 13, 2000 -- $473.93 was charged to my Visa acct. to "Multicom2000 Ltd." Huntingdon, GB (which I later learned is Martyn's company in England - which he is closing).
web address: http://www.multicomm2000.com/page2.html

He said he would ship item upon his return (3 weeks).
It is now 3 MONTHS latter… No item…. No more e-mails… No nothing…'till now.
Martyn has suddenly posted 101 items on e-bay. When I e-mailed him that I was writing this note to his bidders I finally got a response.
Basically: …Hold off for a week… he'll look into it.
By that time, you will have sent your money. Good luck.

Moral…
Be very very careful - especially with large amounts.
Use an escrow service if possible.
Above all: Proceed at your own risk!

Finally…
I'd be happy to answer any questions or forward any e-mails I have had with Mr. Allison.
E-bay and these newsgroups are a great marketplace ….Don't get burned. I did.

Hope this may help someone.

Sincerely,
Paul Cecchini
Chicago, IL

If you do not want to crosspost to a bunch of groups, double click on the post you are replying to, and delete the other groups. You *are* crossposting because the posts you are responding to have been crossposted.

For instance, I am replying to this message that I just saw posted in the rec.radio.amateur.policy newsgroup. When I double-click on the message, a separate window opens up (I use Outlook Express also). When you double-click on a message, look at all the addressees that appear. Here is what mine is showing right now:

alt.radio.scanner.flame_fest
rec.radio.amateur.misc
rec.radio.amateur.policy
rec.radio.cb
rec.radio.scanner
rec.radio.shortwave

I have deleted all but rec.radio.amateur.policy, because I don't read the others and try to catch crossposting whenever I can. Sometimes I miss, but, what the hell...I am only human. Double click, delete the cross-posting, or leave it in. Hell, I don't care what ya do...really don't. Just figured you'd like to have the info! :)

Maybe this might help you understand Available Power Levels At Amateur
Frequencies including their microwve freq.
Have you ever heared of moonbounce on microwave freq..
Rick

�97.313 Transmitter power standards.
(a) An amateur station must use the minimum transmitter power necessary to carry out the desired
communications.
(b) No station may transmit with a transmitter power exceeding 1.5 kW PEP.
(c) No station may transmit with a transmitter power exceeding 200 W PEP on:
(1) The 3.675-3.725 MHz, 7.10-7.15 MHz, 10.10-10.15 MHz and 21.1-21.2 MHz segments;
(2) The 28.1-28.5 MHz segment when the control operator is a Novice Class operator or a Technician
Class operator who has received credit for proficiency in telegraphy in accordance with the
international requirements; or
(3) The 7.050-7.075 MHz segment when the station is within ITU Regions 1 or 3.
(d) No station may transmit with a transmitter power exceeding 25 W PEP on the VHF 1.25 m band when
the control operator is a Novice operator.
(e) No station may transmit with a transmitter power exceeding 5 W PEP on the UHF 23 cm band when the
control operator is a Novice operator.
(f) No station may transmit with a transmitter power exceeding 50 W PEP on the UHF 70 cm band from an
area specified in footnote US7 to § 2.106 of Part 2, unless expressly authorized by the FCC after
mutual agreement, on a case-by-case basis, between the District Director of the applicable field facility
and the military area frequency coordinator at the applicable military base. An Earth station or
telecommand station, however, may transmit on the 435-438 MHz segment with a maximum of 611 W
effective radiated power (1 kW equivalent isotropically radiated power) without the authorization
otherwise required. The transmitting antenna elevation angle between the lower half-power (-3 dB
relative to the peak or antenna bore sight) point and the horizon must always be greater than 10°.

(g) No station may transmit with a transmitter power exceeding 50 W PEP on the 33 cm band from within
241 km of the boundaries of the White Sands Missile Range. Its boundaries are those portions of Texas
and New Mexico bounded on the south by latitude 31° 41' North, on the east by longitude 104° 11'
West, on the north by latitude 34° 30' North, and on the west by longitude 107° 30' West.
(h) No station may transmit with a transmitter power exceeding 50 W PEP on the 219-220 MHz segment
of the 1.25 m band.
§97.315 Certification of external RF power amplifiers.
(a) No more than 1 unit of 1 model of an external RF power amplifier capable of operation below 144 MHz
may be constructed or modified during any calendar year by an amateur operator for use at a station
without a grant of certification. No amplifier capable of operation below 144 MHz may be constructed
or modified by a non-amateur operator without a grant of certification from the FCC.
(b) Any external RF power amplifier or external RF power amplifier kit (see §2.815 of the FCC Rules),
manufactured, imported or modified for use in a station or attached at any station must be certificated
for use in the amateur service in accordance with Subpart J of Part 2 of the FCC Rules. This
requirement does not apply if one or more of the following conditions are met:
(1) The amplifier is not capable of operation on frequencies below 144 MHz. For the purpose of this
part, an amplifier will be deemed to be incapable of operation below 144 MHz if it is not capable of
being easily modified to increase its amplification characteristics below 120 MHz and either:
(i) The mean output power of the amplifier decreases, as frequency decreases from 144 MHz, to a
point where 0 dB or less gain is exhibited at 120 MHz; or
(ii) The amplifier is not capable of amplifying signals below 120 MHz even for brief periods without
sustaining permanent damage to its amplification circuitry.
(2) The amplifier was manufactured before April 28, 1978, and has been issued a marketing waiver by
the FCC, or the amplifier was purchased before April 28, 1978, by an amateur operator for use at
that amateur operator's station.
(3) The amplifier was:
(i) Constructed by the licensee, not from an external RF power amplifier kit, for use at the licensee's
station; or

(ii) Modified by the licensee for use at the licensee's station.
(4) The amplifier is sold by an amateur operator to another amateur operator or to a dealer.
(5) The amplifier is purchased in used condition by an equipment dealer from an amateur operator and
the amplifier is further sold to another amateur operator for use at that operator's station.
(c) Any external RF power amplifier appearing in the Commission's database as certificated for use in the
amateur service may be marketed for use in the amateur service.
97.317 Standards for certification of external RF power amplifiers.

You are showing your age, Jeff, or lack thereof. Back in the '50s when I got my first license, sidetones were rare as most receivers had to be muted before keying the transmitter. Back then, most hams used straight keys WITHOUT sidetones. Sidetones are absolutely unnecessary if one learns CW correctly. I can still send near perfect CW with a straight key without sidetones.

> I guess I won't make the mistake of associating the word "clever" with
> Cecil in the future.

I simply do not believe you can demonstrate your mirror/stick procedure to achieve consistant dots and dashes over a five mile path. IMO, your scenario cannot be achieved with an average ham on each end. I would classify it in the same category as the wet dream of saving the world with a 2 watt CW transceiver.

Mark, with the exception of chain saws, all of these devices are designed so the average, unskilled, consumer can operate them safely without harm to himself or others. This is not so with high powered radio equipment, especially in the microwave frequencies.

More importantly, ham radio, under normal operating conditions, involves the risk of harming others (unlike the devices mentioned above, including the chainsaw). Radio signals don't just stop at your front door - you're neighbors are involved also. So are the children who happen across your antenna in the back yard. That is why ham operators are tested for knowledge about RF safety.

I disagree. If you had met some of the hams and radio jox I've known
over the years, you would know that VERY-high-powered radio equipment
can be operated by utter idiots.

Hey, I didn't say the system was perfect, Keith. Of course there are idiots who make their way into ham radio. We can only be thankful that they're not trying to trim coax with a chainsaw. But, overall, the system works, and that is probably about the best we can hope for it. And even a system that is only partly successful is better than no system at all (which is what some are advocating in the thread).

Acutally IMO the software should be distributed for free from Motorola.
They made their money selling the radio.

100 watts of rf power does not create a major safety concern,heck I can
burn myself with a 100 watt lightbulb and suffer a greater burn. safety
is also not going to convince the fcc or congress...ranks do the
convincing.

If you have problems with kids around feed lines and antennas then they
should be raised and secured. If you are so close to the nieghbors that
stray rf becomes a safety issue the station in question has a big
problem.

My Galaxy Saturn had the same thing. Real handy along with the built-in freq counter; could get in between the channels and have everyone looking for us on. When I was working security in college, I kept a 12-volt lawn-tractor battery, battery charger, and 102" whip with a quick-release mount in my guardshack (it had a metal roof...perfect for the whip) and would bring my Galaxy and little Palomar 300 toaster in a backpack. We had a very active CB community in those days, incluiding my mom who was disabled but had a big ol' base station and sat up all night running her mouth and my bro-in-law who also worked security. Beat the hell out of sitting out on post all night staring at the wall clock. Did this for a couple of years until my mom died, my bro-in-law left my sister, and then I just lost interest in CB. I'd had my ham ticket for a couple of years by then, but had stayed on 11m because of all the friends I had there.

I know what a VFO is and what it does. Had one in an old Golden Eagle (Listen to the scream! LOL). I was just clarifying (pardon the bad pun) what was an was not legal according to the FCC.

> Yes Dan, in the Land of Oz it is not good to piss off the wizard. Yet we live in a constitutional democracy where agitating for change against the powerful tyranny of the centralized bureacracy is the last best chance for change. If we don't agitate for change and our culture does not evolve as a result we are force to only consider revolution. Those in power at the FCC are not supposed to be monarchs but rather public servants! Government is not supposed to serve the ruling class bureaucrats thirsting for power. Some can not function without the belief that their freedom and welfare are derived from the government. They are wrong. Our inalienable rights precceded our government. They exist, not because government or Bill Clinton say so, but because they are god given rights that government is not supposed to mess with. They keep trying to do so thus some of us must fight them no matter how they fight back.

Herb (KV4FZ)

--
The FCC states that KV4FZ "lacks the requisite character to have his ham
license renewed".
So they are banishing him from the ham bands forever. Yet the FCC has
renewed the ham
licenses of murders, rapists, drug dealers and pedofiles. No problem at
all. Ham exams are
administered to individuals in prisons across the country. Even super
hacker Kevin Mitnick retained his ham license
without a whimper from the FCC. What is so special about KV4FZ that it
required Bill Clinton to
order FCC Commissioner

681. Q: sw. power supply EMI

Newsgroup: rec.radio.amateur.misc
Date: 2000-09-14 00:00:00 UTC
From: Reinhard Geisler <rgeisle@Physik3.GWDG.DE>
Message-ID: <39C0FA59.FB56EC14@Physik3.GWDG.DE>
Source record: 103431
Cross-posted to: rec.radio.amateur.misc,maus.technik.amateurfunk,uk.radio.amateur

Hi,
I got the following problem:
A switching power supply (3 phases 208V, 6kW, HV out) causes
spikes (rep. rate 50kHz, freq. around 10-30 MHz, some Volts)
on protector ground (which is nearly every piece of metal...)
of my whole lab. This also happens if the output HV is
regulated down. The PS is completely shielded by a sheet iron
housing. It has an own(!) cable (4 wires, shielded;
shield = p. ground) from the HV-transformer of our local
energy supplier. Around 20m unshielded cable (5 wires) are
between our switchboard and the PS. An autotransformer in
between changes from 400V to 208V.

I tried different ground connections. I tried coils in
the power lines and a commercial mains filter (only 6A,
but no problem since the PS had no load...).
Nothing changed.

Any hints how to cope with this problem?

tnx in advance,
Reinhard Geisler

I can't believe that I'm letting my self be sucked into this troll. I don't particularly care about the sport of code bashing - but - WRT the mirror flashing morse code analogy, I strikes me how unresoursefull you are and how easily you would give up in the face of adversity.

The assertion about not knowing how to aim the reflected light or how long to hold a dot or dash is correct. This is pretty much true with using morse code over a radio too. There would be no way to know how long to hold down a straight key to make a dot or a dash - if - not for some form of feedback to the user. If you were one of the few hams who have ever acutally used their radio to communicate using morse code, you would know of a necessary feature called the "side tone". Every time you depress the straight key, you get to hear yourself, and in this way guage how long you shold continue to hold down the key to form a dot or dash. Simurlary, if you wanted to shoot a target with a gun, you would have little chance of hitting your target if you did not employ an aiming aid like the gun's sights. So to accomplish the mirror morse code task you would need some form of feedback and aiming sights. I guess you would give up at this point. The advanced technology required to accomplish this is just not available to you in this rustic scenerio. Well - maybe not to Cecil.

I have never been a boy scout or an army solder, but the answer to this perplexing delima seems obvious enough. Grab a long stick and stick it into the ground. There - I just saved the lives of everyone stranded in our desperate band of people. You position youself in the sun light, and align your position such that the stick you just placed in the ground is also in the line of sight between you and the far away receiver of your mirror flashes. You then move the mirror untill you see the bright sun light show up on the stick at a position that aligns your eye with the far away receiver. This ensures the aim of your flash. By watching how long the suns reflection stays on the "sweet" spot on the stick will allow you to gauge how long to hold your dots and dashes. This ensures the feedback part.

I guess I won't make the mistake of associating the word "clever" with Cecil in the future.

What other conclusion is there?...
You're asking for someone to pirate software...
I know.. Email Motorola, ask THEM (let 'em know exactly what you're planning on doing, exactly what software you're buying, etc) and then post the answer here.. Ok?...
I bet you're not interested, are you?... I wonder why...

But it is OK for a shop that repairs motorola equipment to buy
ONE (1) copy of programing software and install it on three
technicians laptops and the shop machine. I am talking a
"single user" copy. NOT a site license..

Just my opinion..

Bob

Well, if you were to be in a planning stage, it would be far simpler to
use the internet with an encryption tool. Although I have copied
(perfect copy, about three quarters of a typewritten page) 40 WPM in a
Navy test, I was capable of bursts at 90 WPM on a 100 WPM teletype -
far beyone my CW capability. Nowadays, of course, electronic keyboards
are even faster. This give good security (with a decent encryption

program - plus an extra encryption using a one time code), plus hard copy if need be at a number of widespread sites.

If, on the other hand, you were to be at the execution stage (ie; looking out for cops or something), then CW is far too slow ... use voice. You can use FRS, amateur, CB, or - better yet - roll your own transceivers for a couple of GHz where no one is likely to find you. Keep transmissions short (not several minutes of cypher groups!). Again, you could use spread-spectrum and no one would even no anyone is transmitting. Again, for an execution stage, voice communications would be necessary. One wouldn't have the time to sit and copy code. Otherwise, why not just use the internet?

Oh well ...

I already did, by PHONE. The response was that so long as only one copy
is in use at a time, loaded onto one computer, there was no conflict
with the license. It doesn't matter how many people pay for it.

Maybe you think that every single technician at a radio shop buys a
separate copy of the software . . ?

If you had made that call before playing Fearless Fosdick, you could
have saved yourself a lot of embarrassment.

701. Re: March KV4FZ to the Gallows

Newsgroup: rec.radio.amateur.misc

Source record: 103413

A thunder of emails has clapped to this thread. Themes being similar, here is the response:

The FCC's case against Shoenbohm was lodged simply because he fell into their crosshairs as a convicted felon. It was not for the nature of his felony. Out of all felons, he was singled out for selective treatment. The FCC ruled, in its case, that the vaunted Miller tape of Herb dialing numbers on ham radio was NOT evidence of any crime.

That being the case, the amateurs who have been convicted of pedophilia, are, theoretically, at equal or greater risk of losing their licenses. And one enticed children with his ham radio. Not to worry, we know the FCC was driven by considerations other than Schoenbohm's candor or lack thereof.

If candor be the bonafide issue, the Commission chose an extraordinary circumstance in which to nail him. His appellate rights were at stake, i.e. the Constitutional protection against self incrimination. (Customarily the accused do not to take the stand.) As long as Schoenbohm's appeal from his criminal conviction was pending, the FCC had no right to put him under oath and go there, let alone expecting him to admit even de minimus culpablity.

Then, heaped on is the ex parte charge. What are we supposed to think? Where there's smoke, there's fire. And the words "ex parte" are intended to send an image of someone trying to fix his case. After all, anyone who declares that Americans can write their government officials must be the worst type of American.

In fact, KV4FZ has been calling for social action on a number of fronts from the time I first heard him in the eighties. This conduct routine to social activists is tagged with a nefarious label and Schoenbohm is fingered.

Remember, friends, the more we snow him with, the less likely he can dig himself out. The final deluge is the Commission's fait accompli, shifting the burden of proof. His culpability assumed, Schoenbohm must fight the FCC to perseve his ham license. With his breath nearly extinguished, we can now write his post mortem.

My position is not based upon Herb as a person, his operating practices or his opinions. It is rather based upon the traditions we share. Everyone charged has the right to know the precise charges so as to develop a defense. Our Constitutional protections are supposed to be inviolate. That means no one should be charged with A when the case is really about B.

Those of you who think, convoluting the system is all right are throwing out the baby with the bath water. Anyone who stumbles on folly, unlike Schoenbohm, should expect the protections of the system to remain in force throughout.

If you will READ (by which I mean you have to comprehend the meaning) the original post, Keith says "Anyone in Utah with a Saber, who wants to split the cost on RSS software?" What that means is that he's looking for someone in HIS area to share costs with, not just browsing the Internet.

Def: partnership: the state of being a partner.

Def: partner: one that is associated in action with another : COLLEAGUE

(Definitions from the TIME magazine - Webster's New Ideal Dictionary)

BTW, I consulted with my brother, who works for Motorola. He says that Keith's plan is considered acceptable usage under Motorola licensing. No piracy or copyright infringement.

Mark

BTW: The next sound you hear will be the block sender filter on my PC. Bye-bye BD. "Ploink!"

Subject: Re: What if to resolve KV4FZ - FCC dilemma.

Sorry, I missed the question bend of your first email. What do I think?

I believe factually, though no felon, Herb is a blunderer who is utterly unaware. He is no criminal kingpin, just a mischievous adult child. Believe me when I say I've visited this opinion on Herb often, but he's his own incorrigible person.

There is no collusion going on between us. I write publicly just what I feel, so my integrity is absolutely unabridged. I also encourage him privately to keep up the legal fight, because I feel that is paramount. Rights-wise I think he's getting a screwing.

Remodelling-wise, the FCC can be the hole in the wall on M Street or in a fancy office, still Herb will be Herb. If it isn't or wasn't the FCC, it would be another windmill he'd be tilting at. That is simply the indigenous nature of his personality. And it is socially impairing. Denial is so strong that he casts himself in the martyr role, failing and refusing to simply say he's sorry.

The legal position of his cases are defensible but his conduct speaks for itself and is not susceptible to rescue. ha, ha.

Your shack may have been in the 90's, but mine is always a cool 70 degrees. You see the hobby/service as half empty. I see it as half full. You listen to jibberish. I tune jibberish out and talk to many I've know for twenty years. Your perspective is that of a new comer while I've been a part of ham radio for 50 years.

During that time, I've come to see ham radio at its best: the tie that binds when all other communications fails, the last resort for the ship wrecked, the movers of life saving operations in the free world for kids of the third world, the messenger in catastrophes that a family made it through, the foot soldiers with handhelds in the trenches during times of disasters, the witnesses who get first word out of conflict, eye witnesses to any number of events of public importance.

Please, my friend, take your head out of the sand and smell the roses.

Do people run 1500 watts at higher frequencies? Which frequencies are you
talking about Dwight?

He's right, Jeff, the closest thing to a sidetone on the old rigs was a
loose lamination in the power transformer.

This coming Sunday !!!

**** IMPORTANT NOTE ****

Vendors.... Due to circumstances beyond our control,
Vending will NOT be allowed in the garage. :-(

As this considerably reduces our available sellers
spaces, we are likely to be sold out if you are
not prepaid already.

We are attempting to get the City of Cambridge to
allow us full use of the garage. For any
late news check our web site

http://web.mit.edu/w1mx/www/swapfest.html

****
2000 DATES -> -> September 17 and October 15, 2000
****

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday September 17th 2000
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.

Non prepaid vendors will only be admitted if
space is available. :-(

Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

Talk-in: 145.23- (PL 88.5) W1BOS/R and
W1XM/R-449.725/444.725 (PL 114.8/2A). +

I've personally seen a few operating the limit on 2m and 440 (and hear
of others), so I'm sure more than a few have tried operating at the
limits on frequencies higher than that. In other words, if the rules
allow it, I'm sure someone has tried it. And that is why safe operation
on those higher frequencies is covered in the license exams.

But, what is the purpose of your question? There are a lot of ham
operators out there, and a lot of frequencies available to ham operators
in the VHF, UHF, and higher, bands. Therefore, I can't possibly know
which frequencies each ham operator, using higher power levels, is
using. Since that is rather obvious, your question seem more rhetorical
than an honest attempt to seek an answer.

I just want to see some ham actually pumping a couple hundred watts into
a moon microwave . Where do you buy one of those? Can't the moon be
bounced with far less power.

Oh the fun I could have with that.

Well, I'm sorry you took it that way, Barry. I answered your question the only way I could - I don't know. But, again, that would seem rather obvious (without study, how can anyone know what a large number of people are doing), which is why I was left wondering about the intent of the question.

Perhaps you misunderstood the content of my previous comments. I never said that I knew of anyone using high powered equipment on any frequency. My comments were limited strictly to the rules, which would allow such operation. And the need for a license exam because of that possibility (and other reasons).

: --
: Jason Hsu, KB9PNZ

Most of the people I knew who were on VHF/UHF weak-signal modes in the late 60's/early 70's used transverters. The popular transverters used Nuvistor tubes. Parametric amplifiers were used as low-noise preamps.

Somewhere I still have a Nuvistor transverter for 220 MHz.

My, how the world has changed! We now have GaAsFET preamps with incredible noise figures, MMIC's to serve the purpose of those Nuvistors, and no-tune circuits with printed hairpin bandpass filters. Makes it pretty easy!

Just got my license last week, and the actual paper confirmation and the radio I ordered even arrived on the same day (good omen?) I'm wondering if there's any 2-meter activity around here. I've tried several of the repeater freqs (off a list of repeaters I found for the state), and a few calls on 146.52 as well, but can't talk to anyone. I know the receiver works, because I can pick up a weather channel outside 144-148 (the radio is a Icom IC T2H, by the way.)

Part of the problem is where I'm transmitting from - inside the barracks, about 5 miles from Junction City and about 15 from Manhattan, the two closest towns. I thought I'd be able to hit the one in Junction City from out in my car, away from all the interference in the building, but no luck. I'll be getting a mobile antenna, but not for another week or so.

If anyone could give me some pointers on how to get going here, I'd greatly appreciate it. Thanks!!!

True, but, as we all should be aware of, all stations need to be able
to monitor in some way their signals. Real hams use a Growler!

Also, one can send well on a bug without a sidetone, but it takes a
bit of practice and mental cadencing.

And, any good op can get excellent sidetone, just by the clatter of the
keying or antenna changeover relays if running full breakin.

Heck, even the fundamental overload on a detector at keydown will provide
sufficient sidetone.

It's all in what you get used to, or can make use of......

What is it with you and Brother Stair??

I tuned into 6110 kHz today, there must have been some fading as the audio was very distorted and scratchy, it sounded like Brother Stair was shouting and he sounded quite angry.. In fact, it sounded the same last week and the month before that...

I wonder why he uses 6110kHz during the Afternoon here in Europe? Are those the cheapest, roughest frequencies going? Any broadcaster worthwile usually goes for 31m or smaller...

Just wondering...

Hello gentleman and ladies.
I just would like to say hi and goodbye to all my fellow hams out here. I just decided I have had it with the hobby. My observations have been as followed. Most hams are fat overweight men with baseball hats and their call letters who everyone makes fun of and they dont even know it. My friend that is a waitress cringes when she sees the hams come in to the local coffee shop They sit around stroking each other shower off their portable radios and furthur more dont tip. They all drive old shitty cars with antennas all over the damn place and look ridiculous.
I really wasted my time studying for this stupid hobby. Most hams live for the ham fests and stay inside their shacks talking boring jibberish yelling cq etc to all these other weirdos. Who wants to sit in a ham shack when its 90 degrees. I want to be at my country club or on the golf course or something. Have you ever really listented to a conversation between 2 of these old men. All they talk about is their doctors appointments etch
Well I am out of the hobby starting right now. I will stick to more constructive things

It can short out if a voltage surge in the reverse direction is applied
to the diode. You may have a shorted final output transistor. It's also
connected directly to the + battery lead.

Hi Zack
In the real old days I miss some of ye ways we did things. Like screw terminals on everything, wiring run in very straight lines with proper right-angle bends. You never got burned by a soldering iron, or had the xyl have you explain that funny mark on the new rug.
They call it "progress"
Jack Parr

But we're talking about as much as 1500 watts, not 100 watts. That is
the limit legally allowed on some ham radio frequencies. And when
you're talking about the higher frequencies, safety around 1500 watts is
a real major concern.

Good post, Rick. And, Mark, thats why ham radio operators are tested on the rules, radio safety, and proper equipment operation. The rules we have to live by are enough to make a person's head swim. And the equipment we are capable of using does pose a great risk if not use properly. With that in mind, it is entirely reasonable to require a license exam and license.

In support of KV4FZ, I post once again this epic saga:

KV4FZ's Couragous Fight

KV4FZ has been an active amateur radio operator since 1954 when he was first licensed in the Midwest as W0VXO. While working his way through college (1960-64), he spent summers teaching at several camps for the physically handicapped. He was highly successful in teaching seriously disabled campers about the potential of amateur radio. Many of these campers went on to fully qualify for their amateur radio licenses.

His father, W.B. Schoenbohm, was the founder of Courage Center in Minneapolis. Herb was a major force in pushing for the initiation of the Handi-Ham program, which is now widely recognized as the premier service organization for disabled radio amateurs. After college, Herb worked as a international sales representative for Gates Radio, Harris Corp, and Collins Radio. He sold and distributed broadcast equipment to the international market, primarily Latin America. In 1968, he moved to the U.S. Virgin Islands with the intent of better serving his customers. His wife Monika was, at that time. a service representative for Pan AmericanAirways. KV4FZ was very active in DX work and, as a frequent traveler, put many new countries on 160 meters. He was instrumental in getting Stew Perry, W1BB, the necessary countries to be the first ham ever to get DXCC on 160 meters. He also gave G3IOR the last country he need (VP2EFZ, Anguilla) for the first ever DXCC via satellite (Oscar 7).

During the 1970's, KV4FZ was able to set CQ World Wide records 160-10 in almost ever category except 40 meters. He was also very active in supporting the IARU Intruder Watch after encountering frequent yachts in the area that had acquired licenses of convenience for a fee. At that time, FCC Commissioner Margita White appointed KV4FZ as the Virgin Islands SECC. The SECC has responsibility to plan and manage the operation of radio communications resources during island emergencies. Herb fulfilled that role magnificently and was named a Virgin Island "Hero" after Hurricane Hugo destroyed most of St. Croix in 1989. Herb received this award for keeping vital communications circuits open during the crisis.) Herb also took a detailed interest in how most of these "pirates" has a close association with the so-called "service nets" on the top end of 20 meters. He joined the net and attended several of the hamfest functions. Only then did he learn how deliberate and sordid was the manner in which net members misused the amateur spectrum as a means to provide an international telephone toll by-pass service. One of the most flagrant of all these operations was the "INTERCON" network operating, for the most part, on 14.313 MHz. Herb began detailed monitoring of their operation and

intercepted many communications that were appalling to say the least. In 1979, KV4FZ listening to what appeared to be a "business connection" between WB6MID/8R1 in Jonestown, Guyana and WB6MID in Ukia, California.
Herb broke in and informed the net personnel that this type of operation on an amateur frequency was illegal. Furthermore, Herb stated that their communication constituted international business communications related to funds transfers and the procurement of equipment and supplies. The net hierarchy reacted by excoriating him for his "embarrassing comments" and ignoring the violations. The net bluntly told him that the Jonestown Operation was a missionary group and that they had special permission from the Carter administration to use ham radio to further their "worthy cause". Herb persisted with his concern and was quickly declared 'PERSONNA NON GRATA" by Robert Sternberg, AA4EE, a tax attorney who claimed to be the nets legal advisor. Herb expressed his concerns to other net operators participating in the companion "Maritime Mobile Net" such as Dick Eastman, N5FX and Mike Galego, KA4MUJ. Several Maritime Net members agreed that some of the more criminal practices, such as one ringers and "maintenance charges" for providing long distance toll free connections practically anywhere in the world, must be curtailed.

Some of the net cabal hierarchy rebuffed all attempts to institute reform and a nasty power struggle ensued. Eastman and Galego were "ex-communicated" by Ruth Hoffman N4LMC, Eddie Ricca K4PT and Art Candell N4PCK. The latter began a propaganda campaign, replete with false stories and personal attacks, that promised to destroy any net opposition that sought reform. The net members objected to the lively participation of KV4FZ, KA4MUJ, and N5FX (a former net director) who frequently brought to the attention of net participants certain stations whose conduct violated the FCC and International Rules.

During the 1980's, net members began a campaign of coordinated complaints to the FCC claiming that the aforementioned three were causing willful and malicious interference to the net. N5FX and KV4FZ both received prefabricated FCC citations at the behest of the net command. Both were able to get the FCC to nullify their actions based on the fact that their constructive comments did not constitute "malicious interference" and that certain members of the net themselves were engaged in a premeditated campaign of harassment and interference.

Several members of the net were subsequently caught interfering with the communications of KV4FZ and KA4MUJ. They include K2BFI and AA5LY. AA5LY later gave the FCC, and supporters of KV4FZ and KA4MUJ, a complete and accurate accounting of the plot by disgruntled net members to "settle the score". That plan included a vigorous campaign of letter writing to politicians in Washington in an attempt to pressure them into punishing the net detractors.

N4PCK had his own reason to get even. He had known Herb while he was operating in Haiti as HH2A and was very active on the INTERCON net. Herb had learned, through his contacts in Haiti, that Candell had a serious problem. He would solicit young pre-teen boys and pay them a quarter to

perform sex acts on him. A prominent Haitian administrator was told, by his son, that the young boy had been abused and sodomized by Candell. There was no arrest or trial. But the arrival of the outraged local citizenry at Candell's hillside villa dictated that Candell receive an armed escort to the airport. Candell then appeared in the Orlando, Fl area, illegally using the call HH2A/W4 and actively engaging in net activities. The net watchdogs, now known as the B.A.R.F. (The Better Amateur Radio Federation), pointed out that Candell was not eligible to use a Haitian call sign in the United States unless he was a Haitian citizen and had been granted a proper permit from the FCC.

Again the net members supported Candell and sought to silence Herb. However, the FCC ruled that Candell could no longer operate from Florida unless he obtained a valid U.S. amateur radio license. Candell later paid off a VEC in Silver Springs, Fl to fraudulently give him a passing grade on a General Class license examination. The VEC was later sanctioned but Candell was neither removed from the air nor required to be re-examined. In 1989 Candell was finally arrested and convicted of multiple incidents of child molestation. He was given a suspended sentence that was partially based upon INTERCON's assertion that he had been rehabilitated by amateur radio service in their net. (Candell was arrested and convicted again in 1994 for carnal assault on several boys between 8 and 10 years of age whom he had invited into home under the pretense of showing them his ham station. He has been institutionalized for several years but his ham license was, nonetheless, renewed in 1996 for another ten years.)
In 1990, Candell continued with his plot to destroy and discredit KV4FZ in retaliation for Herb's alleged "interference" with the net's "business". Candell actively leagued with other enemies of KV4FZ such as Pat Miller, KP2J in St. Thomas, and Richard Whiten, WB2OTK. Miller supplied Whiten the so-called "proof" of a crime by playing a recorded tape on both 20 and 75 meters. Miller introduced Candell to the operator of a long distance resale service that KV4FZ briefly subscribed to in 1987. Some of the users of the CALLS (Caribbean Automated Long Line Service) system (a six digit access code system on which half the possible combinations of digits gained the caller access to a WATTS line) had been illegally abusing the CALLS scheme. Malcolm Ford had claimed losses to the tune of $200,000 and needed a scapegoat. Thereupon, it was decided that a criminal case should be manufactured against Herb, KV4FZ.

Ford needed this falsification to support his ludicrous claim that the impending bankruptcy of CALLS was not due to his inept management. Instead, it proffered that somehow Herb had caused his business to fail. This was vital to Ford because he was still salaried as the GM of CALLS even though they were in receivership. Ford's efforts failed and he was physically removed from the operation after the Federal Bankruptcy judge found him raiding the treasury and assets of CALLS.

However, all during this time, Ford was fabricating evidence in an attempt to establish a connection between CALLS financial failure and KV4FZ. Yet the Department of Justice continually refused to prosecute Herb. This resulted in even more acrimonious letters to officials and politicians in a

further attempt to implicate Herb as the culprit.

Malcolm Ford, the previous owner of CALLS, was then under investigation for bankruptcy fraud. In an attempt to escape indictment, Ford hired John Ackley, KP2A, to fabricate various reports that would designate Vitelco(a local phone service), STSJ Long Lines, ITT and Herb as coconspirators who were attempting run him out of business. While this was going on, Ackley was attempting to buy the nearly defunct company for ten cents on the dollar. (Ackley failed but STSJ was able to get the company back on its feet.)
Miller, Hoffman, Candell and others intensified their letter writing campaign to hundreds of politicians in Washington urging them to investigate. They even began writing letters to newspapers, claiming that politicians were shielding KV4FZ from prosecution. In these hate letters to public officials, Herb was equated with organized crime, drug trafficking, and high level political corruption. In 1991, KV4FZ was writing a hard-hitting column for the St. Croix Avis newspaper. Herb frequently attacked political corruption so it stood to reason that he might have some enemies in government. Herb had articles published about the check kiting and House Banking fraud perpetrated by the Virgin Island Delegate to Congress, Ron Delugo. Outraged and distraught, Delugo (who had designs upon becoming the next governor of the Virgin Islands) assigned a full time staff attorney (Sylvester Julian) to explore methods of pressuring the FCC, the Secret Service, and the Department of Justice into investigating Herb and "putting a 'severe hurting' on him".

However an obstacle remained in the path of their plan to annihilate KV4FZ. Some at the FCC supported Herbs activities on behalf of the amateur radio service. Additionally he was elected as Vice Chairman of the Virgin Islands Republican Committee, which made him a frequent delegate to the GOP Conventions. Furthermore, Herb was personally acquainted with President Bush. Herb's father had served on the President's Commission for the Handicapped.

Initially, each and every involved agency claimed there was not enough evidence to support a charge against Herb. Subsequent to this, John Ackley, KP2A, manufactured a list of 660 telephone calls that were prearranged to add up to $1,047 in value. This was exactly forty-seven dollars over the amount needed to achieve the threshold of prosecution. Delugo wrote threatening letters to various government agencies threatening that he would see to it that their funding was severely curtailed if he did not receive figuratively receive Herb's head on a silver platter. Ruth Hoffman constantly badgered the acting U.S. Attorney for the Virgin Islands, Terri Halpern. This continued to the point that Hoffman was finally ordered to stop harassing Halpern. However, as a Congressman to the VI, Delugo was in a position convince colleagues not to block Halpern's confirmation. Delugo reportedly told Halpirn that, unless she prosecuted Herb Schoenbohm, she would never become U.S. Attorney. (Halprin was fired in 1992 by the DOJ for ethical lapses after the Office of Professional Responsibility investigated the severe criticism, from the 3rd Circuit Court of Appeals, that Halpern received for the "knowing use of false evidence" to secure a

conviction. Nevertheless, the trial prosecutor was cleared by OPR because they were unable to prove that the prosecutor actually knew the evidence used was false.)

Herb's trial took place in April 1991 (four months past the five-year statute of limitations). Both Ackley and Miller testified, under oath, as to the veracity and accuracy of the incriminating evidence they had assisted in concocting. (Miller offered his so-called "caught in the act" tape of Herb dialing "illegal access codes". Ackley presented his list of random numbers that he verified, as a government expert witness, were all telephone numbers dialed by defendant Schoenbohm.

The puzzled and confused jury convicted Herb on all three counts of Title 18, SS 1029(a): 1,2 and 3, which is, in reality, an illegal credit card statute. This statute has been used infrequently to curb the illegal use of cloned cellular telephones. After trial, Schoenbohm with the help of Bob Sheron, W4ASX, closely scrutinized the evidence and began tracking down the parties that Ackley had claimed, under oath, that Herb had illegally called. A most amazing discovery unfolded: most of the persons contacted did not know Herb Schoenbohm or had never had a telephone conversation with him. Amazingly, they had already given statements confirming this fact to the Secret Service investigators. Most had even identified persons, other than Schoenbohm, whom had called them from the Virgin Islands during the timeframe in question (1987). Interestingly, the court refused to allow Schoenbohm to verify the numbers before trial.

The court incredibly claimed that it needed to protect the potential witnesses
from pre-trial disclosure! After trial, armed with affidavits from the persons
alleged to have received Herb's "illegal" calls, Herb moved for a Judgment of
Acquittal not withstanding the jury verdict. The court granted the motion on
all counts but one (Possession or Use of a Counterfeit Access Device). The court maintained that the Miller tape proved that something was amiss and the jury could correctly deduce from this that the law had been broken. This court decision differs from the previous decision in that the device is similar to, but not exactly the same as, a valid device and does not require the threshold of over $1000 in use. (The irony in this entire matter is that Herb freely admitted to using the service briefly in 1987. He was a bona fide customer and the total actual use amounted to $106. CALLS finally was required by the court to produce Herb's check for $104 that they had received in1987. They admitted that they did not cash the check but, instead, held it as an aid in the plot to entrap KV4FZ.)
When the court vacated the judgment requiring two months prison time, Herb's detractors were enraged and, once again, began the political letter writing campaign. Now the claim was that Herb had used amateur radio in the commission of a crime and should be taken off the air. They sent the highly doctored Miller Tapes to the FCC in an attempt to prove their incredible theory. Their letters were full of outrage over the fact that

Herb had once more cheated Madam Guillotine and he still on the air making waves. Some were furious due to the fact that they had given financial support to certain political candidates and nothing permanent had been done to rid the airwaves of this "pest", KV4FZ. (Ruth Hoffman even conveyed gifts to officials at the FCC in attempt to bribe public servants. One such official, William Cross, was investigated for leaking internal information to Ruth Hoffman in the KV4FZ matter. Hoffman then disseminated this information for use in the hate campaign against Herb.)

KV4FZ then was subsequently forced to embark upon a long and costly struggle for justice. He has had to fight the refusal to renew his amateur license by demanding a hearing before the FCC. (The refusal to renew is rarely used as a procedure and has been given the title: "The FCC Death Penalty" because the entire burden of proof is placed upon the licensee.) At the first FCC hearing, Administrative Law Judge Luton ruled against KV4FZ. However, upon higher review, the FCC General Counsel refused to accept Judge Luton's findings and remanded the matter for reconsideration. The principle issue is whether or not KV4FZ had used amateur radio in the furtherance of the commission of a crime. This time the ALJ ruled that there was nothing in the evidence (The Miller Tape) that was illegal in any way. The concluded that Schoenbohm actually was dialing ordinary and valid Virgin Islands telephone numbers. He was not entering illicit access codes to make long distance calls.

The ALJ did, however, agree with the Wireless Telecommunications Bureau (WTB) assertion that, by giving out the telephone number, in 1994, of Herb's future boss, Congressman Frazer (whom, incidentally ran Delugo out of office), Herb was violating a solicitation restriction of ex-parte rules. This was despite the fact that WTB had conceded that no actual ex-parte violation had taken place. The ALJ ruled that, by attempting to explain his conviction as a De Minimus violation rather than a crime of major impact, he was trying to mislead the trial of fact. (In administrative law, the assertion of innocence is a crime even if the accused is actually innocent! It is akin to Hobson's Choice or the Salem witch trials whereupon, if the tied woman is thrown into the pond, and she does not drown, then she must surely be a witch and, thus, must be burned to death.

Herb had been fighting the remaining count through the Federal Courts and has even succeeded in convincing the courts to severely criticize the DOJ for their handling of the case. Nevertheless, they refused to reverse the remaining conviction because of the nearly impossible to define "standard of harmless error". The appellate court ruled that the motion for Judgment of Acquittal had been filed too late even though the trial judge had granted an extension based on the emergence of irrefutable proof that the prosecution had used false evidence. As a result they were barred from considering the sufficiency of evidence matter at this late date under the rigorous standards of Habeas Corpus review. However, a positive revelation in the latest FCC decision is that it clearly vindicates Herb on the original charge of using ham radio in the commission of a crime. It also conclusively proves that his detractors engaged in perjury before a Federal

Grand Jury and Petit Jury trial.

Many on the local scene recognized the truth. The Trial Judge, The Honorable Ann Thompson, wrote a letter of support and praise on Herb's behalf. The Governor of the Virgin Islands did not simply restore Herb's government career. He elevated Herb to a position of higher authority with more responsibility to the island and a significantly higher salary. He was also employed, as a part-time field representative, on the congressional staff of newly elected Congressman Frazer.

The FCC WTB attorneys characterized these as "political jobs", unworthy of consideration as a mitigating factor in Herb's "rehabilitation"!) Although Herb had a Congressional Floor Pass, granting him direct access to the ears of the politicians, there is no evidence that he ever abused his position to lobby House members against the FCC. This is in spite of the fact that the bureaucrats inside the FCC are very much afraid that Herb might just whisper in the ear of someone who controls their finances. Because of this, Herb is not allowed to take his case to the very people who would be horrified to learn the truth about how he has been treated. These are the people who could finally put a stop to this travesty of justice. Yet, Herb's detractors are on the phone daily, pushing those in power to get him off the air, one way or another. When will the voice of reason and justice be heard?

Some of us do not like the odds and are willing to help end this fiasco. Herb's legal bills are soaring but he continues the fight. His attorney, Larry Colby (a licensed ham), has stated that when this issue gets into the proper arena, Herb will be totally vindicated. But this can only happen if Herb is allowed to fight on and get his case into the proper arena. Right now, it is still in a forum where all the rules are stacked against the licensee. When the matter gets out of the FCC, and into the D.C. Circuit Court, then the playing field is closer to being balanced. There, the Feds don't have the automatic upper hand that allows them to do what their political puppet-masters demand.

A small donation of $25, $50 or $100 will go a long way in continuing the fight for justice. There is an underlying principle that must be preserved. It is not keeping Herb on the air that drives his supporters. It is the realization that if they can deprive KV4FZ of justice then they can deprive any of us of justice. Today they are persecuting KV4FZ. Tomorrow it could be you. You could be railroaded just because somebody doesn't agree with your position on the nets, phone patching, or apple pie. Herb is working vigorously to get the funds together for his appeal. His attorney Larry Colby is attempting to get an extension of time to file exceptions. If you can help in anyway, please contact John Dillenger, K4GFM, who is the custodian of the Defense Fund.

Wow... I guess I want to be sensitive to the issue and really want to understand why would it be "FAIR" to reduce the requirements to a certain ethnic group? Are you suggesting that that you believe that a certain ethnic group is NOT capable of meeting this requirement. If so this is a terrible slam to your own race. Black, white, yellow or red who cares what color the skin is on the outside, last I checked we are all part of the human race.

The issue is not reducing a requirement. I think the bigger picture is exposure to the hobby. However, you would have a better understanding of this working in the inner city middle school. Have you exposed your students to the hobby and come to the conclusion that they simply can not grasp learning the code? That there is something different about the brain of a black student than that of a white student that impeds the learning process? I don't believe this for a second and I hope that you don't either.

I JUST DON'T GET IT! Seriously, I want to understand what the whole affirmative action is about. I would be insulted if I was given special consideration because of past imbalances.

Hi
Thanks

I am sending this message to all who replied on
the MFJ Tuner. Also sending in the order received.

This is embarassing
QLF QLF ON MY PART

The MFJ Tuner Brought 17 emails in 2 hours and I could not figure out
why!
I only got one email for another item ''the 18 Ft. tower.

Then I read what my Clerk posted
Wow $15.00 HELP??!!!
Should be $65.00 and still a bargain.
My Clerk operates on qrp brain power.

So in the order of received e mails I will accept the first re bid for
$65.00
I do not want to make it a contest so no need to bid over.
It is my fault so I will not profit from it.

I apologize for the Trouble and to be fair I am correcting the Post.

Will be back to all re-bidders regardless if they do not get to buy it.

we accept paypal
www.paypal.com
or
prepaid with Cashiers check or money order.

Once again I am sorry for the trouble.

```
What you propose is discrimination, plain and simple. The present
process is not biased for or against ant ethnic group, nor should it
be.There is a FAIR opportunity for all. Where there could be progress
made is in exposure. Perhaps, fewer blacks are exposed to amateur
radio. An outreach program to expose more people to amateur radio would
be great for all groups. It would be great to have a more diverse group
of hams. It is insulting and racist to believe that someone is less
capable, and needs an easier test because of their race.

I am deeply disappointed to warn you not to deal with Warren Brooks W4WWB. He advertised a radio on ebay that was complete, but needed some work. What arrived was a parts radio - Pieces were missing and it will not power up. After he ignored my emails I contacted him by phone and in his best good ole boy drawl he told me " you bought it, you own it". He would not allow me to return it for a refund. I know that ebay is a take your own risk venture - but deliberately lying about the condition of the radio to sell it is dishonest. What a disgrace to the ham community. Don't be suckered by this man like I was.

Hi Chris
We suggest downconverters for several reason ... lower frequency will have less sig lost to shack and receiver ... Look at Amateur Radio Astronomy page ... they have some Hydrogen line items for sale .. good luck pete smith
Radio web page ...

Nobody is stopping _anyone_ from communicating on CW. This issue is
whether it should be a licensing restriction. Face it, it's going
away. Maybe the technical tests should be toughened up, but the hurdle
of CW hasn't kept sleezeballs off the air. It was the lack of FCC
oversight that let the bands get polluted. Now that they are back on
the ball things may get better. If we ever get to the level of
technological and social collapse that renders CW as the only comm
mode available , the availability of CW is probably the _last_ thing
on you're agenda

Walt: Trebb@webtv.net (Bob Sherin) blurted out:

Bob: Grounded in reality, it (affirmative action) is an attempt to right past imbalances. Teaching in an inner city, middle school has taught me the great divide that still exists.

Walt: How many years back do you go to attempt to right 'past imbalances?'

Bob (present post): Naturally, I'm not the arbiter of that question. But I would have one consideration ever-present: How much of a divide still exists and how much opportunity has been afforded to break the cycle? To my mind, the objective function is not to punish the majority but rather to contribute to parity of minorities.

What past imbalances? More than 40 percent of the blacks in this country today were not in this country 20 years ago - they are recent emigrants. And the relatives of more than 85 percent of the blacks in this country today entered this country during the last century, long after slavery was abolished.

> minorities.

Even if that contribution of parity punishes the majority for an "imbalance" they did not creat? Nonsense!

I suspect the real goal is not to achieve parity, but to punish the majority for past wrongs, even if those wrongs didn't apply to said minority. In other words, white people are bad (look at what they did to the indians, or whomever, or whatever), so lets take whatever we can away from them (and give it to everybody, or anybody, else).

And, why are your contributions to "parity" so limited to one group? Whites have lost more than 50 percent of their purchasing power over the last thirty years (it now takes two workers in a family to earn as much as one worker did thirty years ago), yet you don't see that same loss of spending power in other groups. For example, Bill Gates, and his friends, have certainly not lost 50 percent of their spending power over the years.

that still exists.

Dwight: What past imbalances? More than 40 percent of the blacks in this country today were not in this country 20 years ago - they are recent emigrants. And the relatives of more than 85 percent of the blacks in this country today entered this country during the last century, long after slavery was abolished.
Dwight Stewart (W5NET)
http://www.qsl.net/w5net

To deny the African American cycle that ensued arguably from slavery is to show no human compassion. Go into any inner city and see the environment and conditions. Teach in the inner city and uderstand the alien upbringing of so many. Try to call some of the Fathers and Moms and you get gas stations, pay phones, girl and boyfriend's homes. Effectively, many have no guardians and are thrust into a cruel world, which they repeat. And hence the cycle goes on.

I favor changing the cycle in the most pragmatic ways. Their welfare and justice is mine.

Try a search for the QRP ARCI page, or go looking for the NorCal
QRP club, they have pages of QRP rig manufacturers. There are
quite a few out there, don't lose heart.

To appreciate the proposal is to understand the idea behind Affirmative Action. Grounded in reality, it is an attempt to right past imbalances. Teaching in an inner city, middle school has taught me the great divide that still exists.

Like everything else, once the starter fluid is applied, it takes off--at least that is the well intentioned idea.

Zack, you should be able to hit 146.88 in JC and 147.255 in Manhattan.
Maybe 145.41 Man as well- that one is run by the KSU club and I
believe is on campus. As for 147.255, I can usually hit that one from
Topeka with 10 watts- has an excellent receiver but it barely breaks
my squelch.
You may also check the repeater directory to see if any of the above
now utilize a PL-tone squelch. If it does and you don't have yours
set correctly, you're outta luck.

I have thought about this. I find it a very repugnent and totally
irrespocible suggestion. As if the hobby hasn't been 'dumbed down'
enough already. I wonder if you have counted the number of Eskimos
at club meetings? Now ~there's~ a minority!
'Doc
PS - I realize this is a troll, but what radio related past
discrimination are you talking about?

775. New Update For MMTTY Software

Just a quick note guys to say that there is a new release of Mako sans software for RTTY. It has supporting help files in English which have been compiled by the help group headed by Jan KX2A.

The software is fantastic, and if you have never tried it give it a whirl.

The file on my download page is for pentium use.

http://www.g3vfp.co.uk

Hope you enjoy it.

Best 73es Dave G3VFP

So what Eric???? My father did 27 years in the military before retiring. He spent 3 years in the Army & earned the Combat Infantry Badge during the Korean War then joined the Air Force, became a commissioned officer & saw service during the Vietnam conflict. He held the rank of Lt Colonel when he retired. You mentioned age 5, when I was that age my father was just returning from duty in the Asian Theater during the Vietnam conflict to a new assignment stateside.

I ask you Eric, what does our father's military duty have to do with anything? Why did you need to even bring this up?

> So, don't go strutting your so-called patriotism at me.
> if you are in uniform (which I doubbt), then you are definitely a
> disgrace
> and should be drummed out on your ass just on general principals!

Have you ever been in the military yourself?? I SERIOUSLY doubt it as you are NOT the type the military would accept.

I have had NO problem entering the military, have just completed basic training, & am now a Petty Officer (Non-Commissioned Officer). I had my choice of joining several different branches. Yet YOU have NEVER seem military service!!!!!!!!!!

SNIP
> you were dropped by @home for abusive behavior.

Wrong, that has never happened. Once again you are lying, Eric!

Doc, "Beating a dead horse"? Within the four corners of that post are obvious reasons to post. That is, while I've been quick to defend Herb's rights, I seldom have levelled on the factual level.

Hams being astute at every nuance, they've visited me with this oddity sufficiently that I thought I owed the explanation to the NG, lest I be considered one-sided or in anyone's pocket.

Morever, isn't it obvious to you that most issues continue, becoming part of the fabric of our society, such as minority and female rights? To silence a piqued interest is the epitome of self-centered behavior.

While you personally may be tired of the subject-matter, many of us cannot wait to see the legal wrongs remedied. Not to mention the importance of continuing to exercise the First Amendment on issues that matter.

Great Idea !!!! And once they get on the bands we can have 'special'
area's for them to operate in. We can assign 'frequency cops' (Koreans
or Vietnamese) to keep them in their area. And they can have special

contests too. At the end they could jam each other and all around them for a few hours. This will simulate the 'Watts and LA and Detroit" activities in another decade. And after 30 years or so they can all get on 20 in the "white mans land" and say "we didn't get a chance to be a real ham".

In a word.....BULLSHIT.

No, but it is interesting that they have a bunch of students who don't pay off their student loans. Maybe the curricula sucks and the faculties are a bunch of twits that shouldn't be teaching.

Two questions:
1) What the frick does this have to do with amateur radio?
2) If the STUDENTS are defaulting on THEIR Federal loans, what the heck does the Governor of the State have to do with it?

First, it has *absolutely* nothing with amateur radio... it sickens me
when everything including a stupid hobby has to become political.
Second, you can BET that the guy who blamed the governor would have not
blamed the governor if the he were a Democrat. How in the WORLD can you
blame a governor for students defaulting on their student loans!!!!????
It was an asinine charge.

On September 16, 2000 rong@computer.net said:
I'm Jewish, and I think that I am more of a minority than African
Americans. I got my Novice in 1980, my General in 1981, my Advanced in 1983,
and
my Extra in 1985. All of this was done at the not-so-local FCC office in New
York City. I had to take both the CW & theory exams in front of an FCC
inspector. NOBODY HELPED ME with downgraded tests--I, as a minority, did it all
on my own---THE HARD WAY. What you are proposing, assumes that African
Americans
have less brain power than other races, religious groups, etc. They don't.
Some
groups don't want to use their brains, some groups are not pushed to use their
brains, but WE ARE ALL BORN WITH THE SAME CAPABILITIES. We just have to be
taught to use them !!!!!
>>

I respectfully disagree with your reply. I don't think Jewish people could
consider themselves minorities. Keep in mind that there cannot be true
prejudice unless the person making the race distinction can really make a
distinction. You have no banner across your face saying "I"m Jewish." You
most likely look and speak like most other white Americans. African Americans
are not blessed as you are starting out with a clean slate. The prejudice
against them is a real as is their distinction in an all-white crowd. You're
blessed with a great intellectual and cultural history that withstood the test
of time. African Americans had their lives uprooted and the best way for them
to have the opportunities of enjoying our great hobby is to provide them
incentives to get their feet in the door. Hopefully, this will result in
future generations enjoying and actively participating in our hobby. Minor
incentives like dropping the code requirement might work wonders in this
regard. Other possibilities might include allocating a few frequencies on the
popular bands where only minorities would be encouraged to use. If potential
minority hams knew that certain frequencies were set aside for them to share
their culture, all hams would share in the experience. My idea is NOT to limit
minorities from using all frequencies, but only to give them the benefit of a
few special frequencies to share in the empowerment of their identity as a
great people if they so choose.

Well said. One should know the charges and be able to defend against those charges. If we permit anyone of us to be abused by the system, then we are all at risk and the
system is flawed.

I am not familiar with Herbs case - all the information I have about his loss of license and the various cases against him are from third parties - and I certainly stand with many
concerned that some how it may be that he is being treated unfairly.

However, I do recall the first time I encounter Herb on the air. During a period of about six months he and his followers seemed to be actively harassing the 20 meter phone
patch nets that operated at 14.313 MHz. At that time I was a "CINC's Watch Officer assigned to the United States Southern Command in the Republic of Panama. The
Southern Command operated a Search and Rescue service for much of the Gulf of Mexico, waters associated with Central America and the Caribbean. All of our military
aircraft and surface vessels equipped with HF communications equipment had 14.313 MHz listed as a frequency on which to contact licensed stations in the amateur radio
service - when ever the need arose to coordinate with vessels damaged, under siege, subject to attack, or who were simply in need of assistance.

Herbs' group made that coordination effort difficult to impossible at times. Operating from the apparent belief of self policing they harassed the phone patch nets - competing
with them for the frequency and ultimately caused them to move repeatedly during any period of operation. These attacks against the phone patch nets continued for the entire
three year period I was stationed in Panama.

Herb's activities and those of his followers often made a shambles of the nets in questions. These nets served a widely disbursed population of US citizens both aboard
vessels at sea and on land in foreign countries. Left to their own, these nets in many ways exemplified the very best that is amateur radio service. However, under the
constant harassment of Herb and his cronies the net frequencies became less then functional and at times were reduced to points on the band where the worst operating
practices were daily observed. During this period of time I spoke to Herb several times about his anti net activities. His response basically centered around his contention that

the nets were providing illegal phone patch services - and should be run off the bands. His efforts to disrupt these nets certainly generated numerous audio tapes, letters and correspondence to the FCC through direct amateur radio communications, communications from effected citizens and complaints filed through official government agencies all calling attention to the detrimental effect Herb's amateur radio activities were having on the regional nets the served Central America, the Gulf of Mexico, the Caribbean, and South America amateur radio relations and services.

Herb undoubtedly had a point - and the phone patch nets modified their operations to reflect his concerns - but that did not stop the harassment - and Herb continued to be what I choose to describe as a poor citizen of amateur radio.

I would not be surprised if this history of being a "poor citizen" on the ham bands didn't at least to some degree dictate the manner of punishment the FCC ultimately choose to levy against Herb.

Anyone who attends a ham club meeting would have to agree that certain minorities, especially, African Americans, are grossly underrepresented in our hobby. I believe, and I think many of you will agree, that perhaps we should remedy the effects of past discrimination by some sort of affirmative action allowing underrepresented minorities a FAIR OPPORTUNITY to get their tickets. Much has recently been reported in the last decade of growing "electronic divide" in the percentage of white versus black households having computers and Internet access. You would all have to agree that this "electronic divide" has ALWAYS been in the amateur radio hobby. This would be a perfect time in our country's history, especially in light of the dwindling numbers of potential hams lost to the computer hobbyists, to begin thinking about policies that might create real interest in our great hobby. My ideas of remedies for past discrimination include DROPPING THE CODE REQUIREMENT FOR MINORITY APPLICANTS and possibly WAIVING SOME SECTIONS OF THE EXAMS. Such remedies are a way to ensure an integrated society of amateurs and allow equal opportunity. Numerical goals for admission to our great hobby is necessary to integrate a hobby traditionally closed to minorities because of discrimination. At a time when our hobby needs a shot in the arm, these kind of policies might help in increasing our numbers and preserving our power to demand that no more of our frequencies be taken away. Any THOUGHTFUL replies are welcomed.

> you're talking about the higher frequencies, safety around 1500 watts is
> a real major concern.

Actually, the new ISO radiation safety standards for human exposure
can kick in at 50 watts or even less, depending upon distance to the source
and frequency. Because different organs and parts of the body might
"resonate" at different frequencies, it's not quite as simple as saying
that X-watts are safe at any frequency.

For example, at 1.2 Ghz, a 50 watt signal at close range may
burn cells in your eyeballs and heat the vitreous fluids. Think
of a 50 watt microwave beam vs. a 50 watt AM signal.
Which would you rather stand next to? :)

Doc sums it up for everyone with ..
>You shouldn't hang around with
> low-lifes like us. BYE... so long...

Hmmm ... not so fast there, people. Look how many times profit Davies promised to leave. And he's always back in a few days. If profit Davies can do it, so can this other malcontent.

Meantime I'll be carrying my HT anytime I see fit. Glad to hear y'all plan to do likewise.

And I agree, Ross. But I never said anything about the safety of wattage at any frequency. All I said is that the rules allow to use of high wattage, so the exams test for safey concerning high wattage.

So, if some guy can figure out how to do it safely on the higher frequencies (and the technology is available), than the rules allow him to try it. But, the FCC also thought it was a good idea to point out, in the exam, that he might be frying his eyeballs (and everything else) if he does not do it safely.

In other words, given the possible capabilities at our disposal, the exam and license serves a serious purpose.

I was emailed the following response (I deleted the sender's information) and
am posting my response to him:
>>>>>>>>>>>>>>>>>>>
Affirmative action would reduce the value of your license. There is NOTHING
based on race, ethnicity, or any other demographic, prejudicial about a ham
license.

Additionally, your proposal insults all of the legitimate progress made by
African-Americans. I'm black, and I'm offended that you would propose this.
>>>>>>>>>>>>>>>>>>>>>>>>>>
While I believe your response is sincere, I also believe your response is in
the minority in the African American community. I believe that Rev. Jackson
was also sincere when he said that African Americans want "not welfare but FAIR
share." As an African American, I think you should be more sensitive to the
plight of your people and just give them the benefit of the doubt to make up
for past wrongs. Great people like Rev. Al Sharpton have dedicated their lives
to protecting your rights; the least you can do is support the cause. For more
insight into affirmative action policies and their good on society, I encourage
you to check into the following sites and reflect on the good information they
contain:
American Association For Affirmative Action (www.now.org/issues/affirm/)
American United For Affirmative Action
(www.auaa.org/)
NOW and Affirmative Action
(www.now.org/issues/affirm/)
Your concern that "[a]ffirmative action would reduce the value of your license"
is unwarranted because the majority of license holders would still have to work
hard to pass the code; only certain minorities would be exempt from taking the
code test. It's no different from giving a minority member welfare; it doesn't
make my money any less valuable because I still have to work hard to earn it.
Thanks again for your sincere, although misplaced response.

Are you hitting the repeater, Zach? In other words, do you hear a repeater tail (the carrier for a few seconds after you stop transmitting), and usually a courtesy tone, after you unkey? If not, you're not hitting the repeater and nobody is going to hear you.

The next question is to see if you're even within the range of a repeater at all. Do you hear people talking on any of the known repeater frequencies? If not, then obviously there is not a repeater in your immediate area, and you're going to need a larger antenna to both hear, and transmit to, the closest repeater. A simple home-made j-pole taped to the inside of the barracks window might be enough to do the job.

Your best bet is to find out about the ham radio clubs in your area, attend their meetings, and find out from them what frequencies you should use for the repeaters closest to you (and to find out which repeaters others hang out on to talk). Use one of the internet search engines to find the ham clubs in your area (search for ham radio with the name of your town).

I hope that helps, Zach.

Probably that they're sold into worldwide markets each with different
legal limits. Just like there's no amateur transceiver or transmitter
sold new in the U.S. that will transmit on all HF frequencies up to 30
MHz. I had to dig to find the mod to my Kenwood TS850 so I could even
work my CAP network frequency that is barely outside the hambands.

Well, I would offer to take the radio equipment you've decided to get rid of (I could use a radio in my 98 Explorer), but the junk you have is probably garbage. Instead, I think I'll head down to the local coffee shop. The waitress there knows that I tip a lot better than most of the people driving those fancy cars (the payments are higher for those fancy cars).

You have got to be kidding. Only a total nut would suggest such a thing.

How about affirmative action for whites in some of the black universities around the country? Or affirmative action for whites on Black Entertainment Television? Or affirmative action for whites in the Congressional Black Caucus? Or affirmative action for whites in groups like Habitat for Humanity? Or affirmative action for whites in groups like the NAACP? Or affirmative action for whites in the Southern Proverty Law Center's actions? Or affirmative action for whites in the ACLU's actions? Or affirmative action for whites in the Justice Department's Human Rights investigations?

Unlike those things, anyone can participate in the ham radio community.

Re: AFFIRMATIVE ACTION NEEDED IN HAMRADIO!!!!!!!!!!!!!!!!!!!!!!...

This is an ongoing dialogue between Dight Stewart and Bob Sherin

Bob Sherin wrote:
[snip]
Growing up during the Civil Rights
movement with pics of Bull Connor
hosing peaceful people, George
Wallace blocking the college entrance
for blacks, and other manifest
discriminations, I became a champion
of that cause. Since, I've become
a scholar on so-called Black History,
which is really American History.
[snip]

Here is Dwight responding: You're right, Bob. You're the perfect product of the hollywood-induced civil rights movement, right down to the utter acceptance of the images hollywood offered (and is offering). Hollywood shows you George Wallace, and he becomes a racist (along with his supporters in that state). Hollywood shows you Bull Conner, and he becomes a racist (along with his supporters). Hollywood doesn't show you the racism within the black community, so blacks are not racist (they're out to right present and past discrimination).

Let me ask you a few questions. Do you really believe that blacks are seeking equality in this country? Do you really believe that the black movement in this country is not out to promote its own self-interest and self-gain? Do you really believe that affirmative action, racial quotas, black organizations, black television, or other inequalities favoring blacks, will end once blacks do gain equality in this country (or even later when they become the majority)?

Let me ask you another question? How long must whites suffer before you will feel they have been punished enough - before you feel they have paid for those "manifest discriminations?" I was a small child when blacks were forced to drink out of separate water fountains in the 50's, yet I've been forced to live with affirmative action and quotas my entire life. Will my children have to live with it their whole lives? What about their children?

In other words, when does it stop, Bob? When do whites get to be treated as equals in this country?

Dwight Stewart (W5NET)
http://www.qsl.net/w5net

Bob Sherin replies: Dwight, I've already said I'm not the final arbiter. In a representative democracy, the people ultimately decide on the classifications.

As to Bull Connor and George Wallace, though anything is possible, I have good reason to reject your contentions. You only have to look at George Wallace's later words and positions to realize that image in the college door was very real, as was the black student trying to register. Please explain your rationale for believing the Bull Connor fire hosing and dog attacks are fiction.

I stand by my opinion that it was very real.

Dwight, I understand just how you feel, as I saw reverse discrimination with my own eyes. As a middle aged, white male teacher in the inner city, I surely felt I was stereotyped by the naive kids as an "oppressive white." Prejudice being handed down in families, the kids were no doubt acting on what they had learned at "home.".

Still, that doesn't mitigate against reaching for parity. It is true also that Affirmative Action did aggrieve many whites. You have only to look at the Alan Bakkee case in the 70's to find a talented white who lost a place in college because of Affirmative Action.

As a parent of kids who grew up then, I can tell you that integrating the schools cost me a dear price. One of my children suffered being knocked around.

Still, I wouldn't have it any other way. I feel we've carried on the struggle that took root midway in the Civil War and have advanced it. Every step of progress has a downside, as does this. The people of these United States are the ones to strike the ultimate balance, not me.

Go to the South or Midwest and see the environment and conditions that many poor whites are living in. Yet, I don't see your compasion for these people.

And I certainly don't see the compassion within our government for these people - the overwhelming majority of federal aid is going to blacks and other minorities (especially when you look at Health & Human Services, HUD, the Justice Dept, Dept of Labor, etc.). When you add in the independent Agencies (Small Business Admin, Commission on Civil Rights, Equal Employment Opportunity Commission, and other such agencies) the divide widens even further.

By the way, we're not just talking about the South and Midwest. If you look around, you will find poor whites throughout this country. People like you just refuse to look.

And exactly where do you think the parents of white children are? Sitting around the house watching television while the kids play on the floor at their feet? Because of the huge loss in our spending power over the last thirty years, both parents now are having to work just to pay the bills. That means that our kids have no guardians for much of the day either. But again, I see no concern on your part for that.

If the minorites were really interesested at going
in to ham radio, then WHERE ARE THEY ? Is there
enough time to give up gangsta rap?? Basketball??
Study?? Wake up on this affirminative action bit,
Again if the so called minorities were really
interested then they would have be in attendance
years ago. I don't want to hear this BRAVO SIERRA
about being poor either and not affording the tools
to start to learn and get in the ranks. There are
a lot of folks who were born into a low income and
went on to become hams. A prime example the hams from
the 1930 depression era, they didn't have zilch
and they managed to get on the air. Now again this
other BRAVO SIERRA about injustices of African
Americans, why do we have to feel guilty for the sins
of our ancestors and apologize ?? Has anyone ever
apoligized to the Irish or Italians for they way they
were treated ?? Try this one during the peak of Irish
discrimination for jobs "Irish need not apply". So
wake up out there and put this stupid idea that never
works to bed. By the way if anybody is interested this
country is made up of minorities from every country!!

I know for a fact that Houston Tillotson in Austin is not in danger of closing. They have pulled their default rate down from 30% TO 15% in just 6 months, and they expect to half that by next year. The key has been more flexability by the lenders.

Also, Houston Tillotson is NOT part of the Texas university system. It is a private institution.

```
:> Only if there was a law in the US Code or a state law outlawing
:> possession of a ham radio by a non-licensed person. The comparison
:> isn't valid if no such law exists, since there is a law against
:> possession of pot.
:>
:> It's sort of like a person violating a part of the UCMJ while they
:> aren't in the military. The UCMJ only applies to military personnel.
:
:Several participants in this thread have their laws, rules and regulations,
:and levels of authority and jurisdiction mixed up.
:
:CB - no individual or station license required, but technical regulations
:are still in force and apply to anyone within the FCC's area of jurisdiction
:(USA and territories).
:
:This means that possession of an external RF power amplifier ("linear" -
:although that is only one kind of amplification and is the main type used
:for AM mode) that is designed or adjusted to work in the CB band is NOT
:PERMITTED FOR ANYONE in the above-mentioned areas. If you are a ham and
:have an 11-meter "footwarmer" and it is tuned to be maximally efficient in
:the 11-meter band, you are in violation. However, if your
:originally-11-meter amplifier is tuned to 10 meters or some other band,
:there is no apparent violation for a licensed ham operator. (The FCC might
:still ask for some form of certification or proof that the amplifier cannot
:be operated on 10 meters.)
:
:FCC has authority to regulate radios and their use all over the United
:States and its possessions and territories. It doesn't matter if any
:individual is licensed or not; the regs apply to everyone. If you're
:unlicensed, transmitting is prohibited. If you're licensed, the other
:regulations regarding proper operation and technical specs apply to you.
:
:Local police departments do not have jurisdiction to enforce FCC
:regulations. That is a Federal function, usually carried out by (depending
:on circumstances) the FCC itself, the FBI, and/or the United States
:Marshalls. A knowledgeable police officer may bring your unauthorized radio
:to the FCC or DOJ's attention, but he may not make an arrest or confiscate
:the equipment UNLESS there is a violation of some other statute that is
:within his power to enforce. If the officer knows that much about radio,
:she should also know all about the jurisdictional issues.

My state just gave local police the authority to make arrests for
violations of FCC regulations. Just as local cops can make arrests
```

for federal drug crimes or illegal aliens, all it takes is to have a
matching state law. Besides, we now have multi jurisdiction units
that are made up of federal, state and local LEOs that can arrest
for any crime.

:In the case of an 11 meter amplifier, a local officer could charge you with
:a relevant motor vehicle equipment violation if such regulation exists. If
:your radio transmissions are causing interference with audio or radio
:equipment belonging to someone else, you could be charged with some sort of
:"disturbing the peace" or "disorderly conduct" offense. Naturally, if you
:fail to cooperate fully with the officer to the extent required by law under
:the circumstances of your encounter, you can be charged with disorderly
:conduct or even some form of obstruction of justice regardless of
:jurisdiction on any radio issues.
:
:So, in short, while the police do not have jurisdiction over your CB radio,
:it will not be productive to rub their noses in the fact.

```
:> :>What concerns me is that we are seeing an increase of people using
:> :>radios, as guns were used before, to commit crimes. Drug runners are
:> :>using scanners and CB radios in chase vehicles to let the mules avoid
:> :>the cops.
:> . That is what
:> they are arresting people for. Using CBs and scanners to avoid
:> detection by the police. Look at this thread. Several people have
:> reported being stopped by the cops for having radios, all because the
:> drug runners are using them.
:
:Please people...those of us here that have experience with both sides of
:the dope trade are just plain laughing right now.
:
:Domestic drug numbers stations based in Indiana
: and using mobiles on CW???

Two seperate issues. The drug runners are using scanners and
out of band CBs in the escort vehicles.

The CW mobile stations are something else. It appears that
individuals of southern European heritage are transmitting some
type of number messages for whatever purpose. Given that there
are a number of Serbians in and around Chicago, who knows. But
hams have seen, and heard, transmissions while on the Indiana Toll
road.

:Hams being arrested or detained???

N9VKS was ticketed for illegal scanner usage
according to Popular Communications in the
Sept issue.

:Drug runners in and around the ham bands???
:
:And the cops in Indiana are stupid enough to believe it???
:
:First off.....
:The Indiana cops probably turned the musings of a tweaker (meth user)
:into a pretty tall tale, after finding a CB in his truck after a search
:and arrest.
:
:Second...
:NO drug cartel worth a 10 spot of crack is going to use CW (smoke
:signals) to move the product around in the states. If they are stupid
:enough to use a ham radio then they must really be amateur.
```

:
:Third...
:Ham radio operators make crappy drug runners. Do I really have to
:qualify that.

But ham radio would make a good cover for having a scanner if you
were a drug runner. Or involved in some sort of spying.

:Fourth...
:Felix Areallano and his brother can afford to buy encrypted astros from
:Motorola S.A de C.V. with no questions asked if needed.

Therefore the cops would be looking for any type of radio activity.

:> :>And it looks like someone in the Chicago area is using their ham
:> :>license to cover a spying network. Too many in the Gary-South Bend
:> :>-Mishawaka-Elkhart area are hearing mobile ham stations trainsmitting
:> :>number type broadcast, in and around the ham bands.
:
: Sunspots playing tricks.

Not when the car passes you on the toll road and overloads
the front end of your radio.

:
:> I personally saw a guy with ham plates
:> blow by me, jamming the front end of my receiver with
:> a number type mesage in CW on the lower end of 20.
:> Others upstate are reporting the same thing.
:
:Or just another idiot jammer...
:>
:> :>Therefore the cops are looking hard at anyone with a radio.
:
:At the most the cops are dealing with a major meth problem in the
:midwest and some of the tweakers have been arrested and in possession of
:some box with a mic attached...the word spread among the patrol ranks
:that "the tweakers were on CB"(big surpass eh).
:
:When the DEA and FCC start pulling over cars with antennas then you
:MIGHT have something to really worry about.
:
:There are plenty other reasons why this is nothing more than a fantasy
:in it's current form.
:
:I'm not saying that radios are NOT used...but any decent smuggler knows
:the proper use of radio equipment and freq spectrum for any give
:task.
:
:Remember they have a lot more money and resources than the Indiana cops.
:Except for the tweakers...they are poor and stupid.
:

:If you put a "tweakers suck" bumper sticker on you car, they would most
:likely leave you alone.
:
:> :The Cops wouldn't know a numbers station if it was transmitting
:> :in their car!
:
:Yah Huh....they have a special doggie for that.
:
:> There are a number of ISP troopers who are also military intelligence
:> analysts in the Guard or the Reserves. I would expect that they have
:> some exposure to signal intelligence.
:
:They can probably tune in a signal and listen...but the military is not
:really trained real well in drug interdiction, let alone domestic drug
:interdiction. The fact the police have those people on staff does little
:good if the PD does not provide monitoring hours and a shitload of
:equipment.

That is why reserve Intel folks are being put on active duty and
loaned to the DEA and FBI to help the locals. Plus if a cop is also
a member of the Guard or Reserves and is trained as intelligence
analyst then the cops get the best of both worlds. And there are a
number of cops who are 96Bs in the state of Indiana.

As far as the equipment, just hook a AOR8200 into a laptop computer.
Or use an Optoelectronics Scout.

:>
:> :And they have LITTLE authority to do anything about it even if
:> :they find such a station.
:
:And trying to prove it was used to evade cops would be fun also.

No they use it as an excuse to pull you over. Then search the car.
The radios are destroyed if you do not have a license. And you
get a ticket for a class B misdomeanor ($500 fine). Plus whatever
else they find.

:>
:> They can gun you down if you mouth off. It is called resisting
:> arrest.
:
:Jee
:In california the cops just beat you.

The California cops have gunned down their share.
One black woman who was sleeping in her car (I think
it was in Riverside). Then the LAPD was having a contest
to see who could shoot the most gang bangers.

U.S. amateur equipment is only a small regulatory step away from being fully type accepted, in which case there is no real reason for amateur radio to be treated any differently than other radio services.

With type accepted equipment, and type accepted antennas, installed in an FCC approved way to prevent radiation exposure, we are rapidly approaching the day where a ham station will consist solely of appliances fully regulated by the government.

When that happens, the bureaucrats in Washington will see little difference among CB, the FRS, or amateur radio and will be tempted to combine them into one service for administrative efficiency.

I happen to think that day is close upon us. The first step will be to declare CB operators to be a special class of amateur licensees. Mark my words.

They seem to have done this already, in 97.519(d). The application of
this rule seems to be reserved for people who annoy the FCC, however, so
I guess you only need to keep up-to-date if you plan on annoying the FCC.

Wait a minute.... Does not ALL commercially sold ham
gear already must be tested for type acceptance by the FCC
for compliance BEFORE it may be legally (commercially) sold
via retail?

What am I missing here?

> With type accepted equipment, and type accepted antennas, installed in

It already has. it's called the "U.L.S." program. (..give ur SSN on form
610)

> I happen to think that day is close upon us. The first step will be to

This will never happen, UNLESS and ONLY UNLESS the FCC does away
with the present necessity to obtain a FCC Licence & callsign for ham
operations.
I do not see this happening anytime in my lifetime - and I am just 22.

You know, life sucks so much that I don't blame people for wanting drugs to make life bearable.
On the other hand, the only radio operators I hear doing drug smuggling is mexicans and columbians
at night on the shortwave bands.

Quite possibly. I see one mention of a 'license' being required.
Anyone remember when they discontinued that for CB? They eliminated
the requirement of a commercial license to repair the CB rigs. I see
one post that the 'codeless tech' is essentially a CBer. That, while
untrue, does show that amateur radio is being deregulated. No, I find
that morse code is an old technology and quite unnecessary; however,
the Q&A manuals and the tests themselves are simply a little icing to
obfuscate the fact that the alleged 'tests' are so simple that anyone
could probably pass almost any class ticket within a week or so. The
FCC really doesn't care - as long as no one complains. The happy HFers
go on and on with perhaps kilowatts and as long as they don't bother
anyone, no one minds. Frankly, what with the internet and cell phones,
about the only people being attracted to radio these days are the
people who enjoy jamming other people - that seems to be the big
attraction. Who knows? I doubt amateur radio will disappear, but the
combination of services does not appear to be impossible nor even
highly unlikely. Oh well ... better start studying for proper
operation of the new service. Hey, gotcher ears on?

Name me one homebrewer who submitted his radio to the FCC for type acceptance
and who did NOT go into production to sell his design to others. Not everyone
is an "appliance operator."

> With type accepted equipment, and type accepted antennas, installed in
> an FCC approved way to prevent radiation exposure, we are rapidly
> approaching the day where a ham station will consist solely of

Sorry. Non-sequitur. I didn't see any mention of the outlawing of
homebrewing. Just how did you arrive at this delusion?

> When that happens, the bureaucrats in Washington will see little
> difference among CB, the FRS, or amateur radio and will be tempted to

As another respondent said, ULS already does that - at least for those services
that require licensing.

> I happen to think that day is close upon us. The first step will be to
> declare CB operators to be a special class of amateur licensees. Mark
> my words.

Will be? You mean, it hasn't happened yet?

Jason, I'm not going to 'shot it down'. I do have a couple of
questions. I do get a chuckle or two everytime I hear about the
current licensees retesting to renew. I had my novice ticket in 62, my
general in 64, and my extra in 66 (I also took my commercial telegraph
ticket test - and got that - the same day I took the extra). I
obtained my 1st phone in 65. I let all of my tickets expire sometime
around 1981-82. I decided to get the tickets back in 1993 and called
the W5YI group and found out the tests were restarting for the fall the

same evening I called. I called around 3 PM and the test was at 7 PM. I had not copied morse code since 1969. I passed (even the 20 WPM CW test) and got my extra back. I also decided to retest for the GROL (since they eliminated the 1st phone). Passed that too. I was looking around for work in broadcasting (been there, done that - including a stint as chief engineer of a 5,000 watt AM-FM station) and found they keep changing their rules. I am happy back working in robotics. I find many people want to keep changing the rules to keep the 'wrong' people out. Ok. Didn't we try that back in the '60s? With what result for amateur radio? The tests should be an entrance exam into amateur radio, not the final exam for a PhD in electronics or physics. My own feeling is that we should be an inclusive hobby. We had fun back in the early and mid 60s - only three classes of license - novice, technician, and general. As far a safety, I agree with you. Operating proceedure and safety (as well as some rules, perhaps, including band ends and modes permitted therein). Just basic stuff, or would you include a complete test on the National Electric Code? I feel we should make sure someone is ready to START learning and having fun, not that they are ready for a post-graduate course in electronics. Can't we all just be hams and have fun?

Years ago, whilst at Great Lakes naval training center (after boot
camp), I went to look up the ham club and join. I found the place,
went in and there were four dour-faced guys who handed me a long list
of their 'regs'. I had to read it and agree to it - I told them I'd
look it over and left. Along the way back to the barracks, I saw a
sign which read '73'. Hmmm ... another ham club? I went behind the
building and there was a barbeque going on. Guy AND GALS! I was
welcomed and pulled into the building. Oh oh ... a CB club. Hmm ... I
needed a license. (yes, the CBers were licensed back then in the
late '60s). If I didn't have a license, they had the forms and would
help me! Well, I pulled out my wallet and produced my 1st phone
license - that worked wonders! Instant membership, plus 3 radios to
fix. Hey, have some ribs! Have a beer (no, wait till I'm finished
with the radios). I had a ball. Yes, I joined the CB club and NOT the

ham club (despite my having my extra ticket). Guess why? Are you like one of those dour-faced guys and then lays the blame on someone else for not joining?

73s from Rochester, NY

stewartx@sccoast.net (Dwight Stewart)

Bob Sherin wrote:

[snip] Go into any inner city and see the environment and conditions.
[snip]

Go to the South or Midwest and see the environment and conditions that
many poor whites are living in. Yet, I don't see your compassion for
these people.

Dwight responds: And I certainly don't see the compassion within
our government for these people - the overwhelming majority of federal
aid is going to blacks and other minorities (especially when you look at
Health & Human Services, HUD, the Justice Dept, Dept of Labor, etc.).
When you add in the independent Agencies (Small Business Admin,
Commission on Civil Rights, Equal Employment Opportunity Commission, and
other such agencies) the divide widens even further.

By the way, we're not just talking about the South and Midwest. If you
look around, you will find poor whites throughout this country. People
like you just refuse to look.

Dwight quoting an earlier post from Bob: Try to call some of the Fathers
and
Moms and you get gas stations, pay
phones, girl and boyfriend's homes.
Effectively, many have no guardians
and are thrust into a cruel world,
which they repeat. And hence the
cycle goes on.

Dwight responding: And exactly where do you think the parents of
white children are? Sitting around the house watching television while
the kids play on the floor at their feet? Because of the huge loss in
our spending power over the last thirty years, both parents now are
having to work just to pay the bills. That means that our kids have no
guardians for much of the day either. But again, I see no concern on
your part for that.

Dwight Stewart   (W5NET)
http://www.qsl.net/w5net

Every cause focuses on an aggrieved group. Mine is no different and should not be interpreted as foreclosing anyone else from the relief they seek.

My deep feeling is in my background. As a Jewish kid growing up in a non-Jewish neighborhood, I felt pilloried with the charge: "Christ killer." Of course, as a society we've moved beyond that.

Growing up during the Civil Rights movement with pics of Bull Connor hosing peaceful people, George Wallace blocking the college entrance for blacks, and other manifest discriminations, I became a champion of that cause. Since, I've become a scholar on so-called Black History, which is really American History.

Even the History is still on its head. When I called the Florida Board of Education about the First Free Integrated School in Florida (February 29, 1864), a voice said: "One moment, I'll give you the General Counsel." Historically unproductive, Florida is loath to tell the story of the Union Army planting this school in Jacksonville during their last occupation.

Thus, my sensitivity doesn't contemplate leaving any group out. I am simply not educated on the direction you're undertaking, though I know, getting your points across, doesn't require impugning my golden motives.

860. Inside the KV4FZ Story; What the Government is Hiding

Newsgroup: rec.radio.amateur.misc
Date: 2000-09-17 00:00:00 UTC
From: Trebb@webtv.net

Chapter 1, the Parallel

September 16, 2000
from The New York Times
ABROAD AT HOME
It Did Happen Here
By ANTHONY LEWIS

OSTON - In excoriating officials for their treatment of Wen Ho Lee, Federal District Judge James A. Parker said one question remained unanswered: "What was the government's motive?" There is an answer to that question, a chilling one. It is: politics.

In the winter of 1999, Republicans found what they thought was a promising theme. The Clinton administration, they said, is soft on Chinese nuclear espionage. It was an updated version of the charge that Richard Nixon and others had used so devastatingly, that Democrats were soft on Communism.

Dan Quayle charged the administration with "appeasement" of China in "espionage involving our most critical secrets." Republicans in Congress attacked the president's national security adviser, Sandy Berger, for supposed laxity in dealing with Chinese spying. Conservative columnists joined the chorus.

A House committee under Representative Christopher Cox, Republican of California, issued a 900-page report saying that China had been stealing our nuclear weapons secrets. Experts pointed out that the report was long on conjecture and short on evidence. But the committee's Democrats, evidently panicked, joined it without dissent.

The Clinton administration moved quickly to meet the Republican attack. Among other things Bill Richardson, the secretary of energy, appointed a "security czar."
Then a villain was found ☐ someone to blame: Wen Ho Lee, a scientist at the Los Alamos National Laboratory. In March 1999 he was fired. In December the U.S. Attorney's office in Albuquerque, N.M., had a grand jury indict him on 59 counts of mishandling nuclear secrets ☐ with a potential penalty of life in prison.

In the months after that indictment Mr. Lee was painted in the darkest tones. He was said to have compromised the "crown jewels" of U.S. nuclear weapons. Government investigators compared him to Julius and Ethel Rosenberg, who were convicted of giving atomic secrets to the Soviet Union and executed in 1953.
Prosecutors gave Judge Parker, as he told Mr. Lee the other day,

"information that was so extreme it convinced me that releasing you, even under the most stringent of conditions, would be a danger to the safety of this nation."

At the prosecutors' urging, the judge denied bail. Mr. Lee was held in what Judge Parker called "demeaning, unnecessarily punitive conditions" ☐ in solitary confinement, allowed to exercise only an hour a day with his legs shackled, the lights kept on in his cell 24 hours a day.

In recent months the hyperbolic picture of Mr. Lee and his supposed offenses faded away. Robert Messemer, an F.B.I. agent who testified that in two incidents Mr. Lee had been deceptive, admitted that his account of those two incidents was false. It was "an honest mistake," he said. The great secrets to which Mr. Lee had access ☐ and of which he had wrongly made computer tapes ☐ turned out to be not so secret. Many had been available in thousands of sources.

But no one in the government backed off. Prosecutors continued to insist that Mr. Lee was a terrible danger to the nation. It was Judge Parker who pierced the stubborn denial of reality. When he made clear that he had had enough, prosecutors signed a plea agreement that let Mr. Lee go with the 278 days he had served in prison. It amounted, Judge Parker said, to a concession "that it was not necessary to confine you last December or at any time before your trial."

I do not think that Secretary Richardson or Attorney General Janet Reno decided overtly to use the Lee case for political purposes. I think that, feeling the political pressure, they allowed their judgment to be shockingly distorted.

For the Justice Department especially to go on and on with a case so weak is profoundly disturbing. To let the terrible weapon of criminal prosecution be used in a politically convenient way is a hallmark of tyranny.

The lead prosecutor in the case, George Stamboulidis, unregenerate after Mr. Lee's release, suggested that Judge Parker did not understand the national security issues. To the contrary, this country's security rests in good part on having judges with the character and courage, like Judge Parker, to do their duty despite prosecutorial alarms and excursions.
A. Lewis, N.Y. Times

Chapter 2, KV4FZ: When the Feds Fanned Out by Bob Sherin, W4ASX

It was shortly before Hurricane Andrew, 1992. I had been invited to St. Croix, all expenses paid. From the airport, we twisted some twenty minutes through the old island, turning up a dirt road where we bounced slowly to the top of a hill and stopped. Herb, Monika Shoenbohm and I got out of the car.

The scene was breath-taking: standing atop a one hundred foot cliff, the shimmering Caribbean, turquoise in color, danced gently as far as the

eye could see, etched by a receding sun that highlighted St. Croix's tropical allure. Close by was a seventy foot tower crowned by monobanders, an unmistakable clue that a zealous ham lived nearby. This had to be the best ham location in the world!

Next day, a world away, we entered the island's, old federal Courthouse. (A new one has since been built.) I was told to sit outside the courtroom in an old veranda appointed with rickety chairs. During my few days wait there, characterized by dodging real time pigeon droppings in soaring temperatures, I would see a panorama of intrigue unfolding.

Like musical chairs, witnesses came and went. Except for some amiable FCC guys, people showed their animus against Herb as they buzzed secretively. An aura of importance underscored this scene, one I could never have imagined if I weren't seeing it with my own eyes.

The grapevine soon told that I was there to assist Herb, and the human dynamic changed from a modicum of warmth to ice cold. Some would not sit next to me or within ear shot. Education about federal prosecution was just beginning.

At lunchtime the Court took recess. Herb and Monika invited me for lunch a few blocks away. As we strolled, taking care to step up and down the curb stones of zaney sizes, we were followed by several of the trial people. We arrived at the restaurant, quaintly decorated with smart woodwork. Sipping my drink, I surveyed the lunch crowd with the natural curiosity of a tourist.

I noticed the same people from the trial sitting nearby. Herb pointed out the prosecutor. Others remained nameless during the entire ordeal, but I would see them everywhere. And whenever I used the telephone back at Herb's house, I heard suspicious clicks.

Some one million dollars was poured into this prosecution. The Secret Service and FBI, which had interviewed dozens of witnesses on the island and in the States, were there in force. It didn't take a genius to determine, they were scrutinizing our every move.

Herb, strong minded, outspoken and, at times, using very bad judgement, had made many enemies. As one of the Republican party faithful, he had exposed corruption and wrongdoing, impacting the careers of many, including the Governor. He had also rankled many hams.

I first met Herb in the mid-eighties at Miami International Airport. Seeking something meaningful in my ham life, I was there to interview him about the telephone, toll, bypass feud polarizing the ham community. Herb had taken a stand against the Intercon Net for allegedly misusing amateur phone patching. He often pointed out that the Jim Jones' group had used Intercon for some of their business. Herb was just the kind of subject I needed: hot news for information bulletins and print journalism.

Only the future would tell how hot the story would become. As Mr. Law and Order, Herb had raised the bar of justice for himself and created a coterie out to get him.

When Caribbean Long Lines Services started operating on St. Croix, Herb mailed a one hundred dollar check as enrollment fee. That check, which the prosecution tried to cover up, was never cashed. Meanwhile, the irrepressible Herb was fascinated by new telephone technology. His mind danced with protocols, frequencies, coverage, and entry codes.

He began hacking to learn how secure the system was, astonished to find that one out of three numbers went through. This new company, Calls, had virtually no security. Wrapped up with his discovery, he discussed it openly, including on ham radio.

His enemies joined forces, writing thousands of letters to the FCC, Congressmen/women, President Bill Clinton, the FBI, the Saint Croix Avis and prosecutors assigned the case, among others. One theme recurred: Here was a Guy who needed to be stopped. His open talk about Calls' security was ideal corroboration. Talk of a widespread plot could readily be heard on 20 meters, albeit cloaked in righteous indignation for Herb's conduct toward Net activities.

At the same time, new legislation was being enacted to thwart credit card crime and funded to go after exemplary cases. Herb was in the crosshairs: The million dollars was spent on building this one case against him. But in order to return a conviction, the government had to prove more than $1000 telephone fraud.

No such crime, in fact, existed, so they fabricated a printout with phoney charges that rose slightly above the minimum. The fact, the alleged recipients didn't know Herb and hadn't talked with him didn't matter.

The prosecution, with the cooperation of the investigators, invented telephone calls out of thin air of peope who in reality had denied to the Secret Service taking with Herb. The prosecution expert, John Ackley, testified to the authenticity of the list, and the Secret Service testified that they had interviewed every recipient of every call.

Exculpatory evidence hidden throughout, the trial opened with the prosecutor pointing his finger at Herb and telling the jury that here was a kingpin of crime. The case had all the appearance of being open and shut. To bolster guilty verdicts, computer printouts were piled high around Herb, as was forced to take the stand to refute them. The scene was high-tech countrpart of old time scenes long ago forbidden: Defendant brought before the jury in handcuffs and leg irons.

Only after the trial was Herb able to research the calls listed. One was a Franklin Gell of Miami,Florida. I looked up Mr. Gell in his Little Havana home. Warmly welcoming me, he offered me a cup of Cuban coffee. We sat at the kitchen table where I produced the printout. Yes, we were looking at his Miami telephone number, but he said he didn't know any

Herb Schoenbohm.

I asked him if he could document his telephone calls. Returning from a closet with an old leather binder, he searched his records. Although he hadn't ever talked with Herb, he was in contact at the time with a colleague on St. Thomas.

Here was a bold faced deception involving many on the prosecutorial team: random calls having nothing to do with him had been arbitrarily connected to Herb. The Judge reversed two counts of his conviction. One count remains to the time of this writing: "possession of a counterfeit access device with intent to defraud."

What is the device? Numbers in Herb's head. Not one number or any precise number but some number. And with the printout falling, any semblance of a number has vanished from whence it came: thin air. (The FCC, in its administrative action, ruled that the vaunted Miller tape proved no illegality.)

Talk about Constitutional rights denied, prejudice, hatred, punishment for political views, recrimination for other behaviors, justice has been turned on its head. In short, the pending felony conviction is a red herring.

Those of us who see a certain arrogance in Herb need also understand what it is to fight political persecution. How contrite could you be if you were similarly beleaguered?

Truth be known, the FCC misused its power when it put KV4FZ under oath and expected him to be forthright. As long as his judicial process was pending, Herb Schoenbohm had Constitutional rights protecting him against self incrimination and to due process, which were out of concert with even a de minimus confession.

If justice be done, the FCC will lose its discretion grounded in his felony conviction to exact the most extreme punishment against a ham: taking his license.

```
:> U.S. amateur equipment is only a small regulatory step away from being
:> fully type accepted, in which case there is no real reason for amateur
:> radio to be treated any differently than other radio services.
:>
:> With type accepted equipment, and type accepted antennas, installed in
:> an FCC approved way to prevent radiation exposure, we are rapidly
:> approaching the day where a ham station will consist solely of
:> appliances fully regulated by the government.
:>
:> When that happens, the bureaucrats in Washington will see little
:> difference among CB, the FRS, or amateur radio and will be tempted to
:> combine them into one service for administrative efficiency.
:>
:> I happen to think that day is close upon us. The first step will be
:to
:> declare CB operators to be a special class of amateur licensees. Mark
:> my words.
:>

:
:Quite possibly. I see one mention of a 'license' being required.
:Anyone remember when they discontinued that for CB? They eliminated
:the requirement of a commercial license to repair the CB rigs. I see
:one post that the 'codeless tech' is essentially a CBer. That, while
:untrue, does show that amateur radio is being deregulated. No, I find
:that morse code is an old technology and quite unnecessary; however,
:the Q&A manuals and the tests themselves are simply a little icing to
:obfuscate the fact that the alleged 'tests' are so simple that anyone
:could probably pass almost any class ticket within a week or so. The
:FCC really doesn't care - as long as no one complains. The happy HFers
:go on and on with perhaps kilowatts and as long as they don't bother
:anyone, no one minds. Frankly, what with the internet and cell phones,
:about the only people being attracted to radio these days are the
:people who enjoy jamming other people - that seems to be the big
:attraction. Who knows? I doubt amateur radio will disappear, but the
:combination of services does not appear to be impossible nor even
:highly unlikely. Oh well ... better start studying for proper
:operation of the new service. Hey, gotcher ears on?
:
:73s
:Jim AA2QA

I see it going the other way. Getting rid of unlicensed CBers,
arresting the outlaws and making scanner and SWL listeners
```

get ham licenses.

The cops are having big problems with drug runners using escort vehicles with scanners and out of band CBs or VHF handhelds to avoid the cops. The cops are afraid that the drug runners might get ham licenses to avoid arrest for possession of illegal scanners.

There is also the problem of foreign nationals using ham equipment to communicate for purposes of spying.

If anything the cops want stricter laws, just as with guns. And code isn't the answer as foreign nationals will be more likely to pass a code test than US citizens. If anything the cops would like to see ham radio, scanners, and CB radio banned. If the public can not communicate then they can not rebel.

The UK is having the same types of laws against scanners (it is unlawful to listen to anything that you are not licensed to transmit except for amateur radio and broadcast), guns, and restrictions on Internet communications (one must post one's true ID, MI5 must have a copy of any encryption keys, and MI5 can read your email). And the Bobbies do pull you over to check for illegal radios, guns and whether you have ag diesel fuel in your tank.

The student default rate at private colleges in Texas has nothing to do at all with the Governor. Heck, he has so little power and authority as governor of Texas that he can hardly lay claim to either any successes or any failures. If you care to blame anyone in Texas, look to the Lt. Gov. who actually runs the state through the legislature. Remember, Texas' governor was de-tuned during Reconstruction, never again to have much political clout, and only during very recent times has the office been a 4-year job. Sorry, you can't blame George W. for the college's failures, even if he IS a dufus.

Speaking of ag fuel, has anyone ever heard of anybody being caught in the states using ag fuel in a private vehicle? Every time I pull my Suburban into the local fillup, I see about a 75-cent difference between road and ag fuel.

868. Re: N9VKS: Indiana ham arrested for having a scanner

Newsgroup: rec.radio.amateur.misc

I'm a little bit confused about the following post. If the Communications Act of 1934 created the FCC and gave it exclusive powers to regulate radio, how can a state decide on its own to enforce FCC regulations? My impression has been that they can't without Congressional action. This, I understood, was the reason for the House Bill of a couple years ago that was to give such authority. However, it failed. So if it is OK for states to enforce FCC rules, why was that initiative necessary? It would seem that Indiana is looking for some constitutional troubles if they were to pursue this. Are they suffering from paranoia? Here in NC, I know of NO statutes against scanners in vehicles, nor anyone hassled just because they have an antenna on their car.

Ohio/Penn DX Bulletin No. 477

The Ohio/Penn DX PacketCluster
DX Bulletin No. 477
BID: $OPDX.477
September 18, 2000
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AD1C, KA2AEV, W2FXA, WB2YQH/WB2RAJ & The 59(9) DX Report, NM3S, W3UR & The Daily DX, N4AA & QRZ DX, N4CT, W4WX, KU6J, K8YSE, CT1EAT, CT1EEB, CT1END, DJ5AV & DX News Letter, EA5RM, EA5XX, F6JSZ, GW3CDP, HA0HW, IK2DUW, JA1ELY, JA1HGY, JA1MXY, JH7IMX, VK2RD, VK4AAR, YO3JW, DL2GG/YV5 and 9M2TO for the following DX information.

30 METER SLIM. Several report working a station signing VU2TS on July 30th. Raj, VU2ZAP, reports that he talked to Miku, VU2TS. He states that he was not active on 10 MHz.

3B6, AGALEGA. The following is an excerpt from a huge press release that was sent out this week by Carlos, CT1END: " The preparations for this DX-pedition will soon come to a close. Everything is running according to plan. On September 23rd, Karl, HB9JAI and Jack, F6HMD head for Agalega in order to make final preparations on the spot. The rest of the crew takes off October 1st, flight MK071 from Zurich, 2200 local time." The crew will be missing two Swiss members who cannot come to 3B6. HB9JAX, Adolf, had to cancel the trip for professional reasons; HB9FMU, Phil, because of severe health problems. However, the team has been completed by the following operators: 9A4DU/Tony, CT1AGF/Luis, G4EDG/Steve and DL6UAA/Mart. Activity will begin about October 8th ending October 25th. OPDX InterNet Subscribers will receive the complete press release as an additional bulletin.

3D2, FIJI. Look for Dragan, Z32AU, to be active as 3D2AU from September 18-26th. Activity on all bands CW/SSB are expected including 6 meters. QSL via Z32AU.

3W, VIETNAM. "The 59(9) DX Report" reports that Hans, WA1LWS, is planning to be active from here between November 9-26th. This will include the CQ WW CW Contest. He has applied for the uses of 80, 40, 20, 15 and 10 meters, however, 80/40 meters may be doubtful. He operates exclusively on CW.

9K2, KUWAIT. Look for Bob, K4CY (ex-N6BFM), to return to Kuwait. He plans to reactivate his old callsign 9K2ZZ. He is expected to be active this time on PSK31. QSL via W8CNL, direct only.

9X, RWANDA. Charlie, N4CT (ex-T5CT, SV0CT, G5BAU, GC5BAU, TJ1AW, K4PHY/YV5, DL5IX) will be in Kigali from January 12th through March 12th working at the U.S. Embassy. He is currently looking for some place to guest operate while there and would appreciate any info on where he might be able to. His E-mail address is: n4ct@onebox.com

A5, BHUTAN. A52FH is now history. All operations were stopped on September 14th, at 0125z on 20 meters CW. The team managed to make 14,015 QSOs, but this is not the final result. According to Mark, F6JSZ, the team thanks everyone for contacting them and especially Rafik, F5CQ, and Laurent, F8BBL, the two pilot stations. They say it was a fabulous experience to operate from Bhutan. Last week before leaving, F5LMJ and F2VX installed a 40/80m dipole and a Cushcraft R8 vertical, with a FT-900, TS-440 and FL-2100Z at the radio club of Thimphu. On September 12th, at 1500z, the first QSO was made by Thinley Dorji, General Director of Telecommunications in Bhutan, with the new A51AA callsign. Later in the week, Peter, ON6TT, was operating from A51AA. He was last heard on September 16th.

AX9, NORFOLK ISLAND. "The Daily DX" reports that a multi-national team of YL operators from seven countries will be active as AX9YL from October 5-12th. The team will be active on CW and SSB. The special callsign was obtained by the WIA Victoria for this trip, so QSL will be via the VK3 bureau or direct to VK3DYL, Gwen Tilson, 3 Gould Court, Mt Waverley, Victoria 3149, Australia, with return postage and a SAE.

CE0Y, EASTER ISLAND. Yuij, JA3IG, was very active this past weekend on 15 meters CW/SSB. Length of stay is unknown. QSL via JA3IG.

FG, GUADELOUPE. Four members of the Florida DXPedition Group (FDXPG), Bob/KR4DA, William/N2WB, Bill/W4WX and Clarence/W9AAZ, will be here from October 24-31st. They will be a Multi-Single entry in the CQWW Contest as FG5BG. Look for them before and after the contest signing FG/homecall on CW, RTTY and SSB. QSL FG5BG to KR4DA, FG/N2WB to N2OO and others to home callsign. For more info, visit the following two Web pages:
http://www.geocities.com/n2wb23/
http://members.xoom.com/FDXPG/

HO, PANAMA (Update). Wil/DJ7AA, Manfred/DK1BT, and Tina/DL6MYL are now active as HO1A from Contadora Island (NA-072) until October 1st. Their activity will include the CQWW RTTY Contest. Outside of the contest, they will be mainly active on CW, the WARCs and lowbands. They mentioned on the air this past weekend NO RTTY until the contest. QSL via the bureau to DL6MYL or direct to her CBA. Check out their very interesting Web page for more details at: http://www.qsl.net/ho1a

HQ, HONDURAS (Update from OPDX.472/473). By the time you read this, HQ0R will be on air from "Valle de Los Angeles", 20 miles from Tegucigalpa, Honduras. There will be 3 stations active, 24 hours a day, operating on SSB, CW and RTTY on all bands. Operation is organized by "Radio Club

Tegucigalpa" and URE, "Union de Radioaficionados Espanoles" and its RADIOSOLIDARIDAD special team. QSLs go via EA4URE, P.O. Box 220, Madrid 28080, Spain. For more and up-to-date information, check the WEB page at: http://www.ure.es/honduras/honduras.html

IOTA NEWS.....
EU-004. Laci, HA6NL, will be on Mallorca Island with his family for a holiday between September 28th and October 5th, and be active as EA6/HA6NL/p. He plans to be on all HF bands, mainly CW, but expect some SSB operation, too. Suggested frequencies are: 1831, 3511, 7011, 10104, 14031, 18081, 21031, 24901 and 28011 kHz. QSL via CBA.

EU-067. Look for Eric, KU6J, to be active from September 21-28th, and operating from Thira Island (aka Santorini) in the Cyclades group, Greek Islands (SV8). His callsign will be SV8/KU6J/P. His equipment includes an IC-706MKIIG (100W), dipoles and random wire with antenna tuner. He will be focusing on CW, primarily on the WARC bands. QSL via KU6J either direct or via bureau. Eric also mentions that he will be logging manually, so there will not be an online log available. He also added that his YL reluctantly allowed him to bring the radio suitcase, so this won't be a full-time operation!

EU-183. Pit, YO3JW, is planning activity from Sacalinu Mare Island between September 29th and October 1st. This will be a 72 hour operation (longer or shorter depending on local conditions). He will try to work on all bands, CW, SSB, may be RTTY and PSK31. He will also take a beam and a 100 watt radio. QSL via YO3JW.

OC-067. Francisco, CT1EAT, will sign FO0FRA, from October 24th through November 2nd, from Mai Mona Motu. He will also operate during the CQWW DX SSB Contest. He is not sure yet if he will use a his callsign or a special one. He will let us know ASAP. QSL via bureau to CT1EAT, or direct to: Francisco Costa, P.O.Box 172, 7801-902 Beja, Portugal.

OC-212. A team of VK operators will be using the callsign VI2BI to activate Broughton Island from October 6-15th. This follows the successful operation of last year when, in 3 days, the team made over 2000 QSOs. Activity will be on most bands for the duration of the operation and will involve SSB, CW 10 meters FM and hopefully PSK. The team will arrive on the island at approx. 0200z, October 6th and expect to be on air around 0500z.

OC-234. Browse Island Saga Update. Alan, VK4AAR, informs OPDX of the following: "I apologise that I didn't follow up with the drama on Browse Island in the first few days of this month. Things were happening and I was spending a great deal of time

on the phone to authorities and the wives of the team
(scattered all over Northern territory and Western Australia).
The outcome was that the operators were picked up by an
Australian naval vessel and eventually delivered safely to
Darwin. The skipper stayed with his catamaran (which was his
home also) as he believed it could be refloated even doing so
alone. He has radio and is being monitored. Browse Island
produced only 2,500 (approx) QSOs as the crew spent most of
their time digging sand away from the vessel which was above
the high water line. The expedition was more costly than
expected due to this occurance so, if you are able, please
feel free to donate a little something with the QSL card. It
will be greatly appreciated."

SA-058. Ray, DL2GG/YV5, and others will give it another try to
activate the rock Farallon Centinela. If all works as planned,
they will be active as YW5FC next weekend (September 22-24th).
Last year they could not get their generator up to the rock
due to extreme tides (see their failed trip to Farallon
Centinela at: http://www.kilohertz.de
http://www.qsl.net/dl2gg
Now they are supposed to get some help by a helicopter.
QSL via W4SO.

KH0, MARIANA ISLANDS. Operators Yama/JA1SGU and Kazu/JJ1KZI will be active
as KH0T and KH0V from Saipan Island, October 5-8th. They will operate on
80-10 meters (WARC bands included) mainly on CW. QSL via home callsigns
direct.

KH5, PALMYRA. Mike, KH6ND, continues to be active as KH6ND/KH5. He was
heard over the last several days mostly on 160/80/40 meters CW between
1030 and 1200z.

QSL INFO AND NEWS.....
9M0F is now QRT as of September 16th at 2220z. QSL via JA1HGY:
Nao Mashita, 8-2-4 Akasaka, Minato, Tokyo 107-0052, JAPAN

Jose, CT1EEB, reports that all 4W6EB, CU3/CT1EEB, CU5/CT1EEB, CU7/
CT1EEB QSL cards received up to September 8th are in the mail. As of
to date, the backlog of QSLs to answer is ZERO. Lina, CT1YRV, will
try to answer on a daily bases from now on. (You have to thank her
not Jose for the QSLing).

NOT THE QSL MANAGER. Denny, GW3CDP, informs OPDX that he has been
receiving QSL cards (mainly stateside) for EK4JJ and EK4GK, and states
he "is NOT and/or will NOT be QSL Manager for EK4JJ and EK4GK...again
or in the future..." Denny is however, QSL Manager, for EY8XX (via
E-mail) and EW6WR direct.

Tex, 9M2TO, reports that all QSLs sent to JA0DMV (received before
August 22, 2000) and to 9M2TO (received before August 31, 2000)
have now been replied too.

Antonello, IK2DUW, informs OPDX that QSL cards for R0L operation to Putyatin Island (AS-066) will be ready by the end of September. Logs are available on the Web page: http://www.qsl.net/r0l QSL via IK2DUW: Antonello Passarella, P.O.Box 22, 20051 Limbiate, Milano, Italy.

Eugene, W2FXA, informs OPDX that he is now the QSL Manager for Rep, YB0RP, and has the logs in hand up to September 2, 2000. Send a SASE or IRC or Green Stamp for immediate reply to: Eugene Nadolny, 21 Hidden Valley Dr., Elma, NY 14059.

R8, RUSSIA. According to "The 59(9) DX Report", Serge, RA0JJ, will be signing R8V/RA0JJ from September 18-22nd, from Agino-Buryatskiy Nationalny Autonomny Okrug, on CW and SSB. QSL to P.O. Box 1, Blagoveschensk 675000, RUSSIA.

SAD NOTE (More). It has now been reported that there were actually two amateur radio operators killed in West Timor, Indonesia. We reported last week that Pero Simundza, 9A4SP, was one of the three killed and now we are sad to report that Carlos Luis Caceres, KD4SYB, (age 33) was the second person killed. OPDX would like to send out our condolences to his family and friends. OPDX InterNet Subscribes will receive an additional bulletin which contains a message from Carlos's father about his son. Meanwhile, please visit and sign the Memorial Guestbooks for both families at: http://www.qsl.net/kd4syb http://www.qsl.net/9a4sp

SPECIAL EVENT. Look for special event station, K3G, to be active from the U.S. Coast Guard Auxiliary Station in Philadelphia, Pa., from 1400z to 0000z October 21, 2000. The station is commemorating the Sixty First Anniversary of the U.S. Coast Guard Auxiliary. Suggested frequncies are: 7232, 14332, 21332, and 28332 kHz. A "Special Commemorative QSL" will be available via NM3S at: Dan Amoroso, 196 Dam View Drive, Media, Pa. 19063. For more Information, contact Dan at: NM3S@prodigy.net

SPECIAL EVENT. The Greater Norwalk Amateur Radio Club (GNARC) will be operating a special event station to commemorate the visit of the traveling Viet Nam Wall Memorial to Norwalk, Connecticut. The Club will be using the special event call K1V beginning October 12th, 1600z until October 16th at 0400z. Operation will be in the lower 25 kHz of the General phone portions of 80, 40, 20, 15 and 10 meters. For specific frequencies, check for posts to DX clusters and at their Web page (http://www.gnarc.org) during the dates of the event. QSL to: K1V c/o GNARC, 324 Main Ave Box 115, Norwalk, CT 06851, USA. A 8.5x11 color certificate as well as a QSL card will be available. For the certificate, please include a 9x12 SASE with sufficient postage. For the QSL card ONLY, a business sized SASE. A donation of 1 USD to defray printing would be appreciated.

T8, PALAU. Shun, JH7IMX, will be active as T88SW between September 21-24th. He will participate in the CQ WW RTTY Contest. His activity before the contest will be CW, SSB and perphaps also PSK31 on 80-10 meters including the WARC bands. QSL via JH7IMX.

T8, PALAU. Look for Kazuo/JA3ART and Katsuji/JR3KFX to be on a DX-vacation from October 6-9th, signing as T88JJ and T88FX, respectively. Activity will be on 80-10 meters and also 6 meters. Operations will be on CW, SSB, RTTY and PSK31. They will concentrate on WARC bands and RTTY. QSL via the JARL Bureau or direct to their homecall below:
Kazuo Ebihara, JA3ART, P.O.Box 62, Sakyo, Kyoto, 606-8691 JAPAN
Katsuji Takagi, JR3KFX, 653-16 Yodo-Namazucho, Kyoto, 613-0914 JAPAN

V2, ANTIGUA AND BARBUDA. Team Antigua will once again activate V26B in this year's CQWW SSB Contest on October 28-29th. They plan to enter the the contest as a Multioperator/Multi-transmitter category. Team members will make special attempts to be active on RTTY, PSK31, 160 meters and the WARC Bands a few days before and after the contest. There is also a possibility of some 6 meter and Satellite operations with conditions permitting. Operators will make their presence felt on all bands starting on or about October 25th until about November 1st. The Members of Team Antigua and their callsigns are:

V26A Dale, N3BNA QSL via WB3DNA V26O Bob, N5NJ QSL via N5NJ
V26AK Tony, N2TK QSL via N2TK V26OC Brian, N3OC QSL via N3OC
V26AU Carsten, DL6LAU QSL via DL6LAU V26SZ Sharon, N5CK QSL via N5CK
V26B Sam, WT3Q QSL via WT3Q V26TZ Tom, ZP5AZL QSL via W3HNK
V26EW Ed, N2ED QSL via N2ED V26U Bill, W2UDT QSL via W2UDT
V26J Jay, WX0B QSL via W3LT V26YR John, W2YR QSL via W2YR

For a complete station descriptions, complete with photographs and rate charts of "The Team Antigua, V26B, Superstation", please visit their Web page at: http://www.frc-contest.org
OPDX InterNet Subscribers will receive the complete press release as an additional bulletin.

XU, CAMBODIA (Update/Change from OPDX.474). Toni, EA5RM, informs OPDX that the dates for the XU7ABD operation by him and Pedro, EA7DBO, have been changed. Due to flights connection problems, the dates for this DXpedition have delayed the team's arrival in Phnom Pehn until the morning of October 5th. The operation will finish on the morning of October 13th.

You're right, Bob. You're the perfect product of the hollywood-induced civil rights movement, right down to the utter acceptance of the images hollywood offered (and is offering). Hollywood shows you George Wallace, and he becomes a racist (along with his supporters in that state). Hollywood shows you Bull Conner, and he becomes a racist (along with his supporters). Hollywood doesn't show you the racism within the black community, so blacks are not racist (they're out to right present and past discrimination).

Let me ask you a few questions. Do you really believe that blacks are seeking equality in this country? Do you really believe that the black movement in this country is not out to promote its own self-interest and self-gain? Do you really believe that affirmative action, racial quotas, black organizations, black television, or other inequalities favoring blacks, will end once blacks do gain equality in this country (or even later when they become the majority)?

Let me ask you another question? How long must whites suffer before you will feel they have been punished enough - before you feel they have paid for those "manifest discriminations?" I was a small child when blacks were forced to drink out of separate water fountains in the 50's, yet I've been forced to live with affirmative action and quotas my entire life. Will my children have to live with it their whole lives? What about their children?

In other words, when does it stop, Bob? When do whites get to be treated as equals in this country?

Yep, I see the friendly attitudes of CB'ers every night on the CB frequencies - drunken arguments, threats, foul language, rude comments to any female that dares speak up, my-dick-is-bigger-than-your-dick linear fights, childish noise toys, and other such stuff. Give me the four guys, and their list of rules, any day of the week. I would be glad to join.

And, so would my wife. She hates CB'ers so much, she would rather walk down the street in the middle of the night to a store when her car

breaks down instead of calling for help on the CB. Once that happened, and I really realised the depth of her adversion towards CB'ers, the CB equipment was removed from our lives and it will never return.

And no amount of barbequed ribs and beer is going to change that.

In other words he could have gotten a better break had his name been Herb Wen Schoenchin and he had been stealing nuclear secrets instead of telephone services. Ah so!

Any law enforcement officer can make an arrest for violations of
federal laws and regulations (assuming the regulation allows for arrest
of violators). It is then up to the federal government to seek a
conviction of that person in the courts.

In the past, the federal government often failed to seek convictions,
so the house bill was an attempt to give direct enforcement of federal
regulations concerning radio, without federal involvement, to local law
enforcement. That bill was defeated.

The key between the two is the level of federal involvement. Under
the present system, there is a requirement for federal involvement.
Under the failed house bill, there would have been no need for federal involvement.

875. PROPOSAL: tougher written exams

Newsgroup: rec.radio.amateur.misc
Date: 2000-09-17 00:43:02 UTC
From: jason_hsu@my-deja.com
Message-ID: <8q142ids1@nnrp1.deja.com>
Source record: 103215
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

I have an idea on a good license testing compromise. I challenge anyone to shoot it down.

1. Eliminate the Morse Code testing requirements.
2. Lengthen the written exams by a factor of 2 to 3. The Amateur Extra exam, for example, would be 100 to 150 questions instead of 50.
3. Add to the written exams even more material on RF safety as well as questions on the various digital modes. This would make the exams much more up-to-date.
4. Add to the written exams questions on the virtues of Morse Code (simpler equipment, cuts through noise more effectively, etc.). This will ensure that all hams are aware of the merits of Morse Code. A substantial percentage of hams will likely decide at some point to learn Morse Code as a result of this.
5. A requirement that all hams retake and pass the license exam of their own license class in order to renew. Novice licensees must upgrade to Technician or lose their license. Advanced licensees have the option of upgrading to Extra or retaking the General exam and being demoted to General. This will ensure that everyone is subject to the beefed-up written exams described above and keeps up-to-date on the technology and issues.

Depending on what course you followed:

Did you contact him ahead of time (prior to bidding, or at least prior to
close of the bidding) to confirm the description.
If the radio was not as represented you can contact e-bay. They do have
recourse for things misrepresented, but they also expect you to have done
some checking ahead of time as well.

jason_hsu@my-deja.com wrote:
: I have an idea on a good license testing compromise. I challenge
: anyone to shoot it down.

Send it to the FCC and let -them- shoot it down!

: 1. Eliminate the Morse Code testing requirements.

Wouldn't that violate S25.5?

: 2. Lengthen the written exams by a factor of 2 to 3. The Amateur
: Extra exam, for example, would be 100 to 150 questions instead of 50.

Please try to keep in mind that the FCC has been quite satisfied with the
qualification tests that we have been using for decades.

: 3. Add to the written exams even more material on RF safety as well as
: questions on the various digital modes. This would make the exams much
: more up-to-date.

The exams are periodically updated right now. You could volunteer to be
the one to write the 1000 to 1500 questions for the Extra pool alone.

: 4. Add to the written exams questions on the virtues of Morse Code
: (simpler equipment, cuts through noise more effectively, etc.).

Is there some requirement that hams use "simpler equipment"?

"cuts through noise.....":
Have you tried MFSK16?

; This will ensure that all hams are aware of the merits of Morse Code.

What about all the -other- modes? Why do you single out Morse code for
special treatment? This has been the problem for decades. I thought you
wanted to bring the tests up to date (Morse code is not newest mode hams
are using).

; A substantial percentage of hams will likely decide at some point to
: learn Morse Code as a result of this.

Could you please present the data that lead you to this conclusion?

: 5. A requirement that all hams retake and pass the license exam of
: their own license class in order to renew.

In what way would this simplify and streamline the rules (which is what
the FCC wants to do)?

: Novice licensees must upgrade to Technician or lose their license.

Novice license numbers have been steadly falling for years. Why are you picking on them? Taking privileges away from people is NOT what the FCC wants to do -again-.

; Advanced licensees have
: the option of upgrading to Extra or retaking the General exam and being
: demoted to General.

Why are you picking on THEM?

: This will ensure that everyone is subject to the
: beefed-up written exams described above and keeps up-to-date on the
: technology and issues.

You do realize that amateur tests are -entry- qualification tests for each license class? There is no requirement that hams keep "up-to-date-....". Only that they obey the rules in place. Now if you can get the FCC to add that requirement to Part 97........

Great trool. I'd sugest you write all this up and send it to the FCC.

stewartx@sccoast.net (Dwight Stewart)
Bob Sherin wrote:
[snip] To my mind, the objective
function is not to punish the majority
but rather to contribute to parity of
minorities.

Even if that contribution of parity punishes the majority for an
"imbalance" they did not create? Nonsense!

I suspect the real goal is not to achieve parity, but to punish the
majority for past wrongs, even if those wrongs didn't apply to said
minority. In other words, white people are bad (look at what they did to
the indians, or whomever, or whatever), so lets take whatever we can
away from them (and give it to everybody, or anybody, else).

And, why are your contributions to "parity" so limited to one group?
Whites have lost more than 50 percent of their purchasing power over the
last thirty years (it now takes two workers in a family to earn as much
as one worker did thirty years ago), yet you don't see that same loss of
spending power in other groups. For example, Bill Gates, and his
friends, have certainly not lost 50 percent of their spending power over
the years.

Dwight Stewart   (W5NET)
http://www.qsl.net/w5net

I hear you Dwight with some merit. To assume no deference to other
groups, because the subject of this exchange is Affirmative Action in
ham radio, is fallacious. You'll likely be surprised to learn I'm not
African American.

If readers had unlimited time, then we could post encyclopedias. But
they don't, so we try to focus our writing responsively to the NG. In
my local community, I'm VP of our voluntary HOA, Caucasian and
non-Hispanic, I am involved in many different causes. All are
approached as non-prejudicially as I'm capable. Central is absence of
recimination.

Chapter 1, the Parallel

September 16, 2000
from The New York Times
ABROAD AT HOME
It Did Happen Here
By ANTHONY LEWIS

OSTON - In excoriating officials for their treatment of Wen Ho Lee, Federal District Judge James A. Parker said one question remained unanswered: "What was the government's motive?" There is an answer to that question, a chilling one. It is: politics.

In the winter of 1999, Republicans found what they thought was a promising theme. The Clinton administration, they said, is soft on Chinese nuclear espionage. It was an updated version of the charge that Richard Nixon and others had used so devastatingly, that Democrats were soft on Communism.

Dan Quayle charged the administration with "appeasement" of China in "espionage involving our most critical secrets." Republicans in Congress attacked the president's national security adviser, Sandy Berger, for supposed laxity in dealing with Chinese spying. Conservative columnists joined the chorus.

A House committee under Representative Christopher Cox, Republican of California, issued a 900-page report saying that China had been stealing our nuclear weapons secrets. Experts pointed out that the report was long on conjecture and short on evidence. But the committee's Democrats, evidently panicked, joined it without dissent.

The Clinton administration moved quickly to meet the Republican attack. Among other things Bill Richardson, the secretary of energy, appointed a "security czar."
Then a villain was found ☐ someone to blame: Wen Ho Lee, a scientist at the Los Alamos National Laboratory. In March 1999 he was fired. In December the U.S. Attorney's office in Albuquerque, N.M., had a grand jury indict him on 59 counts of mishandling nuclear secrets ☐ with a potential penalty of life in prison.

In the months after that indictment Mr. Lee was painted in the darkest tones. He was said to have compromised the "crown jewels" of U.S. nuclear weapons. Government investigators compared him to Julius and Ethel Rosenberg, who were convicted of giving atomic secrets to the Soviet Union and executed in 1953.

Prosecutors gave Judge Parker, as he told Mr. Lee the other day, "information that was so extreme it convinced me that releasing you, even under the most stringent of conditions, would be a danger to the safety of this nation."

At the prosecutors' urging, the judge denied bail. Mr. Lee was held in what Judge Parker called "demeaning, unnecessarily punitive conditions" ☐ in solitary confinement, allowed to exercise only an hour a day with his legs shackled, the lights kept on in his cell 24 hours a day.

In recent months the hyperbolic picture of Mr. Lee and his supposed offenses faded away. Robert Messemer, an F.B.I. agent who testified that in two incidents Mr. Lee had been deceptive, admitted that his account of those two incidents was false. It was "an honest mistake," he said.

The great secrets to which Mr. Lee had access ☐ and of which he had wrongly made computer tapes ☐ turned out to be not so secret. Many had been available in thousands of sources.

But no one in the government backed off. Prosecutors continued to insist that Mr. Lee was a terrible danger to the nation.
It was Judge Parker who pierced the stubborn denial of reality. When he made clear that he had had enough, prosecutors signed a plea agreement that let Mr. Lee go with the 278 days he had served in prison. It amounted, Judge Parker said, to a concession "that it was not necessary to confine you last December or at any time before your trial."

I do not think that Secretary Richardson or Attorney General Janet Reno decided overtly to use the Lee case for political purposes. I think that, feeling the political pressure, they allowed their judgment to be shockingly distorted.

For the Justice Department especially to go on and on with a case so weak is profoundly disturbing. To let the terrible weapon of criminal prosecution be used in a politically convenient way is a hallmark of tyranny.

The lead prosecutor in the case, George Stamboulidis, unregenerate after Mr. Lee's release, suggested that Judge Parker did not understand the national security issues. To the contrary, this country's security rests in good part on having judges with the character and courage, like Judge Parker, to do their duty despite prosecutorial alarms and excursions.
A. Lewis, N.Y. Times

Chapter 2, KV4FZ: When the Feds Fanned Out by Bob Sherin, W4ASX

It was before Hurricane Andrew, 1992. I had been invited to St. Croix, all expenses paid. From the airport, we twisted some twenty minutes through the old island, turning up a dirt road where we bounced slowly to the top of a hill and stopped. Herb, Monika Shoenbohm and I got out of the car.

The scene was breath-taking: standing atop a one hundred foot cliff, the shimmering Caribbean, turquoise in color, danced gently as far as the eye could see, etched by a receding sun that highlighted St. Croix's tropical allure. Close by was a seventy foot tower crowned by monobanders, an unmistakable clue that a zealous ham lived nearby. This had to be the best ham location in the world!

Next day, a world away, we entered the island's, old federal Courthouse. (A new one has since been built.) I was told to sit outside the courtroom in an old veranda appointed with rickety chairs. During my few days wait there, characterized by dodging real time pigeon droppings in soaring temperatures, I would see a panorama of intrigue unfolding.

Like musical chairs, witnesses came and went. Except for some amiable FCC guys, people showed their animus against Herb as they buzzed secretively. An aura of importance underscored this scene, one I could never have imagined if I weren't seeing it with my own eyes.

The grapevine soon told that I was there to assist Herb, and the human dynamic changed from a modicum of warmth to ice cold. Some would not sit next to me or within ear shot. Education about federal prosecution was just beginning.

At lunchtime the Court took recess. Herb and Monika invited me for lunch a few blocks away. As we strolled, taking care to step up and down the curb stones of zaney sizes, we were followed by several of the trial people. We arrived at the restaurant, quaintly decorated with smart woodwork. Sipping my drink, I surveyed the lunch crowd with the natural curiosity of a tourist. That's when I noticed the same people from the trial sitting nearby.
Herb pointed out the prosecutor. Others remained nameless during the entire ordeal, but I would see them everywhere. And whenever I used the telephone back at Herb's house, I heard suspicious clicks.
Some one million dollars was poured into this prosecution. The Secret Service and FBI, which had interviewed dozens of witnesses on the island and in the States, were there in force. It didn't take a genius to determine, they were scrutinizing our every move.

Herb, strong minded, outspoken and, at times, using very bad judgement, had made many enemies. As one of the Republican party faithful, he had exposed corruption and wrongdoing, impacting the careers of many, including the Governor. He had also rankled many hams.

I first met Herb in the mid-eighties at Miami International Airport. Seeking something meaningful in my ham life, I was there to interview him about the telephone, toll, bypass feud polarizing the ham community. Herb had taken a stand against the Intercon Net for allegedly misusing amateur phone patching. He often pointed out that the Jim Jones' group had used Intercon for some of their business. Herb was just the kind of subject I needed: hot news for information bulletins and print journalism.

Only the future would tell how hot the story would become. As Mr. Law and Order, Herb had raised the bar of justice for himself and created a coterie out to get him.

When Caribbean Long Lines Services started operating on St. Croix, Herb mailed a one hundred dollar check as enrollment fee. That check, which the prosecution tried to cover up, was never cashed. Meanwhile, the irrepressible Herb was fascinated by new telephone technology. His mind danced with protocols, frequencies, coverage, and entry codes.

He began hacking to learn how secure the system was, astonished to find that one out of three numbers went through. This new company, Calls, had virtually no security. Wrapped up with his discovery, he discussed it openly, including on ham radio.

That's when his enemies joined forces. Among one another they cited the thousands of letters written to the FCC and others as evidence that Herb must be doing something wrong that needed to be stopped. His open talk about Calls' security was ideal corroboration. At the same time, new legislation was being enacted to thwart credit card crime and funded to go after exemplary cases. Herb was in the crosshairs: The million dollars was spent on building this one case against him.

But in order to return a conviction, the government had to prove more than $1000 telephone fraud. No such crime, in fact, existed, so they fabricated a printout with phoney charges that rose slightly above the minimum. The fact, the alleged recipients didn't know Herb and hadn't talked with him didn't matter.

The prosecution, with the cooperation of the investigators, invented real people out of thin air who in reality denied taking with Herb. Their expert testified to the authenticity of the list, and the Secret Service testified that they had interviewed every recipient of every call.

Exculpatory evidence hidden, here's how the trial opened: Pointing his finger at Herb, the prosecutor told the jury that here was a kingpin of crime, appearing like an open and shut case. To bolster guilty verdicts, as Herb was forced to take the stand, computer printouts were piled high around him.

Only after the trial was Herb able to research the calls listed. One was a Franklin Gell of Miami,Florida. I looked up Mr. Gell in his Little Havana home. Warmly welcoming me, he offered me a cup of Cuban coffee. We sat at the kitchen table where I produced the printout. Yes, we were looking at his Miami telephone number, but he said he didn't know any Herb Schoenbohm.
I asked him if he could document his telephone calls. Returning from a closet with an old leather binder, he searched his records. Although he hadn't ever talked with Herb, he was in contact at the time with a colleague on St. Thomas.

Here was a bold faced deception involving many on the prosecutorial team: random calls having nothing to do with him had been arbitrarily

connected to Herb. The Judge reversed two counts of his conviction. One count remains to the time of this writing: "possession of a counterfeit access device with intent to defraud."

What is the device? Numbers in Herb's head. Not one number or any precise number but some number. And with the printout falling from grace, any semblance of a number has vanished from whence it came: thin air. (The FCC, in its administrative action, ruled that the vaunted Miller tape proved no illegality.)

Talk about Constitutional rights denied, prejudice, hatred, punishment for political views, recrimination for other behaviors, justice has been turned on its head. The pending felony conviction is a red herring. Those of us who see a certain arrogance in Herb need also understand what it is to fight political persecution. How contrite could you be if you were similarly beleaguered?

The FCC misused its power when it put KV4FZ under oath and expected him to be forthright. As long as his judicial process was pending, Herb Schoenbohm had inalienable rights protecting him against self incrimination and to due process, which were out of concert with even a de minimus confession. If justice be done, the FCC will lose its discretion, grounded in his felony conviction, to take his license.

Well, Mike, if these "older farts," and "ham geeks," actually make the hobby look so bad (as you say), what do you suggest we do about it?

Should we have some form of age limit in ham radio? For example, we could pass a rule that nobody over the age of twenty-four is allowed? That will keep all the old people out, and insure the hobby keeps a youthful image.

Or what about a geek test? For example, we could exclude anyone who is not rated as "cool" by a panel of 12 judges.

And, in response to your comment about 2 meters, perhaps the license exams should be modified to check whether a person has used anything other than 2 meters?

You know, it's amazing how younger people claim to be so tolerant, but actually turn out to be so intolerant in their daily lives.

I'd do the AM radio thing no matter where I moved. You don't need Distribution Lines to have electrical noise, just have a neighbor with a swimming pool or (don't ask me why)... but a funeral home across the street (at least i think they were the culprit). the Electrical noise was so bad that I had to get cabel TV to watch anything below channel 7. (then I moved next to the pool!!!) But that's OK, I installed a Sat Dish and it doesn't mess up the radio plus...it's an indoor pool and we have a key!

Low reserve. Bidding started at $90.

eBay auction of 2 Meter All Mode rig (covers 144-148 Mhz). Good to very good condx. MC-46 Tone/VFO mic included. It's great for autopatch, and you can QSY right from the mic.

This is a mobile unit, and will, of course, require a power supply for base operation.

Thanks & 73,

Chuck

Pirates, geeks, punks, anarchists, workers, people who
are discriminated against on racial, gender or
sexuality, and anti-globalization activists are coming together to
confront the NAB in a way they will never forget...

September 20-24, 2000
San Francisco, CA

For full details:
http://www.mediademocracynow.org/

For full coverage:
http://sf.indymedia.org/

We can thank the NAB and the media giants that represents

* Putting out the trash called commercial radio and TV.

* Stereotyping youth, people of color, and working class people.

* Censoring and misrepresenting the issues that we care about--from
homelessness and immigrant rights to the environment and labor.

* Pushing for legislation like the Telecommunications Act of 1996, which
legalized media monopolies, creating The Gap and Starbucks of the
airwaves.

* Engineering the giveaway of billions of public dollars by handing over
the digital TV spectrum to the corporate media.

* Fighting tooth-and-nail against grassroots media efforts like
low-power radio that would bring hundreds of new voices and perspectives
to the airwaves.

Bring your microradio transmitters, your dancing shoes, and your
militant nonviolent attitude.

The threat to America comes not from drug runners nor from spies.

Our enemies are those that weaken our defenses by giving away
our military and science secrets and weapons plans.

Our enemies are those that give aid and comfort to our enemies.

Our enemies are those who weaken our society through divisive
politics and law.

Our enemies are those who take away our manufacturing and
agricultural base.

Our enemies are those that weaken our military by placing within
it, the unintelligent the physically and psychologically weak,
and those that hate our society.

Our enemies are those that weaken our children by forcing upon
them narcotics and unfit teachings.

Our enemies are those that try to disarm us.

Our enemies are those who oppress the citizenry.

Our enemies are those who, through acts and speech, disavow
our Constitution and seek to destroy it.

Our enemies are well known and within our ranks.

Not to mention any AM broadcasters within a half-mile of the house if 1000 kW
or less. Anything stronger is a problem for 1.8-2.0 and other HF ham bands.
I lived near an AM transmitter in Michigan and it even caused problems on the
CB band, I was only 300 yards away from the transmitter though.

Bob, I never said the images were fiction. I was comparing how whites have been painted as racist by the press with images like those of Bull Connor and George Wallace, but that same press does not make the same effort to shows images of racism against whites within the black community.

Look at the shows about racism on television today. They always start out with images of whites mistreating blacks (police beatings, scenes from the 50's, etc), and then has a black person on there talking about how bad racism is (in other words, whites are always racist and blacks are always the victim of racism).

Don't believe me? Name the last show you saw that showed a white person as the victim of black racism? Whites are killed every single day in this country by blacks (at a rate far greater than whites killing blacks), but the press cannot find a single image of black racism against whites to show on television.

> Still, that doesn't mitigate against
> reaching for parity. [snip]

Who's concept of parity? And, for that matter, why should there be parity at all? In other words, why should money, jobs, and so forth, be taken from me to give parity to a group of people who just landed in the US off the boat last week? Why do I own those people at thing? And, if you're talking about parity, why don't you take some of the money from the rich who land on US shores and give some of it to poor whites. In other words, why is it that money, jobs, and so forth, must flow from whites to these people, but nothing flows back to whites from those with more wealth than theirs.

> Still, I wouldn't have it any other

Progress towards what - the destruction of the white race in this country perhaps? And what Civil War struggle? As I have said before, most of the blacks in this country today were not here during the civil war (and neither were any of their relatives). Most blacks in this country today entered this country long after the civil war ended. In fact, a huge portion of them entered this country long after the incidents in the 50's and 60's. Again, why do my family and I own these people anything?

>Extra exam, for example, would be 100 to 150 questions instead of 50.

I see no reason to lengthen the tech license, but would
not be opposed to a longer General or Extra.
Perhaps the following might make more sense:

Technician - No Change
General - 50% increase
Extra - 100% increase

>3. Add to the written exams even more material on RF safety as well as
>questions on the various digital modes. This would make the exams much
>more up-to-date.

Agree.

>4. Add to the written exams questions on the virtues of Morse Code
>(simpler equipment, cuts through noise more effectively, etc.). This
>will ensure that all hams are aware of the merits of Morse Code. A
>substantial percentage of hams will likely decide at some point to
>learn Morse Code as a result of this.

The "virtues" of morse code are not universally
agreed to. Digital modes can and do offer
even greater "virtues." I think there should be
morse related questions, I just wouldn't phrase
them in such a "viture oriented" approach.

>5. A requirement that all hams retake and pass the license exam of
>their own license class in order to renew. Novice licensees must
>upgrade to Technician or lose their license. Advanced licensees have
>the option of upgrading to Extra or retaking the General exam and being
>demoted to General. This will ensure that everyone is subject to the
>beefed-up written exams described above and keeps up-to-date on the
>technology and issues.

Nope. If the state sees fit not to retest me on a driver's license, I see no reason to be retested on ham radio knowledge. I graduated from college 30+ years ago and no one questions my abilities, etc. If people don't need to be retested for their careers, then we don't need it for ham radio. Retesting WOULD absolutely kill ham radio within a decade or less.

Cheers,
Bill K2UNK

It is? Based on what rational?

>With type accepted equipment, and type accepted antennas, installed in
>an FCC approved way to prevent radiation exposure, we are rapidly
>approaching the day where a ham station will consist solely of
>appliances fully regulated by the government.

There is NO such thing as type accepted ham gear now.
That being the casse, how can we be "rapidly approaching"
what you predict?

>When that happens, the bureaucrats in Washington will see little
>difference among CB, the FRS, or amateur radio and will be tempted to
>combine them into one service for administrative efficiency.

Speculation only. Good for a session
of beer drinking discussion, but not based
on anything that has happened at all.
Indeed, the FCC rather than "merging"
services has created yet another new public
service (MURS) which differes from both
FRS and CB as to frequencies, equipment
and purpose.

>I happen to think that day is close upon us. The first step will be to
>declare CB operators to be a special class of amateur licensees. Mark
>my words.

Not going to happen.
The CB vs Ham differences are far to
extensive and complex to just make CBers
hams of a different license class. Infact,
CBers have NO license as it is.

Mark my words.

Cheers,
Bill K2UNK

Scanners are NOT illegal anywhere in the USA EXCEPT
for a handful of states that prohibit the use of scanners
in an automobile.

>The cops are having big problems with drug runners using escort
>vehicles with scanners and out of band CBs or VHF handhelds to
>avoid the cops. The cops are afraid that the drug runners might get
>ham licenses to avoid arrest for possession of illegal scanners.

Two points:
1. If the cops truly felt threatened then they'd be
asking their state legislatures to enact anti-scanner
laws everywhere. They are not doing that.
2. There are NO illegal scanners. Anyone can own
a scanner. The issue of use/possession of a scanner
ONLY comes into play if the person using/possessing
the scanner is in a motor vehicle in one of the few
states that prohibit using a scanner in an auto.
3. Only one state actually prohibits using a scanner
anywhere else but in your home (Indiana?).

>There is also the problem of foreign nationals using ham equipment
>to communicate for purposes of spying.

If that has any concern, it has been the case
for 75 or more years.

>If anything the cops want stricter laws, just as with guns. And code
>isn't the answer as foreign nationals will be more likely to pass a
>code test than US citizens. If anything the cops would like to see
>ham radio, scanners, and CB radio banned. If the public can not
>communicate then they can not rebel.

True, but no laws of that nature are being proposed.

>The UK is having the same types of laws against scanners (it is
>unlawful to listen to anything that you are not licensed to transmit
>except for amateur radio and broadcast), guns, and restrictions
>on Internet communications (one must post one's true ID, MI5 must
>have a copy of any encryption keys, and MI5 can read your email).
>And the Bobbies do pull you over to check for illegal radios, guns

>and whether you have ag diesel fuel in your tank.

This, howver, is NOT he UK and there is no
imminent or proposed radio restrictions of the type
you suggest above.

Hi Bret,

It depends on what you like to do,and how those lines are installed
and maintained. If you like low band DXing, I wouldn't chance it.
I've had problems from lines a couple miles away.

If you only work 40 meters and up, you are probably OK.

Just remember if you have a problem, it can be next to impossible to
get it resolved.

I know that on a Med cruise in 1983 we had a CW net operating during a communications
emergency. Yes, we had to have at least one CW operator on duty at all times in the
shack. 1983 is a long way from what is normally called post-Vietnam era.

903. WANTED: 2m/70cm antenna suggestions

Newsgroup: rec.radio.amateur.misc
Date: 2000-09-18 00:00:00 UTC
From: jason_hsu@my-deja.com
Message-ID: <8q5gspqav1@nnrp1.deja.com>
Source record: 103161
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.antenna

My ground floor apartment is VERY RF-unfriendly. Even with my trusty ADI/Premier RD-98 antenna (a long, flexible 2m/70cm antenna for HTs), I need to use the roof of my car parked outside as a ground plane in order to transmit into the local repeater (which is a good 15 miles away).

Should I buy the $10 telescoping antenna that Radio Shack sells for 2m/70cm? It is quite cheap, and it should perform better than the flexible antenna when fully extended. A telescoping antenna is fragile, but I can still use the flexible antennna away from home.

Would it be possible for me to use a mobile antenna with my HT? (If so, I realize I would probably need to buy special adapters as well.)

Are there other options? A dipole? A wire? A small base station 2m/70cm antenna?

Should I select a 6m/2m/70cm antenna? In a few years, I might buy an HT that gets 6m or an HF rig that gets 6m/2m/70cm (like the Icom 706MKIIG or Yaesu FT 847).

I keep hearing about foul language, fights, and even racial slurs on 80m. I find this difficult to believe. So far, my experience has been limited to 2m/70cm FM, and I don't recall EVER hearing yahoos here. I hope the 80m horror stories are just an urban legend.

But if it really is that band on 80m:
What attracts the yahoos to 80m? Don't they realize that they don't belong? Can't they at least keep the rudeness off the air? What goes on in their minds? Did they see the movie "Titanic" and root for Rose's jerk of a fiancee? Did they see the "Back to the Future" trilogy and root for Biff and Mad Dog Tanner? Have things improved now that the FCC is cracking down?

COM-SER LABS Model BR-1000A Two-way Radio Service Monitor.
AM, FM, CW modes up to 1 GHZ,
with CTCSS encode and decode,
sinad meter,
watt meter,
scope and trouble tracer.
Watt meter reads up to 100 watts.
You can test and align BUSINESS RADIOS, AIRCRAFT,
CB, AMATEUR, POLICE, FIRE, EMS and many others.
This unit WORKS GREAT, powers up, calibrates,
generates and receives ok when tested with an IFR 1200S monitor,
but is sold AS IS.

Just bought on ebay, but I have run into some problems and MUST sell.

Make an offer!

Ok Ok....lets get something straight here folks. Bull Conner, George
Wallace and their supporters were following the LAWS of the STATE of
ALABAMA....AT THAT TIME. Bull Conner and George Wallace believed they
were doing what their constituency wanted.

As for the UAB incident. Just another twisted version of yankee
television. Gov. Wallace was standing up for STATES RIGHTS. Same
basic issue that started that conflict in 1861.

Now continue with your debate.

300,000 / 3500 = 85.714
300,000 / 3750 = 80.000

300,000 / 4000 = 75.000

Normal Amateur speak referes to the phone portion of the 3.5 to 4.0 mhz
band as 75 meters. The CW and Digital portion is called 80 meters.

Not in the least.

At "worst", the manufacvturer must (self) certify that radio
noise leakage fron receiver local oscillators or digital data
circuitry meets FCC standards.

That's all.

As an owner of a diesel dodge pickup, let me answer this question right
away, YES, and the State police in Louisiana and Alabama will sample
your tank (been there and sampled) and if they find RED, you will be
paying GREEN to both the IRS and State Gov't. Had a buddy in AL who
decided to run the cheap stuff and was caught, his fine was $370.00 ($10
per gallon on his tank capacity) as well as a fine from the IRS on
Federal Fuel Taxes.

I'm probably the only person in here that will admit it, but I am a ham and I agree with what you are saying. Every hamfest I go to has these ham geeks that have probably never operated anything other than 2 Meters. I am 25 and have been a ham for 8 years now and I can say those people make the hobby look bad. Every hobby has it major leaguers though, and I have had a lot of fun with ham operating, so please give it another shot. I agree though, there are a lot of geeks and old farts in this hobby and not a lot of younger folks like myself, but it's still a pretty neat hobby. I'd be damned if I would sit in my shack when it's sunny and 80 degrees outside either though. Have a good one!

To support your claim, see HB 2346 which just cleared the House
Commerce Comitteee as a piece of unfinished business, does it hold
an ominous warning for CB in the US?

The FCC has prempated Scanner Laws for Licensed Amateurs, so a Ham
can't be cited but what about the non-ham?

> The cops are having big problems with drug runners using escort
> vehicles with scanners and out of band CBs or VHF handhelds to
> avoid the cops. The cops are afraid that the drug runners might get
> ham licenses to avoid arrest for possession of illegal scanners.

If the "drug runners" get ham licenses, it would create an database of
information for LEOa to track. Illegal use of short range handhelds
with
rubber duckys would be more likely. Most LEOs are not that radio savey,
so
every radio is a CB to them and every handheld is a scanner?
>
> There is also the problem of foreign nationals using ham equipment
> to communicate for purposes of spying.
>
With a little imagination it is possible on several scales:

1. Keeping local (in country) networks free of phone/hardline tracing.
(Yes it could be DFed, but not with some effort if the transmitters are
moving around.)

2. Interception of transmissions:
A. With our movable/RV community, it is very easy to move around to
monitor many
sites, venues or locations, all with a perfect cover of a camping trip.
Sophisticated
Radio equipment is able to be acquired/brought in the US under the cover
of Amateur Radio.

B. Amateur Radio Equipment, especially digital could mask sinister
deeds without
arousing suspecion.

> If anything the cops want stricter laws, just as with guns. And code

19th Annual ARRL/TAPR Digital Communications Conference
Orlando, FL - September 22-24, 2000

** Final Update 9/18/2000 **

Counting down the final days until the 19th Annual ARRL/TAPR Digital Communications Conference this weekend in Orlando, Florida. For detailed
information about the conference, please visit the official DCC web page at
http:www.tapr.org/dcc.

Registration for the conference will be taken at the door. Friday registration is for an entire afternoon APRS activities, demonstrations, and
presentations. Saturday registration includes conference proceedings, lunch, and a full day of presentations. Saturday night includes Banquet,
dinner speaker, and prize drawing. Sunday registration is for the PICmicro
Design seminar.

DCC Social:
Please join us Friday evening at 7:00 PM for a social get together time.
The social is generously hosted by the Packet Radio Users Group of Japan
(PRUG).

PRUG Presentation:
Friday night the Packet Radio Users Group of Japan will present talks on
their progress on high-speed digital networks in Japan.

Saturday Night Banquet Speaker:
Mr. Doug Campbell, of Triton Network Systems
(http://www.triton-network.com)
will be our DCC Banquet Speaker. Triton Network Systems is located in Orlando, Florida.

Vice President Product Management, Marketing, & International Business as
Vice President of International Sales, Marketing and Product Management, Mr.
Campbell leads the assessment of global community needs and spearheads the

development of Triton Network Systems' product and marketing strategies.

Mr. Campbell cultivated his management skills in sales, marketing and product development working 17 years for Nortel Networks. While based in Singapore, he built a multifunctional pan-Asian team, which successfully captured a 100% market share with MCI-WorldCom Asia, successfully introducing a number of new products. Prior to this, Mr. Campbell was instrumental in the establishment of an SDH broadband equipment joint venture in China and served as a member of the company's Board of Directors.

Mr. Campbell received a Bachelor of Engineering Physics degree from the Royal Military College of Canada in Kingston, Canada, and a Master of Business Administration from IMD (University of Lausanne) in Switzerland.

Banquet Prize Drawings:
Grand Prize – Kenwood TM-D700A (donated by Kenwood)
2nd Grand Prize – Palm VII Personal Digital Assistant (donated by TAPR)
Two Motorola Oncore M12 GPS Evaluation Kits (donated by Synergy Systems, LLC)
Microchip PICSTART-PLUS PICmicro Programmer (donated by Microchip)

PIC Seminar Prize Drawing
Microchip MPLAB-ICD (donated by Microchip)

Project and Demonstration Room:
The DCC is a place where people can talk about their projects and gain ideas for new ones. The Project and Demonstration Room has become a recent DCC tradition where people can bring and display their projects. The room will be located next to the registration room and across the hall from the main presentation room. The Project and Demonstration Room will open at registration time and be closed (locked) 11:00 PM Friday and Saturday night.

Map and coordinates:
A map of the conference hotel and coordinates are available at ftp://ftp.tapr.org/dcc/2000.dcc.hotel.map.pdf

Speakers:
The following is a list of presenters. PDF version available from ftp://ftp.tapr.org/dcc/2000.dcc.speakers.pdf

Speaking schedule (subject to change) is available from
ftp://ftp.tapr.org/dcc/2000.dcc.schedule.pdf

APRS Seminar - Friday September 22, 2000

John Ackerman, N9UR APRS WG
Steve Bible, N7HPR T-238 Weather Station
John Blowsky, KB2SCS APRS LOOKUP
Bob Bruninga, WB4APR APRSdos, satellite, etc.
Steve Dimse, K4HG Internet APRS
Walter Dunckel, KD6VYV Serial Control of D7/D700
John Hansen, W2FS KISS TNC, D700 Keyboard
Dale Huguley, KG5QD Weather Server
Larry Gahagan, AB0JM Wildfire Support
Byon Garranrant, N6BG TinyTrack
Mike Musick, N0QBF PalmAPRS/Tracker construction
Robert Osband, N4SCY Public Service with APRS
Tom Schaefer, NY4I APRS Email Gateway
Darryl Smith, VK2TDS APRS in the 2000 Olympics
The Sprouls, WU2Z/KB2ICI Mac/Win/XAPRS
Rob Wittner, KZ5RW APRS-CE

Main Session, Paper Presentation - Saturday 23, 2000

If the antenna has to be inside you might want to try a homemade ground plane hanging from the cealing. There are several ways you can go about this. Just strip about 19 inch of the shield of the coax off. Then find some stiff wire that you can hook to the shield at this point and bend about 3 or 4 pieces at an angle of 45 deg. to the ground.

Some have used magnetic mounts for the mobiles and put them on the top of a refrigerator or other mass of metal.

If you can get to the outside, then you can use any antenna that is made for the bands you want to use. Just because you have a handheld you are not limiated to a whip that is attached to it, but you can use any antenna type that you want to.

You'd better call up the ARRL and tell them that they've been printing it wrong
in the handbook and other publications all of these years. 3.5 to 4.0 is
refered to as the 80 meter band.

Besides, that's not what he asked about.

917. Wanted: 1997 Radio Amateur Callbook - hard copy

Newsgroup: rec.radio.amateur.misc
Date: 2000-09-18 00:00:00 UTC
From: Ron Bouder <rbouder@redrose.net>
Message-ID: <cf3dssgmd87rkqtt3r5ughlbrpb7onrcal@4ax.com>
Source record: 103175

A friend is looking for the 1997 Callbook - this is the printed copy ---- sort -of "telephone book size"

NOT the computer "software" version!!!

I think 1997 is the last time that it was in the printed format.

Thanks in advance

rbouder@redrose.net

Ah, your wasting your time Doc, you know that! ol'Bob is
just indulging in typical 'media speak'. He'd say the same
thing for poor old Hitler if he had been around then. He does
make a fairly good 'milk and honey' 'tree-hugger' though, the
kind that takes up for the poor trees by driving spikes into
them. Chainsaw + spike = 20 yards of blood and body parts...

That might not be exactly true. At the very least, it would involve a risk by the officer. If a police officer arrests me for some violation of a CFR or USC statute where there is no clear local jurisdiction, and the Federal agency with actual enforcement power declines to prosecute me, I will be suing the officer for false arrest.

Eric, I chose NOT to give out my social security number as it could be
used to compromise credit & loan systems or other things. The SSN is
what the Navy uses, NOT the "seriel number" as you are referring to.
BTW - that should be SERIAL number!!!!!!

> There is 1 fact though, due to numerous complaints, you were terminated
> from access to the @home provider you were using. Now you are using AOL

Another one of your lies, Eric. I have NEVER been terminated from
"@home". After boot camp at Great Lakes Naval Base I spent the weekend in
Sioux City & then sunday nite returned to Portland. While in Sioux City I
was
using my a friend's access to the internet (which was AOL) & using the
Dejanews
system for posting messages.

> incidently is a violation of AOL's acceptable use policy.
SNIP

Then go ahead & report it to AOL & see what happens.

I STILL ask you Eric, what does our father's military duty have to do with
anything? Why did you need to even bring this up?

>Instead,
>the state of Texas has 50% of the population of defaulters!

Erroneous. In raw numbers California(18,504) has the largest number
of defaulters, followed closely by New York(15,701) then Texas(14,628).
No one state has 50% of the population of defaulters. The total number
for FY1997(figures shown here) is 188,832. 50% of all defaulters would
be 94,416. No state comes close to this figure.
If you'd like to learn about these figures that you know so little
about, jog on over here:
http://www.ed.gov/offices/OPE/Data/97default/97state.html

Your post would seem to indentify you as a liberal, yet
you draw parallels which indicate you believe morality can be
legislated or mandated by the state. A very conservative idea.
If you'd like to discuss these ideas please meet me on 3950khz
this coming Friday night. ;)

Now you know why we threw that tea overboard. First off it ain't gonna happen here...Why? Too many of us rednecks with guns. Using CW is not such a bad idea. I see most of you have no concept of how to send HSCW (High Speed CW) like the spooks did during Nam. Oh well, just stay ignorant.

Where do you Yanks get your info from? I blame Hollywood!

In "theory" one is not supposed to listen to police or cellular
broadcasts but everyone does or did. Analogue cellular is now a thing of
the past, all or nearly all mobile traffic is digital and the police are
gradually encrypting their transmissions. The police here cannot pull
you over on a whim, they must have a valid reason ie. a busted tail
light or erratic driving. 99.999 per cent of the population do not own a
scanner or a gun or use agricultural diesel fuel. It would be a total
waste of police time to do so. The only thing the police will check (
other than vehicle ownership and a valid car tax disc) is whether the
driver of the vehicle has been drinking alcohol or not.

In the unlikely event of a scanner being found it can only be
confiscated if the owner has it tuned to a police frequency. If the
owner has no criminal record it is usually returned with a warning after
a suitable amount of grovelling at the local police station.

Actually, I think both services have too many people causing problems. Back in the late 60s and early 70s you didn't have anywhere near the problem you do now on CB. Linears were hardly heard of, much less heard from (in use) on CB. Even the ham bands held a lot less antagonism back in those days (yes, there was W2OY and a few others), but from what I hear, 75 and 20 meters tends to host quite a few less than friendly folks. The CBers I met back then were a great bunch, but the point I was trying to make was the difference in the manner in which I was welcomed (or not welcomed). There will always be the nuts and fruitcakes in both services. How are we welcoming newcommers to amateur radio?

In general high lines are not nearly the problem that old, grubby distribution lines can be. Assuming they are the usual 3-phase layout, only the unbalance current shows up in the near field anyway. Given the catastrophic nature of any failure and the numbers of people affected, your friendly neighborhood Reddy Kilowatt bunch is not going to let maintenance slip.

Beg, borrow, buy, don't steal, a battery powered radio, preferably shortwave capable and find out. Carry it with you and check the vicinity.

Personally, I have run 2, 10, and 15 mobile from a parking lot virtually under a 245kv line and listened to my el cheapo Grundig YB305 with no ill effects, to the radio reception at least. Until the glow dies down, it is hard to sleep :-)

Do the radio thing anyway; goofy noise sources are everywhere. And try to stay away from 400k ERP television stations and 100k FM if at all possible.

Enjoy being a homemoaner.

Dick N0BK

939. SSTV standards

From: dslosty@pipeline.com
Message-ID: <39c7e866.12839318@news.pipeline.com>
Source record: 103035

I recently picked up an old Venus SS2 SSTV monitor (uses long
persistence CRT) and a Robot 400 at a tag sale.

These units apparently use the original 8.5 second frame rate B&W SSTV
standards. Is anyone using that standard any more, or is this stuff
just fit for the parts junk box?

The Venus would be great to use since it just requires receive audio.

Obviously, computer SSTV would be more flexible but I'd still get a
kick out of using this stuff.

Can I modify the Robot 400 SSTV convertor for other standards?

73 ex tnx,

941. ** TOO FEW CHINESE HAMS IN U.S of A **

Newsgroup: rec.radio.amateur.misc
Date: 2000-09-19 00:00:00 UTC
From: njradiodude@aol.com
Message-ID: <20000919191557.02321.00000236@ng-cb1.aol.com>
Source record: 103037

I'm absolutely appauled! As I spin through the HF, VHF, and UHF bands including both the simplex and repeater frequencies, it becomes obvious that there are way too few people of Chinese lineage using these allocations with U.S callsigns.

I went on the local PacketCluster DX Propagation Logger, and did a "QRZ.com" search of nearly 100 U.S. callsigns observed, and not one appeared to belong to a person of Chinese ancestry.

There must be something we can do to get more Chinese people on the air. Maybe we should petition the FCC to get the rules relaxed even more pertaining to business communiations on the ham bands as to allow Chinese take-out joints to take orders over the air. We could have the federal government give them through the S.B.A enough money to get their own repeater on 2m, cross-link it to 440, 10m and 6m, allowing them more access to more bands to take food orders and free up their phone lines. Let's make the Chinese language a mandatory subject that proficiency must be proven in order to graduate from U.S. high schools. This way, there would be more Chinese-speaking people in ham radio and make those native Chinese speakers more apt to enter a hobby they have such a vast interest in, but are being kept away from because too few English-speaking people are willing to learn Chinese to make them feel welcome.

When will this line of BS stop?

There's too few blacks.

There's too few hispanics.

There's too few (ethnic group name of choice here).

Boo. Hoo. Hoo.

There is nothing keeping any group of people out of ham radio here in the U.S. Period. If there are only a few of any group involved in anything this country has to offer, it's simply due to a lack of exposure and a lack of interest. Period. There are no Black barriers. There are no Hispanic barriers. There may be some contrived barriers for those who wish to make some sort of statement and wave their banner of exclusionism, but the reality is what it is.

It's simple demographics. There are more White Americans in ham radio than there are Black and Hispanic hams in the hobby because there are more Whites in the country. Go to any other country in the world, and you will find involved in anything more people of the majority in it. Period. Be it ham radio, sports, fine arts, business, anything at all. In Spain, there are more people of Spanish heritage involved in anything at all than there are people from anywhere else.

The same goes for any country. The only thing that keeps anyone from anything in this country is ones lack of desire to succeed, lack of drive and lack of willingness to work for it. Period. Failure is easy and it's just as easy, especially in a free society, to blame everyone else for ones own failures. It's easier to blame the present on the past. It's easier to blame the system for being too hard and not being flexible enough to meet the needs of the few, than to work at getting up to par with the requirements of the system.

For those who don't hear enough of any particular group on the ham airwaves, make a Notice/Appeal of Proposed Rule Change to the FCC and try to make it mandatory that hams ID themselves as whatever ethnic group they are in. I would be "KB2FIK/S,F-C" (Scots, French-Canadian). Blacks could be "/A-A". Hispanics, "/H.."etc, etc. There are Blacks on the air. There are Hispanics. There are Chinese hams on the air. Want to hear and talk to them? Go to where they are. Want to see Whites? Go to a predominantly White neighborhood. Want to see Blacks? Go to a predominantly Black neighborhood.

I'm close to NYC and other nearby Eastern cities. There are predominantly Spanish-speaking 2m and 440 repeaters. There are a few predominantly Black-oriented repeaters in these two bands. If I or mostly anyone is on any repeater and someone with a different accent or dialect were to come on, they would be as welcome as any new-comer. Talk. Meet and befriend those who have been there a while. If you don't make instant best friends, don't blame ethnicity...maybe your interests were just not those of the people you just met. Maybe you had not much of anything to say. It is easier to trash those on the repeater and blame them for "not welcoming me because they must have known I'm -----".

Cultural polarization is a naturally occuring phenominon. If I had to move to a different country or even a different state, I, as most people would, seek out a neighborhood of familiarity. If I moved to Spain, I would have to learn Spanish. To get a Spanish ham license, I would have to adhere to their system, not use my American ethnicity to get them to change their system to meet my wants. It's like that here, too. Boo.Hoo.

I'm off the soap box. NEXT!

Let the trashing and hate mail begin.

Tom KB2FIK

I have a J-pole home-brewed from TV twin-lead that works amazingly well. I use it when I'm travelling. During my last trip I was able to hit a repeater nearly 10 miles away with my HT on it's low power (1W) setting. This was from inside a hotel room with the antenna hanging from the bedpost. I like it because it's very handy for travelling and provides significant gain over a rubber duck.

Hello Everyone

May I please ask for your help. I am sorry to be a little off topic, but the other newsgroups devoted to radio seem to be a lot less popular than this group.

Could you please tell me the names of shock jocks like Howard Stern, Don Imus, Mancow Muller? It would also help if I knew the names of the radio stations they work for. Would you know of websites/newsgroups where I could find this info

Thanks a lot, I would truly appreciate your help!!

Stan

What is all the uproar about ??? Now there is a quick guide to voting in every election. Just get your NRA sample ballot free of charge when you join the NRA. local elections, national elections, it is the only thing you need when you go to the polls. Don,t let people like AF2Y, some anti gun liberal from the NE destroy our rights. Guns would have helped his own people during the 30's and 40's, he should have learned a lesson. Support our rights, vote the NRA ticket!! ROOOOOOOLLLLLLLLLLLLL CAAAAAALLLLLLLLLLLLLLLLLLL coming soon!! HAMMER007

Well Doc, by your definition I am also a racist. No Spanish is NOT
WELCOME here. English is the language of the land. PERIOD. This has
always ticked me off. I have traveled to many foreign lands in my
military travels, and in every single one of them I NEVER thought
EVERYONE should learn English to talk to me. However after spending a
few years in the Miami area I discovered that my kids needed to learn
Spanish just to understand the grade school teacher. We moved back to
Alabama.

And since you brought up the subject of hispanic hams.....most of my
activity is on HF. My opinion of hispanic operaters is they are a
bunch of incompetent lids. Everything to the right and screaming into

the mike. And it helps if you detune your linear so it splatters.

Although I'm sure that's an exaggeration, it is, unfortunately, one of the few things the filthy-mouthed person has said which has a grain of truth in it.

He's one of a very small number of individuals, perhaps the only individual, with the distinction of having a majority of his recent messages consist mainly of gutter slang references to another man's scrotum. The fact that he doesn't see that as a negative says volumes about his antecedents.

In amateur radio, there's a saying, "the weaker they are, the longer they talk." In the newsgroups that might have to be translated to "the weaker their arguments, the more they post filthy language and personal insults."

> But don't defend a man who calls for the
> extermination of entire races of people, and who also says that race
> mixing makes him sick.
[...]

We need to think beyond mere surface appearances, following the path pioneered by the author of the phrase (now a magazine title) "Deep Politics."

Since racial mixing is one way in which entire races of people can be exterminated -- in fact, it is possibly the only sure way to accomplish such a thing -- a man sickened by it is not necessarily endorsing genocide, and in fact may be a far stronger opponent of it than you are.

Beware an establishment which kills people by the hundreds of thousands (for "good reason" -- or so they tell you) and then incites you to hate those who are so incredibly "evil" that they actually want their race to survive.

With all good wishes,

--

Kevin Alfred Strom.

959. ID Wizard - New Software

Newsgroup: rec.radio.amateur.misc
Date: 2000-09-19 00:00:00 UTC
From: J Tabor <denews@taborsoft.com>
Message-ID: <ssf6l3kmcuske1@corp.supernews.com>
Source record: 103114

Greetings All,

Just released, a new "downloadable" software product named "ID Wizard". It is QSLware, meaning it's basically "free". The only catch is we request users send an email with comments.

Here's a little info about the software.

"
ID Wizard is an ID timer with system clock setting and miscellaneous tools.

Tools include:
Notes - a full-featured "text" editor
Calculator - with "tape" display
Net Utility - Trace Route, Ping and WhoIs
Time setting via the net with "Simple Network Time Protocol"

The clock face is fully customizable. User can select a bmp picture for the face, plus select clock hand color and more.

Screen shots, more info and download from:
http://www.taborsoft.com/softstuff/idwiz/
"

Also available, a fancy ID timer, as QSLware. It's named NERDAlert 2000. It's presented in a more "fun" spirit. You will find it a very capable ID timer. If you wish to look at it:
http://www.hamtools.com/nerdalert/

Regards,
Jim

That makes no sense at all.
Amateur radio is all about communication. If you communicate more you are weaker?
I consider communication as a form of obtaining power and connection.

What all sides are missing in this discussion is the realization that their concept of "racism" is completely false.

This term "racism" is commonly supposed to imply that those who love their own race and want to see it continue also necessarily want to harm others. That isn't true -- though the billionaire media elite (for reasons of their own) want us to believe that racial feelings are "evil," and unfortunately some disturbed so-called racialists buy into that media image and try to emulate it.

Racial feelings are as natural and as inborn as sexual feelings, and about as likely to be eradicated. The attempt to do so will bring misery to our children, and bids fair to exterminate the race which brought us the Parthenon and the Saturn V rocket and everything in between.

And, even if you succeed in committing genocide through racial mixing, you will still not have eradicated racial feelings, since race-formation is inherent in the evolutionary process, and will continue to assert itself.

New races will form, develop a consciousness of their unique identity, and diverge from other races.

So, not only is multiracialism going to result in violence and misery; and genetic, environmental, and cultural destruction on a cosmically tragic scale; but it will also utterly fail to suppress racial feelings and "the preservation of favored races in the struggle for life" (as a great man put it). So it is also completely pointless.

With all good wishes,

--

Kevin Alfred Strom.

The problem with this whole verstunken discussion is what is race?

1. Modern DNA research can find no correlation among external characteristics and much of anything else. Race is a scientific non-starter. Kevin apparently is aware of this -- he gave me the starting point of potential 'races' used in the research by Dr. Cavalli-Sforza. Mathematics is pretty neutral and not prone to political correctness; seems like a pretty good, scientific way to define 'race' if indeed it means anything at all.

2. When asked about this, we seem to get some sort of babble including the words "self-defined". This might describe tribes, country club members, or street gangs but it doesn't do a whole lot for establishing a basis for discussion when I can shift from Caucasian to European to who knows what with more ease than I can shift from Crypt to Blood or Eagle to Elk to Moose. In some circles, this is known as confusing the rumblings of one's stomach with the immutable laws of God.

3. To withdraw from the herd to be with one's own kind -- however defined -- is certainly the right of every human being; monks, nuns, Amish and assorted Mennonites, not to mention Mormons of years past have done it for centuries. While some of the followers leave everything to be desired, Kevin et cie have generally been a lot more civil than some of their detractors. If they want to chase chimera who really cares. Do it by themselves and we will all be happy; act like Amway salesmen and expect a few brickbats.

Trying to make sense out of a certainly rubber concept and probably a non-existent one is just more donkey work than I for one wish to do.

Instead of giving away licenses to unqualified "minorities" (in quotes because actually Whites are a tiny, increasingly persecuted, and shrinking minority on planet Earth), why not try to equalize the sexual imbalance in amateur radio?

After all, it's an even more striking disparity than the racial one.

WA4GGL has even made the suggestion that no male be allowed to obtain a license until females consitute 50 per cent. of the licensed amateur total. It will take time and effort, but we can do it!

As long as you're promoting unconstitutional government actions, why not at least promote one which will make the bands far more interesting and improve the aesthetics of hamfests?

With all good wishes,

--

Whatever Indiana says doesn't matter anyway. The FCC made a ruling back in 1993 (wasn't it included in 93-17?) that indicated that the ability of an amateur radio operator to listen to any/all public safety frequencies "is in the national interest" - so your state's law is trumped anyway.....

Far better to be filthy - mouthed than filthy - minded. After all,
didn't your boss Pierce say, in a 1997 broadcast, the following words:

"In 1975, when I began writing The Turner Diaries . . . I wanted to
take all of the feminist agitators and propagandists and all of the
race-mixing fanatics and all of the media bosses and all of the
bureaucrats and politicians who were collaborating with them, and I
wanted to put them up against a wall, in batches of a thousand or so at
a time, and machine-gun them. And I still want to do that. I am
convinced that one day we will have to do that before we can get our
civilization back on track, and I look forward to the day."

I am the filthy one? Your master Herr Pierce wants to kill
people one thousand at a time, and I'm filthy - mouthed?

Lord have mercy, the man's completely lost it.

S.

Brett:
The correct answer is:
Any location where any power line will be visible from the uppermost part of the antenna structure is too close.

The comment that distribution lines are more likely to cause radio noise than transmission lines is correct. All cases of noise can be mitigated, but some are too expensive, and often the downsized utility has no one knowledgeable enough to locate the sources, anyway.

Pay the utility which serves the area a visit and ask two questions:
1. Do you have TVI mitigation capability?
2. Does this capability extend to shortwave?

If they can answer either question without having to go into an engineering conference, you will be miles ahead.

I was happy with the INTELLIGENT email responses that I received to my posting on affirmative action. I did receive several racist emails as well, and that of course was expected considering the race and age of the majority of hams who use ham newsgroup sites. Several of the intelligent, thought - provoking replies came from Hispanics who thought that they too were grossly unrepresented in our hobby. I believe that it is our civic obligation to encourage Hispanics to enjoy amateur radio as well. I'm proud to say that in my metropolitan area, which is near 3 fairly large cities, Hispanics are finally catching on at least on our VHF and Uhf repeaters. I am happy to report that (at least in my area) that many communicate in Spanish, which makes the repeaters a bastion of cultural diversity, which is what our hobby should be all about. I would hope that many in this newsgroup make a special effort to show off their hobby to Hispanics in their own communities (especially in the use of 2 m and 70 cm radios and repeater operation) and help them with Element 2. Make sure that they understand that Spanish is welcome and they need only use English to identify their stations. I in turn hope to reap the benefits of learning our country's second language, Spanish, which will become even more important in upcoming decades as our nation undergoes further shifts in the proportion of Hispanics. My biggest regret is not applying myself in Spanish during high school. Now I know what my grandfather meant when he said "Youth is wasted on the young."

The FCC, too. By definition, the "allocation" from 3.5-4.0 MHz is 80 meters, but by convention among most hams, the phone part of the band, irrespective of the actual MHz, is referred to as 75 meters, and the CW part is called 80 meters. To argue the point of the regulatory band definition is akin to attempting to separate fly shit from pepper and does not contribute to the valid point Dan was trying to make.

Jason, I don't know what your apartment building construction is like. If the building has a lot of steel, you may have a problem. I have an old HTX-404 which worked fairly well, but I had problems hitting one favorite repeater when I got perhaps 10 miles away. Not readable on low power, and some 'bacon frying' on high power. I purchased a flexible gain antenna perhaps 16 inches long or so with the BNC connector on it. It made a huge difference. From the location I mentioned which was perhaps 10 miles away (the vet's office), I am now full quieting into the repeater on LOW power. I have no problems 20 miles out with the HT and have used it from inside the car maybe 6 or 8 miles away with no problems (not recommended since the car attenuates the signal probably 10 dB!). At work, however, the building has a lot of steel inside and I really can't use the repeater even though it may be only 5 miles away. Walking 1 or 2 feet can bring it in or drop it out. I have to go outside to use the HT. What I am saying is that buying a gain antenna may indeed work for you - IF it isn't the building that is killing you. Do you know anyone with a gain whip for the HT that you could borrow it for a day (or an hour or so) just to try it and see if that helps?

Best of luck and 73s
Jim AA2QA

Being that the FCC IS the governmental authority over the matter of
radio, and no other body or authority is higher, why would they go
through the trouble of having tests to "obfuscate the fact"? they have
nobody to answer to (the FCC members aren't even elected, their
appointed), and I feel they wouldn't go through the trouble of such
tactics to hide anything.

The
> FCC really doesn't care - as long as no one complains.

You are very correct. However, this can be said about most legistative
or governmental bodies on nearly all levels.

> Frankly, what with the internet and cell
phones,
> about the only people being attracted to radio these days are the
> people who enjoy jamming other people

If this is true, we and the FCC are equally to blame. However, much has
been done in the area of self-regulation AND enforcement from upstairs
(hollensworth has really been kicking proverbial butt). The bands,
including 20 and 80 meters, aren't the madhouse they were a few years
ago. There has been MUCH improvement, but more can be done.

> Who knows? I doubt amateur radio will disappear, but the

EXCELLENT point... fact is, most governements GROW, they do not RECEDE... until they ultimately suffocate themselves and thier constituents (subjects, citizens, etc)... Point well taken; if anything, there will probably be STRICTER inforcement of it's use. This is not to say STRICTER licencing (do NOT get the two issues confused).

>

Indiana code makes it illegal to posess a "portable police radio" anywhere but in your residence or business.

A number of persons are xempt from the law.Among those are anyone posessing an Amateur Radio License. I cary a copy of the current section of the Indiana code in my vehicle.

The police officer making the bust was obviously unaware of the exemption.I have been questioned on it several times as I have bolted a scnner into my cars since about 1983

Indiana hams can pack a scanner.I carry a copy of the code as below with me in my vehicle.Hams come under exemption #6

IC 35-44-3-12 ����Sec. 12. (a) A person who knowingly or intentionally: ��������(1) possesses a police radio; ��������(2) transmits over a frequency assigned for police emergency purposes; or ��������(3) possesses or uses a police radio: ����������(A) while committing a crime; ����������(B) to further the commission of a crime; or ����������(C) to avoid detection by a law enforcement agency; commits unlawful use of a police radio, a Class B misdemeanor. ����(b) Subsection (a)(1) and (a)(2) do not apply to: ��������(1) a governmental entity; ��������(2) a regularly employed law enforcement officer; ��������(3) a common carrier of persons for hire whose vehicles are used in emergency service; ��������(4) a public service or utility company whose vehicles are used in emergency service; ��������(5) a person who has written permission from the chief executive officer of a law enforcement agency to possess a police radio; ��������(6) a person who holds an amateur radio license issued by the Federal Communications Commission if the person is not transmitting over a frequency assigned for police emergency purposes; ��������(7) a person who uses a police radio only in the person's dwelling or place of business; ��������(8) a person: ����������(A) who is regularly engaged in newsgathering activities; ����������(B) who is employed by a newspaper qualified to receive legal advertisements under IC�5-3-1, a wire service, or a licensed commercial or public radio or television station; and ����������(C) whose name is furnished by his employer to the chief executive officer of a law enforcement agency in the county in which the employer's principal office is located; ��������(9) a person engaged in the business of manufacturing or selling police radios; or ��������(10) a person who possesses or uses a police radio during the normal course of the person's lawful business. ����(c) As used in this section, "police radio" means a radio that is capable of sending or receiving signals transmitted on frequencies assigned by the Federal Communications Commission for police emergency purposes and that: ��������(1) can be installed, maintained, or operated in a vehicle; or ��������(2) can be operated while it is being carried by an individual. The term does not include a radio designed for use only in a dwelling. As added by Acts 1977, P.L.342, SEC.1. Amended by P.L.162-1994, SEC.1.

Well stoli, if u haven't noticed, wearing ur callsign on a hat or shirt is just part of the hobby. Wearing a 2m HT is also common of the standard ham. Most hams are proud of the hobby. Amateur radio is just like any other type of recreation: when u see a deerhunter, u usually see him wearing camo, a rifle in his hand, and probably some gadgets hanging from his belt. See my point.

And the comment about what hams talk about on the radio: they talk about what is on their minds. What do u usually talk about?

It looks like u would have noticed what ham radio was all about when u devoted all of that time to study the ham exam and spend ur money on the radio. Expensive lesson I guess, eh?

Some friendly advice: Next time u decide to enter a hobby, make sure u find out EVERYTHING about it before u decide to devote something into it. And if u have just started playing golf, then I recommend u don't buy the first set of clubs u see. And before u play 18 holes, u should probably go to the driving range to make sure u can hit a ball first. I mean, u wouldn't want to start slinging those clubs in the woods on the first hole now would you. LOL

Jody

Of course populations with different geographical and other stresses develop
ways to cope and the most successful ones survive; gee whiz, Darwin was
right. There are indeed genetic markers for particular groups depending

upon their history. The classic one, of course, is melalin production which is pro-survival in tropical climates but generally results in Vitamin D deficiencies above the 45th parallel. Obvious as hell except that there is no correlation to blood group or HLA proteins in the immune system or anything else. Skin and hair color are distinctions without differences. There are some uses, I guess; I would expect some more rejection of transplants among those with tropical backgrounds and might tend to suspect lactose intolerance when a darker-skinned or curly-haired baby insisted on throwing up on me but that is about the limit of it.

Interesting way to obfuscate two basic facts:

1) the genetic variances in the whole blessed human race is less than that found among any 100 randomly selected West African monkeys. The great lesson of genetics is how similar humans are, not how different.

2) Of the genetic variations observed by the team:
a. 85% are variances within the same population.
b. 6% are variances on the same continent
c. leaving 9% for variation among continents, largely distance from Africa.

> From these kind of tables, Cavalli-Sforza reached this general
> conclusion: 'The most important difference in the human gene pool
> is clearly that between Africans and non-Africans.'"

Yup, variation increases down the chain but in a manner where the only thing that can be said is something pretty trivial.

To come up with a definition of *race* that is not based on trivial variance, there has to be some statistical basis for defining one if we are not going to be chasing the ends of the earth or the luminiferous ether. You seem to like skin color, melanin. OK if you want but what in blazes am I going to do with this factoid if I cannot connect it to anything else? To what does it correlate? Advertisers do cluster analysis all the time; regressions, correlations -- it isn't like it is some arcane rocket science. Software exists that does it virtually automatically, SAS and SPSS come to mind. Find the clusters, do the math; because until you do we are justified in a strong suspicion that your output is processed stomach rumblings mixed

with self-justification.

Dick

992. FS: The Original "NORCAL 20" 20M CW QRP RIG

Newsgroup: rec.radio.amateur.misc
Date: 2000-09-20 00:00:00 UTC
From: bcsw@home.com

Source record: 103053

This was one of the first batch. I built it with great care, and installed a
10-turn POT and did the suggested mods, and tuned it to "prefection"
with an 0-scope. Excellent QRP rig, worth its weight in gold. Unfortunately,
I just don't have the time for radio these days, and I need to pass this
baby on to someone who can enjoy it and get some use out of it.
I am asking the same price I paid for it, because it's worth it, and it's
in good shape. PRICE: $120.00 + $5.00 priority mail shipping.

Email me if interested. Prepayment with M.O. or check preferred.

I associate nationalities and a person's color to what they will most likely act like based on averages.
I don't consider this racism, I consider this as "predicting and being aware of my surroundings" which is a survival mechanism.
I feel much safer when I can be around people of my chosing, those who I can predict their behavior with a favorable outcome.
Thus I hang around my own kind and type of people as I can relate to them much better than I can anyone else and I can better
predict them.
This isn't bad nor is this racism. If it is, then oh well, guess I feel safer being "racist".

This is changing, however, due to massive illegal Hispanic immigration and birth rates among blacks which far exceeds that of whites.

Perhaps the reason there are too few Hispanics using repeaters is because most Hispanics are busy bootlegging on the lower (CW) portions of 10 & 40 meters, and 11 meters as well. Just a thought.

Eric - By these posts you will be proven to be a liar since I am posting
from the @home system. The MAIN purpose was to ask you about YOUR
experiences in the radio
hobby since I have never seen you post on-topic yet on these newsgroups.
What type
of radio activity do yoy like to listen to or participate in?

What type of antennas do you use?

AMEN!
Nothing against Chinese or Asians, whom I highly respect, but all this Diversity being rammed down our throats is getting a little much. In fact... look at the number of Asians who come to this country and assume the language in record time, yet our southern neighbors want everything in Spanish... let em go to Europe... See if the Germans or the Dutch will bend over backwards to provide everyting in multiple languages... I think not!

People like Richard McCollum don't live in the real world - only in the as yet, still being explored, world of genetic "clusters" and "variances".

Reading my local paper for the crime reports, I soon developed a healthy fear for "clusters" of blacks, and the "variances" of the skin colour, of the majority of muggers.

> Spanish.

Only if the Spanish speakers monopolize it... which is a possibility. I'm new to this newsgroup, so don't know if this has been wrangled over before, but i'm glad i (so far) haven't seen that tired old argument about communications having to be in English in order for them to be LEGAL. I am not hispanic but like to use ham radio for language practice (Spanish, French, Esperanto, Interlingua & Latin if the latter were possible). I recall with undiminished hatred the efforts of hams in Santa Cruz CA (KI6EH, NW6U, KG6EE, N6IYA) to shut me down on packet & repeaters for using Spanish, and for even TALKING about it in ENGLISH, in 1991-92. Are their breed dying out, caving in, gone on to other things, or what these days? The same group of old farts in Santa Cruz have consistently refused to make ham-packet-TCP/IP available to the public (so i did it on my own when i lived in the Monterey Bay area in 1997-98).

OK, flame away now.

How "racist." What about Americans who are also Vietnamese, Korean,
Chinese, Japanese, German, Russian, African, Samoan, et al?

I only want to interest those who will abide 100% by our charter
as outlined by the FCC:

97.1 Basis and purpose.
The rules and regulations in this Part are designed to provide an amateur
radio service having a fundamental purpose as expressed in the following
principles:
(a) Recognition and enhancement of the value of the amateur service to
the public as a voluntary noncommercial communication service,
particularly with respect to providing emergency communications.
(b) Continuation and extension of the amateur's proven ability to
contribute to the advancement of the radio art.
(c) Encouragement and improvement of the amateur service through rules
which provide for advancing skills in both the communications and
technical phases of the art.
(d) Expansion of the existing reservoir within the amateur radio service
of trained operators, technicians, and electronics experts.
(e) Continuation and extension of the amateur's unique ability to enhance
international goodwill.

Anyone not willing to abide by all the above can just as well stick with
their cell phone and PC.

Orrin,

Let me tell you how it went in Miami/Ft. Lauderdale in the early 80's. The Spanish speakers took over certain machines and ignored ANYONE speaking English. The English speakers too over certain machines and ignored ANYONE speaking English.

Thats how it will continue to go. That is until the folks speaking Spanish learn English. Which strangly enough is what is spoken in the USA. What a coincedence.

This is called prejudgement or prejudice, the key word-part being 'pre'. It might surprise you to know that I do not disagree with what is, after all, a survival characteristic. Certainly the yoyo who goes thru life not learning a damned thing from his experience will not, on average, live long enough to procreate. Darwin was right again.

I have lived long enough to see 'discriminating' go from describing a man of taste, intelligence, and experience to a term for a knuckle-dragging clod. The earlier definition is more to my liking. I am not selling political correctness.

There is always a certain preference for the warmth at the center of the herd; we do not refer to our baliwick as 'home' without reason. Being carried by the herd generally insures a quantity of food and water albeit of lower quality because it has already been eaten over by others. Risk vs Reward matrices exist even in buffalo herds. Where one chooses to be in the scheme of things is largely up to the individual animal although the herd has its own collective opinion of some actions; old bulls end up upwind and on the outside in a blizzard while older cows end up downwind. These same old bulls get to do duty on the flanks when traveling in coyote country. The warmth comes at a price. So do most things. Make your decision and live with it; actions have consequences. As Dirty Harry put it, a man must know his limitations.

Where I get off the trolley is when some sort of mythology or pseudo-science arises that grants some sort of self-defined 'status' for being part of something one had no part in creating. Bellowing 'we're number one' because you owned a Packer jacket a few years ago is merely ridiculous; backing the winner confers nothing. Living in Green Bay in the Holmgren years merely

conferred frostbite. Bellowing 'he's number ten' is equally absurd. And that is my point, there is no scientific basis for this cloud-in-the-sky concept called *race*. You get no points for merely backing the winner. Babbling about an indefinable concept or one (as in this case) that has given trivial results certainly does not confer any particular status. Your attitude and behavior are perfectly reasonable and perfectly understandable; just don't try to coat it in an aura of scientific respectability.

Dick

> barriers that prevent those people from attaining the objective.

Exactly!

In addition, I'd add that there is a second element required before any such Affirmative Action "solution" could even be suggested. That is: Affirmative action is a remedy to increase participation of a group where there is only a limited number of positions or openings available. Such is NOT the case for ham operators as there has never been any limit to how many licensed hams there can be.

Today and as long as there has been ham testing, the ONLY criteria for becoming a ham was passing the test(s). There was never a case where a limted number of licenses were available and, therefore, only the top N% would get licnesed. No minority can point to any such discrimination in ham radio's past or present licensing that would have put that minority at any unfair disadvantage over any other non-minority in obtaining a license. Black, white, red, brown, yellow, male or female...you pass the test you get the license!

My comments are not intended to support or oppose the concept of affirmative action which is an ongoing debate of major proportions. My comments are targeted at why, even the concept of affirmative action is in no way applicable to licensed hams.

Cheers,
Bill K2UNK

Those are all incorrect, John. As an example:
"QRP" states "I am decreasing power," while
"QRP?" asks "Shall I decrease power?"

Do you see the distinction?

As communicators first and foremost, we need to be precise with the
information we convey.

Not just on the ham bands, Dan. The nightly singing in Spanish, emanating from the Mexican fishing boats on 2182 kHz (the international SSB calling and distress frequency) drove us Coasties crazy. One of the drunk skippers would finally fall asleep on his Auto Alarm button, setting off alarm bells at every shore station up and down the coast. A nightly occurrence. 73, Jeff KH6O

Good evening all. I am in need of four VHF Alphanumeric pagers in the 160 mhz range. My exact frequency is 163.250. They can be new, used, Motorola, or another brand. We will be using them for a local automatic security system. Can anybody help or point me in the direction of one who might? I have heard of a Mr. Radio somewhere in the midwest but have not been able to locate him. Please respond via email. Thanks and 73's Don Smith KB6GQA

I don't think so. The FCC recently rejected a proposal to allow CBers to do DX contacts (they do now, but it's against the rules). Reason for the rejection was that amateur radio is the proper service for DX work. Thus the FCC isn't looking to make CB a part of ham radio.

73s good buddy :-)

Hammer Man teases us some more with ..
>ROOOOOOOLLLLLLLLLLLLL CAAAAAALLLLLLLLLLLLLLLLLLL coming
>soon!!

Ok .. so we're waiting, Hammer-Man. Keep us posted .. a little advance notice would be a lot of help. Like will it be day or night ?? It matters to me.

If at night, I'll need to get the night off from pizza delivery night school and after hours profit college. You get the picture, so keep us posted.
>ROOOOOOOLLLLLLLLLLLLL CAAAAAALLLLLLLLLLLLLLLLLLL
declared a special event by the ARRL and get the FCC to issue a special event call sign for it. W4RC or something. The RC would be for
>ROOOOOOOLLLLLLLLLLLLL CAAAAAALLLLLLLLLLLLLLLLLLL ! ! Get it?

Gotta hurry on to class at after hours profit college. Tonight's lesson is "When Will Ronald Reagan Leave Office In Disgrace?"

Hey Hammer Man .. you give us a
>ROOOOOOOLLLLLLLLLLLLL CAAAAAALLLLLLLLLLLLLLLLLLL and I'll give you a practice prediction. Deal?

Uh hunbh!
then why the big sdpeal about it being a state secret?
by making such claims, all you do is set yourself up
to look like a loony tune (which you appear to be
most of the time)

Secondly, I don't believe you are currently in military service.
your assertions to such appear to be because you were
terminated from the @home network for abusive behavior.

Still, I think this arguement has gotten old and I have said the
last words on it I am going to say.

Jason,
actually, you are lucky.
I hear them every evening here (I do have a shortwave
receiver here and use it often).. There is a fair
amount of the same games on 2m/70cm (but you
only seem to find that in places like Phoenix, Las Angeles,
san diego and perhaps new york city).

Still, by carrying on like this, these "hams) are jeopardizing
the bands for the rest of us (the FCC might decide that
the spectrum space could be put to better useby some
commercial concern and tell them hams "too bad! you weren't
willing to regulate your bad apples".).

When the bands do get threatened as a result, we will only
have ourselves to blame for the fact that we let these "loose
cannons on deck" in the first place!

I own several (bearcat models 200xlt, 245 xlt, radioshack 2006
and an aor 8000).

I also own ham gear (such as a yeasue FRT-470 and Kenwood
TR-7400A.

I listen on several chans at the same time (phoenix has a lot
of activity particularly on the trunking chans).

so, why is it now that you question whether I am on topic
when this is the only on-topic message you have sent in days?

Actually, I think this guy Stoli126 is a ham. I did a search on
stoli126 in the past deja forums and found him talking alot about ham
radio. It seems that he is a new ham and had alot of questions in the
forums. I think stoli simply just got fed up with the hobby. It was
probably too technical for him.

If you mean that it's difficult to distinguish racial membership
at the edges of racial categories, then of course you're correct.
That, I would guess, is why Kevin Strom included self-definition
in his comments on race. But if you are arguing instead that
genetic science has somehow disproven the evidence of our senses,
and that races are mere social constructions without any
objective reality, then you're mistaken:

"Cavalli-Sforza's team compiled extraordinary tables depicting
the 'genetic distances' separating 2,000 different racial groups
from each other. For example, assume the genetic distance between
the English and the Danes is equal to 1.0. Then, Cavalli-Sforza
has found, the separation between the English and the Italians
would be about 2.5 times as large as the English-Danish
difference. On this scale, the Iranians would be 9 times more
distant genetically from the English than the Danes, and the
Japanese 59 times. Finally, the gap between the English and the
Bantus (the main group of sub-Saharan blacks) is 109 times as
large as the distance between the English and the Danish. (The
genetic distance between Japanese and Bantus is even greater.)

From these kind of tables, Cavalli-Sforza reached this general conclusion: 'The most important difference in the human gene pool is clearly that between Africans and non-Africans.'"

No, AF2Y, you need to pay better attention. You miss a lot when you
don't pay attention well.

Anyway, if you read the quote I replied to, I said nothing about his
appeal for hispanic use. Instead, I condemned his comment that "racist
emails...of course was expected considering the race and age of the
majority of hams who use ham newsgroup sites."

After that, I saw no reason to comment further on his nonsense about hispanics.

While I agree in principal with the above posts, I must, in all honesty, point out that in Europe, most people speak at least 3 different languages. You mention the Germans and Dutch. Very likely most people will speak German, French, and English. I am not personally familiar with this, but some of our people at work have been over in Hungary and they even mention that many people speak four or five languages. I think we get a little self centered at times - why, in heavens' name, are we still carrying a full roster of ASE threads as well as metric in our shop? Even the British abandoned the shilling and went to a decimal system. If we are so good, why have I seen a small access plate mounted with four screws - two 6-32, one 4-40, and ONE 5-40! 5-40? Come on guys! Other than that, I agree with the posts.

Ok, then by your definition, when in Harlem, or downtown Dallas, or Downtown Atlanta or Downtown Chicago, or Downtown Washington,DC
or LA or Oakland and when I take a wrong turn into an aweful part of town and I see a bunch of guys with chains hanging off them,
giving a bunch
of funny signs to each other and looking at me like they are going to kill me or rob me, then I'm predudice and that's bad?
So, you are saying that to be completely free, I must walk into the most dangerous part of any city and embrace everyone.
Uhhhh, I don't think so, but thank's for the offer! :)
By the way, Discone antennas with a longwire "sloper" attached to the top works great for shortwave and VHF/UHF!!!

Oh, sorry then. Yes, I must learn to read the whole thing.
I was expecting someone to come back and say "but you will never go to all those places you mentioned
so you are talking out your butt".
Not true, I go to all these places, frequently as I travel alot and spend alot of time in downtown areas of cities.

Its called "profiling" - a tried and true method of predicting what a person is doing, or will do, based on what others like him has done in the past. Of course, people do this all the time, but when another race is concerned, the word "racial" is thrown in and it suddenly become a bad thing.

Well, that is a nice theory about what "true" affirmative action should be, but it hardly relates to anything we have here in the United States. Here, the "unreasonable barriers" removed can include anything, from language to ability to do the job. In other words, what we have here is a system that takes from one group (whites) and gives to everyone else (even if they just came over on the boat last week).

You don't have to seek out Harlem. As the black population expands,
there are areas like Harlem growing in just about every town in America
(large and small).

The Hy-Gain "slider" was designed to plug into a jack in the rear of
certain Hy-Gain radios. When activated, it allowed the RECEIVER to tune
through the bands. Since, out of box, it did not allow VFO on transmit,
it was considered legal. However, cutting just one wire inside allowed
it to function on transmit as well, which is what most people, who owned
them, did. But THAT was definitely NOT legal.

I buy your idea of Morse testing elimination, and letting it "go with
the flow" but refuse to buy your idea on the test restructuring, and
what I understand to be, the increased emphasis on testing ability, etc.
It is a hobby, just like model air plane building. Different levels,
and skills required, but everyone has an option to get into it.
Open the doors on the testing and the novice class. Make the hobby
available, with ease, to all who are interested. Increase the fee,
turning the increase in $$ toward general educational publications for
testing in the remaining two levels of the existing caste-like system,
and permit the novice licensees to set and accomplish goals of thier
choice.
Bury this elitist attitude of "I worked hard for my ticket"! You know
damn well that with the publication and ready availability of ALL of
the questions and answers to all of the tests, that in many cases, all
that is tested is the ability to memorize. And, in our loving society,
we are not going to keep the questions from the public!
Amateur radio is a hobby! It aint supposed to be brain surgery. Lets
get on with "salting" the Ham population and taking the mystery out of
a rather simple hobby. Flood the airways with action and get a
stagnate, obviously decaying hobby, reenergized.

How long are your packs lasting???

>>...getting something other than a Nickel Cadmium...

What are your use and charging habits?

>>...NiMH or Lithium Ion...Do they suffer from a memory effect...

No - nor do modern NiCad packs.

>> ...do they last longer than Nickel Cadmiums?

NiMH packs will last about 2/3 the total number of discharge-charge
cycles when compared to modern NiCad packs.

They are lighter ... easier on the environment when it comes to
disposal ... and usually offer greater amperage in the same physical
size pack. BUT they require SPECIAL HANDLING when it comes to charging.
You NEED a charger that recognizes NiMH packs - as the proper charging
algorithm is much different for NiMH than for NiCad packs.

> ...are aftermarket battery packs good?

Many reputable firms offer packs for your radio!

> Also, are they compatible with my NC-50 one hour Rapid Charger?

ONLY NiCad packs are to be used in your NC-50 charger.

As have I. I am not about to minimize cultural and economic differences nor am I about to fall into the great historical Noble Savage myth. But I do like to call things what they are.

When by whatever mechanism herds meet there is going to be some conflict. Look, for example, at the Czechs and Slovaks. There is nothing racial or genetic or whatever about their decision to split up; the difference is a matter of whether you have spent the last 500 years or so under Austrian rule or Hungarian rule and not a lot more than that. Their evaluation of the Risk vs Reward matrix in merging the herds led to a calm, quiet divorce. In other parts of the Slavic world history has been less kind.

On a personal level, one does what it takes to stay alive. Refusing to learn from experience is not the brightest thing one could do. But it is generally a good idea to remember that the human being is notoriously poor at linking cause and effect; he is generally not really good at mathematical odds either as every gambler knows. On the spur of a crisis, OK, but it is a good idea to check your results back at the lab. In this case, the lab has pretty well squashed the hypothesis that skin color is a cause of much of anything.

Not recognizing that skin color has led to an isolated - certainly different - cultural history would be silly but skin color is not the only thing that causes that. By letting what is really something of an irrelevance get to be a big issue, one is not acting in his own best interests.
While focusing on black barbarians, he is opening himself to being bopped on the bean by a white barbarian or having his bankroll plucked by other means. Call things what they are.

We know that a lot of trading and sailing was done as early as 2-3000 BCE. The tin to make the bronze of the Bronze Age came either from Afghanistan or

Cornwall. Back off a bit and put yourself in the position of a trader or sailor in that trade. The mechanics of your trade are problem enough but you have to deal with all sorts of different people as a result. Your reading of your personal Risk/Reward matrix gets you out of your herd and into the world. How do you handle it? What is important???

Dick

> Dwight Stewart (W5NET)

The results are only as good as the profile. Using color as a proxy for the true underlying variables results in missing a lot and hassling some people who don't need hassling. In far too many cases it is a crutch for lazy and not-too-bright law enforcement types. By the time it gets to the street, the best profile can easily become a campaign against DWB; and it has.

If you want to see profiling run amok, look into the Unibomber case.

On a visit to the White House, I must have tripped some profile wire and got the up-against-the-wall treatment. Once was interesting, after about the 32nd time it would get old as hell.

The best solution I've found for this problem is to slip pieces of thin wall
poly pipe over the antenna elements. Bird lands, pipe rotates, bird falls off.
Funny as hell.

There's nothing wrong with whites gravitating to whites and blacks to blacks and hispanics to hispanics. It's human nature. But it is wrong when someone considers himself superior as the criterion for association which is what Strom is all about.

1056. ALABAMA QSO PARTY THIS SUNDAY

Newsgroup: rec.radio.amateur.misc
Date: 2000-09-21 00:00:00 UTC
From: Dan/W4NTI <w4nti@my-deja.com>
Message-ID: <8qe531$2dq$1@nnrp1.deja.com>
Source record: 103008

COME ON IN AND GIVE US A POINT.

Dan/W4NTI

http://www.qsl.net/kt4xa/aqp/rules.html

Alabama QSO Party

2000 Alabama QSO Party Rules
1. Objective:
For Alabama stations to work as many other stations within
the contest
period as possible and non-Alabama stations to contact as many
Alabama
stations as possible.
2. Contest Period:

1800Z Sep 24 to 0100Z Sep 25
1 PM to 8 PM Central, Sunday, September 24, 2000
3. Exchange:

County for Alabama stations
State (province) or DXCC entity for others
4. General Rules:

Alabama stations work anyone; outside Alabama work only
Alabama
stations. Stations may be worked once per band per mode.
Mobiles may be
worked again if they change counties. No repeater contacts
allowed.
Repeaters may not be used to solicit contacts during the contest
period.
Packet QSOs must be direct and have a licensed operator at both
stations
(i.e. no robots). No contacts may be made on the WARC bands
(10, 18, and
24 MHz). No cross-band contacts are allowed. Use of non-amateur
means to
solicit contacts during the contest period is not allowed.
5. Operating categories:

Alabama
Single-Operator
Multi-Operator
QRP (<5 watts PEP)
Mobile

Out-of-state
Single-Operator
Multi-Operator
QRP (<5 watts PEP)
6. Suggested frequencies:

CW: 1.815, 3.540, 7.040, 14.040, 21.040, 28.040
SSB: 1.855, 3.965, 7.240, 14.280, 21.390, 28.390
Novice/Tech: 3.700, 7.130, 21.140, 28.140, 28.390
VHF/UHF: 50.130, 52.525, 144.200, 146.550, 446.000
Contacts may be made on any band except for the WARC bands
(30, 17,
and 12 meters).
7. Scoring:

One (1) point per QSO on voice, two (2) points per contact on
CW or
digital modes. Multipliers are the Alabama counties (67 total).
For
Alabama stations only, add U.S. states, Canadian
provinces/territories,
and DXCC countries. Stations mobile in Alabama may claim 100
bonus points
for each Alabama county from which they complete at least one
valid QSO.
8. Logs:
Indicate band/mode, time, call worked, and QTH (must include
Alabama
county). Mark new multipliers. If you make more than 100 QSOs,
please
provide a dupe sheet. Mobiles must indicate when they change
counties.
Include a summary sheet showing county, QSO points, multipliers,
and final
score. Computer logs will be accepted on MS-DOS formatted floppy
disks
(3.5" only). Please label disks with your callsign and address.
Logs must
be in ASCII text format (CT's .ALL, TR's .LOG, plain .TXT, etc.)
and
should include a summary file. E-mailed logs are preferred.
Email logs
to kt4xa@mindspring.com. Send paper logs to:
ALABAMA HEART OF DIXIE QSO PARTY
CHRISTOPHER S. ARTHUR, KT4XA
606 UNDERWOOD RD
RUSSELLVILLE AL 35654-8123
Logs must be postmarked by October 25, 2000.
9. Awards:
Certificates will be issued to the top three Alabama and out-
of-state

single operators, top Alabama and out-of-state multi-op, and top
Alabama
and out-of-state QRP station (ten total awards).

1064. Ebay and the sale of illegal amplifiers

Newsgroup: rec.radio.amateur.misc
Date: 2000-09-22 00:00:00 UTC
From: Floyd Sense <sentek@sprintmail.com>
Message-ID: <v6My5.15980$ks.624559@newsread1.prod.itd.earthlink.net>
Source record: 102937

While looking to see if there were any linear amps currently for sale on ebay, I did a search on "linear amplifiers". Of the 32 results, 7 were clearly illegal amplifiers built for use by CBers. Some of the remaining items were questionable, but there was no doubt about these 7. A note to the eBay Community Watch brought the answer that they were not responsible and could not rely on the word of a third party regarding the legality of such items. They suggested I contact the FCC. Good idea - I sent the information to Riley Hollingsworth at the FCC. If you have any feelings on this subject yourself, do the same search and send a note to both ebay and Mr. Hollingsworth (rholling@fcc.gov) .

It's a bit of an absurdity that as a licensed ham I can't buy an amplifier that operates on 10 meters, but, as an unlicensed ebay user, I can choose from a variety of amplifiers that operate just fine on 11 meters. If you feel the same way, please let ebay and the FCC know.

That's not true...a public official MUST disclose the item and it's worth
and that is all that is necessary to do. Presents/Gifts between heads of
state are commonplace as are lesser gifts to lesser officials. Nothing
wrong with any of it as long as the gift is documented.

Let me guess... You're either an hourly wage earner or else on welfare,
right?

From this republican: Go to college, study your brains out day and
night to get good grades, show your best at job interviews so you'll
land a high-paying job, and pay your taxes as a contributing member
of society. But please don't be a leach, demanding that society
should baby-sit you due to your inadequacies, real or imagined.

Have a nice weekend.

> and above the authority of the fed.

Sorry. Read the Tenth Amendment again. It is interpreted as any right or authority that was not reserved to the Federal Government is reserved to the States and/or the people. In other words, where the Constitution or [valid] federal law is silent on an issue, the States or the people have the right and ability to make law on such.

Here, the FCC has effectively "reserved" its authority (as part of the Federal Government) by having made a determination on the issue. Only if the FCC had indicated that it was an issue of state or local law would you even come close to being correct.

Under your interpretation, suppose Indiana were to outlaw U.S. Amateur Radio Licenses. Just what would you claim then? If you say that they can't do that, there's proof that your statement above is incorrect. ...And if you say that you can, I'll let my relative who's in my state's legislature introduce a bill which outlaws it in your state - which you must then accept under the Constitution's Article 4, section 1 ("Full faith and credit" clause).

I'm not certain what your point is. Are you bitching about the amps being used on 11m, or the UNAVAILABILITY of amps for 10m? Why not just simply buy one of the 11m amps and tweak it back to 10m? The rules do allow an amateur to use an amp on 10m.

Also remember that simple possession of an 11m amp isn't illegal. USE of it is. Additionally, remember the transitional rules, with the manufacturing cut-off date? Did you inquire to see if any of these amplifiers were actually aged to the point where they could have been grandfathered? I see no mention of such an inquiry (although, I agree that a 25+ year amp would be more of a "speciality item").

Howard,

I WAS republican -- until Bob Dole (from presidential candidate to Viagro salesman -- he really needed a BACK stiffener!), along with other republicans helped to push through NAFTA, GATT, and the "Brady Bill". At that point I cut up my card, returned all contribution requests with a terse note and started looking at independents.

A vote for the lesser of two evils is a vote FOR EVIL! As long as the republicans act like democrats I suggest we abandon them both.

Al

What, pray tell, is wrong with being an hourly wage earner?
I went to college and now work in the medical business,
Odd thing, they pay me by the hour,
and quite well.
oh, I'm a liberal democrat, as well.
I hate to point this out, but as long as some one is earning an
honest living, who cares what he does?
Thats it, you all make me puke,
im sick of this "my race is better than yours, my job is better than
yours" crap. any one think that maybe were not the only ones on this
planet, that there are people dieing right now because we are too fat
and lazy to even try to help?
we dont care about anyone or anything other than ourselves, and most
of the time, we're too busy playing with our toys to even care to much
about that.
I love shortwave, it brings me closer to the rest of my people.
and what race are my people you ask?
THE HUMAN RACE.

Source record: 102953

2000 Fall Classic (and homebrew) Radio Exchange

1900z Sept 24 to 0400z Sep 25.

Exchange name, RST QTH (state, province or country), and receiver and transmitter type (if homebrew,
send final amp tube or transistor type).

The same station may be worked with different equipment combinations on each bandand on each mode.

On CW call "CQ CX;" on phone call "CQ Classic Exchange."

Non-participants may be worked for credit.

Suggested frequencies:

CW---3.545, 7.045, 14.045, 21,135, 28.180.

Novice/Tech---3.695, 7.120, 21.135, 28.180.

Phone---3.880, 7.290, 14.280, 21.380, 28.320.

Scoring:

Multiply total QSO's (all bands) by total number of different receivers plus transmitters (transceivers count
as both), plus states/provinces/countries worked on each band and mode.

Multiply that total by your CX multiplier-- the total age (in years) of all receivers and transmitters used,
three QSO's minimum per unit.

For transceiver, multiply age by two. If equipment is homebrew, count it as a minimum of 25 years old
unless actual construction date or date of its construction article (in the case of a "reproduction") is older.

And if I thought police were stopping all blacks just because they were black, I'd be screaming against profiling also. But, I don't really think that (race) is the sole thing looked at. I'm sure other factors are also used.

For example, in a vehicle, the officer might look at the age of the occupants, visible clothing, visible signs of gang affiliation, type of car (rental, for example), number of occupants, where the vehicle appears to be coming from, where the vehicle appears to be going, and so forth. Or, on an arriving flight, the officer might look at the age of the person, clothing, visible signs of gang affiliation, where the flight came from, where the flight is going, and so forth.

In fact, I know for a fact that blacks are not the only ones stopped. Many years ago I was stopped, and my vehicle searched, by border patrol agents when we arrived back from a vacation in Canada. Of course, back then I fit the typical image (profile) of a person who might have drugs in the vehicle - long hair, hippy-style clothing, an older car (not the typical vacation vehicle, but I only lived a few miles from the border), and so forth. Since we didn't have much luggage in the vehicle, the search took about five minutes and we were on the road again.

And I didn't get angry at the officer either. Heck, my mother even thought I was using drugs - so it was not really surprising the officer thought the same thing.

Want to learn more about the candidates stances on issues? Listen to shortwave radio stations from countries outside the US. All we seem to get here from the mass media is rhetoric.

Jeffrey Herman wrote in message <8qgai1$lb3$1@news.hawaii.edu>...

1085. Car Antenna Question

Newsgroup: rec.radio.amateur.misc
Date: 2000-09-22 00:00:00 UTC
From: Zach <zbabayco@spamless.oz-online.net>
Message-ID: <0pbosskqqilofuh00c907fa19vt4sbefdp@4ax.com>
Source record: 102958
Cross-posted to: rec.radio.amateur,rec.radio.amateur.misc,alt.ham-radio.vhf-uhf

What's the best way to run an antenna cable from the roof of my car to the inside? Right now, I have the cable running through the door, between the frame of the car and the door. The door has a little but of padding, but I don't know how much that will help with protecting the cable. I checked out the cable after running it, and it seems OK, but I don't know how long it will hold up, even though I don't use that door that often. Is there a different way to run it, or should I use some sort of padding on it?

Thanks!

Zach Babayco, KC0IUX

Yes, I do know that Christmas is months away. However, it is my only holiday. I love it. Thus, CSRO is celebrating it from the moment you read this, until the next millenium, the 21st century, 2001.
Starting on thanksgiving we are going to be broadcasting christmas episodes of your favorite shows. We have been working on this all year, and have a lot of xmas stuff to play on the station. So, as something that means a lot to me, we have put something on the site for you to download to get in the christmas spirit, in other worlds, "Lee Allens, Letter From Michael"
We have posted this on the site for you to download. I have no idea how to upload to the newsgroups, so I posted it on our homepage for you to download this christmas classic. If you are not familiar with it, please, listen, it is something wonderful. I don't know if they play it in any other place besides the great lakes region, but this xmas letter is my favorite of all time. So know this, CSRO is getting ready for christmas, and with this letter, read by Lee Allen, you can download it here :
http://www.phoesho.com/csro2/

I hope you enjoy it, and look forward to Christmas 2000 with CSRO.

Love Adora

I have no problem with fishing where the fish are, that's what I pay them
for. But in the end of things a profile, like a medical test, is judged by
its false positives and negatives. Certainly membership in a recognizable

group is a factor. Stopping all blacks, however, more in the interest of real estate values than drugs, is a pretty shitty profile.

You have used the word "hi" or "HI HI" in an inappropiate way.
HI HI is properly uses on CW (code) to indicate something funny. In text
you can say "ha ha" and of course on voice you would sound like an idiot
if you say "HI HI."

Your punishment is to say 5 lines of HI HI, text follows:

HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI
HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI HI

Please visit my World Wide Web Site, you have never seen a page like it. You
will see:

1. Access to oldies mp3 (albeit on an irregular basis)
2. Really interesting answering machine messages
3. A blond naked chick with really big knockers
4. A guide to the best ham pages ever.
5. Hear Ted Kennedy really screw up in front of Clinton
6. Actually sounds of Bill Clinton "after the lov'in". 7. The writings of me
and others on ham radio, hear a typical ham contact. 8. The warm side of
K1OIK, hear me speak, see me with famous people. 9. An amazing card game
that will shock others
10. Pictures of me and my family.
11. Did common German's enable the holocaust?

THose old Transoceanics were quite good for their day. And as a collector item worthy of investment. But for daily listening, do investigate the latest offerings from Drake, Sangean, Grundig, Palstar etc. While every kind has it's foibles and good points the newest models make tuning in so much more easy!

Source record: 103013

On September 21, 2000, Kevin@rollerskate.net stated:

Hi Ron,

And I thought I had seen it all! EVERY ham, regardless of their ethnicity, should be upset.

As we both know, AA is needed in Ham Radio about as much as I need to be hit by a train. If we as hams REALLY need this, then how did I obtain my EXTRA class license in the 70s, before ANY of the standards were lowered?

This AA thought process is strange, at best. I wonder why the author would suggest such an outrageous idea. Most, if not all of the potential amateur radio ops I know, and that are minorities, would be insulted by the mere suggestion. Besides, if the FCC were to lower the standards any further, we might as well have no tests at all!

BTW: My 11 year old daughter has been a ham for almost a year, receiving her ticket when she was only 10. I wonder how she did that without the benefit of the below suggested AA for minorities? Perhaps she studied??? WOW, what a novel idea!

Kevin Williams NI8H/6
Kevin@rollerskate.net
>>

Kevin,

With all due respect, I totally disagree with your argument and its reasoning. You should be very proud of your 11 year old daughter for getting her ticket. I have no doubt that both of you worked very hard for her to attain it; and both of your efforts proved successful. Your scenario makes my best argument. Now, think about the African-Americans in our society, whose ancestors were uprooted from Africa, where they were killed, tortured, turned into slaves, and made the property of white Americans. Think about how they were torn from their familles (especially after they were here as slaves), how they had their culture, language, family, and assets stripped from them. As a result of this, our country's greatest tragedy, generation after generation has been born into poverty, drugs, crime, teenage moms, and single family households. Because of what white America has done in the past and present, African Americans don't have a "fair" chance. If your 11 year old has an African American in her class at school, statistics show that she's probably poor, comes from a single parent family, and has a father who is absent in her life (and probably has had a run-in with the law at some point in his life). As further result of the tragedy set forth upon her by white America, she's probably far behind your daughter in her schooling. In fact, due to white America's actions for the last 300 or so years, many African Americans children have understandably

reacted to the plight bestowed upon them by being afraid to "act white" and study, which subjects them to further injustices. Our obligation is to make all African Americans feel good about themselves and not feel any sense of failure. Just think about all that your 11 year old could gain if more African American children could get there licenses with a scaled back, "neutral" exams which would require only, for instance that they know the frequencies they should be on. (No element 1 and a scaled back element 2). Hopefully, in time they would learn our hobby "on the job" and teach and enjoy it with future generations. I have received several emails asking if I would go to a doctor who hadn't passed a standard medical board exam, or want to be on a plane with a pilot who wasn't tested for flying. I think the tragedies possible when chatting on a microphone about the weather and what kind of rig one has seems to me a lot less worrisome than medicine or flying...it's only rag-chewing folks...what's the big deal???

1103. RF and HV components and much much more

A friend has set up a web site for me to sell off a 28 year accumulation
of electronic components including:

Coaxial Power switch,
RF power and other transistors, RF I.C.'s,
Minicircuits mixers, ceramic 455kHz and 460kHz filters,

variable capacitors, both panel mount shaft type and trimmer
variable inductors and coil forms, RF feedthrough and standoff capacitors,

High voltage: VACUUM RELAYS, RECTIFIERS, resistors and capacitors,

Other capacitors including, Photoflash, polypropylenes, tantulums,

Switches, such as foot switches and industrial limit (micro) switches,

Ferrites cores, Transformers and inductors,

Transistors for power audio amplifiers and television deflection,
Super fast (35ns) 1 and 3 amp rectifiers, and lots, lots more.

I agree with you, cops (like most people) are lazy and will do whatever works with the least amount of effort And that is why profiling is so popular - it is easy and it works.

In other words, when an officer stops a black person using the present profile qualifications, drugs are usually found in a great majority of cases. If that was not the case, cops would have switched to another system years ago.

Of course, you're not going to hear that from those opposed to profiling. They will never admit that the system works - that drugs are found in a great majority of cases. Instead, these people want you to think that a bunch of innocent people are being harassed.

And, of course, some of those objecting are simply drug dealers who want the cops to leave them alone so they can do their illegal activities, drug users opposed to any anti-drug law enforcement, or politicians from minority neighborhoods who need the drug money to finance their campaigns.

No, that dog won't hunt.

if you are posting from the @home system, then why have several of your
more recent posts originated from an AOL IP?

It costs about.00/month for @home service 9at least here it does) and AOL
charges about $26.00/month... personally, I find it rather puzzling that
you would
expend so much effort to mask your location (as well as gobs of money you
obviously have more of than good sense).

Hell, I already posted headers from you when you first reappeared SHOWING
the actual IP info of your posting host (and a traceroute/whois revealed
the
domain to which that belonged).

You might as well quit while you are ahead, John.
You've lost and you know it.
Continued harassssment on this point will result in many emails
to whatever provider you are currently using.

>Loops seem to do a good job at rejecting power line noise.
>Verticals are the worst!

The "gender" of the antenna makes no difference. The directional
characteristics do.

Any antenna that has poor response in the directon of the noise source
will reduce the noise. The "most quiet" receiving antennas I have are
directional arrays of verticals because they have a sharp resonse lobe
I can focus away from noise sources.

The problem with big power lines is you can be totally "stuck" not
being able to hear weak signals in the direction of the power line if
they "act up", which they often do.

Eric - My post to you asks you "what type of antennas do you use", and your reply is all this off-topic CRAP. ONCE AGAIN, I ask you "what type of antennas do you use"?

BTW - You are wrong about my service provider, the LAST SEVERAL messages I have posted here came from the @home system. When I am on the road traveling
I use what ever service provider I can access easily which could be AOL or any other.

Now, are you willing to talk about antennas or do you want to continue your off-topic activities?

What type of antennas do you use?

It is easy to tell that you have never worked on an antenna testing range. You make a rather strong statement with not much to back it up. Over the years and the numerous testing that I have been involved with goes against your strong stand. I agree that the glass mounts are not 100 percent transferring the energy to the antenna. They are however rather good. In comparing them with a roof mounted antenna at 800 Mhz., there is not that much difference between them. As the frequency comes down, the coupling becomes more of a problem. You need to have the correct model to use at the VHF band. Don't go out and buy a cheap window mount.

Not true Jim, I have been working with antennas for many years. Even the cheapest quality Magnetic mount on 144/440 band will run circles around ANY glass mount. If you look at the coupling (or lack of it) thru a 1/8 inch thick piece of glass(and considering its NOT tinted) you would see what I am talking about. While what your saying may hold true at 28Mhz (coupling) is way too lossy at VHF/UHF frequencies.
If this antenna is being used on a scanner one could probably accept the losses, but for transmitting I will go with the magmount everytime. The magmount provides a good ground at 144/440 but I wouldn't use one below 52Mhz.
What it all boils down to Jim is this....ALL glass mounts are lossy, some more than others. And a magmount will outperform ALL of them at 144/440 each and every time. A magmount is less expensive and re-useable, the glass mount was never designed to be re-used. The real antenna to use is of course is the body mounted style, with a 1/4 wave for the hilly areas (high angle of radiation) for places like Los Angeles and the "gain" style antennas for the flat lands like Texas. If you really work at an antenna testing range or chamber you already know this....Eddie

From: Michael Blake <k9jri@yahoo.com>
Message-ID: <8qj9pqqoh1@nnrp1.deja.com>
Source record: 102898

I am looking for anyone that has been able to get at the data output from the automobile's built in GPS receiver in any car using the Motorola Telematics equipment. I believe that the Infinity, Cadillac, Mercedes Benz and Ford use Motorola's equipment.

Rather than using a separate GPS receiver and external antenna for APRS and other mapping projects I would like to be able to tap the data output from the built in stuff. From what I have read it is standard NEMA format and should only require an OP-Amp buffer to prevent loading the existing emergency reporting systems.

Just get your group to fake some more tapes Dan. It's just perjury. Or get them to harass some more people on the Internet, as they are currently doing right now. Someone could get rich selling som self-esteem to those jerks. First of all, the Stumpjumpers have disbanded. Second of all, every one of them has tried to make peace with you jerks. But your idiotic clique continues the same old childish crap. You are the problem Dan. You and your perjuring little buddys. But I've got some news for you and your little low-esteem bunch of dysfunctional harassing lay abouts. When you and your moronic buddies finally get nailed for the illegal crap you have been up to, i.e. perjury, mail fraud, libel, terroristic threats, and the like, this pack of idiots is not only going to lose their tickets instantly, but

they are going to get a prison door slammed in their face as well. You can get in here and lie like a rug, but your group is continuing to deepen their hole, and myself and others are constantly digging up more evidence to put these idiots away. So make sure you forward this on e-mail to everyone of the no-esteem jerks you seem to want to defend all the time. You can all go down together.

Boy Dan, you are turning into a pathological liar now. Who did Riley nail to the wall? I think you better start checking the database Dan. And all the idiots in your group are jamming just like they used to, they just stopped identifying. If your going to lie Dan, try to at least make it believable.

Yep, now that's the same hate that Jeswald has spewed across the bands for years. Dan, you have lied in the last 10 posts you have made. YOUR credibility is skewed old man. Adjust your meds and get on the Internet to plan more harassment with your stupid pack of low-esteem idiots like N4CND, K1TP, and your moron buddy in Powder Springs. I think if your scour the bands you and your dysfunctional jamming crew can recruit so more naive dolts to lead by the nose like K1TP. I bet he has been jamming the "problem" frequencies for years. Qrm and harass on, you lying dysfunctional jerk.

Eddie, aren't you getting it backwards? It's my impression that a through-the-glass antenna mount works better at higher frequencies than at lower frequencies. All cellphone antennas, for example, are throught-the-glass mounts... and they work fine at their UHF freqs.

I read all your comments above Jimmy O, and I wasn't going to bother answering, but since you decided to attack I thought Id give you something to attack about.

You call me 'dysfunctional jerk'....just how is that oh PTSD sufferer from the fan tail weather balloon boy? GIve me a flippin break Jimmy.

As for the 'stumpers' being dis-banded....Good deal. Makes it harder for Riley now, eh?

Who in you group got popped?????? Do you really want me to put that out? Sure, we know Riley didn't, but he put you all over the net...how cum that was oh great one?

And since the group has been disbanded....why the hotel do you care what is said about them?

In the first place dimwit you are the one with all the FCC letters about jamming. Take credit where credit is due.

As for ones in "my" group....I could care less. I know I'm not jamming, and if they are...then they are stupid and deserve what they get.

See you in the contests Jimmy.

I only need one reason to vote for Al Gore. His name is George W. I have no idea where you might be living or your level of knowledge of Bush's past, but here in Texas, yes he was elected governor, but he manages to keep his mouth shut to avoid offending folks. Since reconstruction, the governor's job has been at best a figurehead. No power to do much of anything. He can't even stop a prisoner execution for more than 30 days, and has no power to pardon. The lieutenant governor runs the Texas legislature, and that is where the action is in this state. Bush claims to have infused public education with the spirit, but it continues to head towards the potty. Accountability testing has turned into 'teaching the test' and now he's proposed the same for the state's universities. You folks out there will eventually figure out that Bush is at best a dull mind.

Message:

READING THIS COULD CHANGE YOUR LIFE! I found this=20
on a=20
bulletin board and decided to try it. A little while back, I was =
browsing=20
through newsgroups, just like you are now, and came across an article=20
similar to this that said you could make thousands of dollars within=20
weeks with only an initial investment of $6.00! So I thought, "Yeah=20
right, this must be a scam", but like most of us, I was curious, so I =
kept=20
reading. Anyway, it said that you send $1.00 to each of the 6 names=20
and address stated in the article. You then place your own name and=20
address in the bottom of the list at #6, and post the article in at =
least=20
200 newsgroups. (There are thousands) No catch, that was it. So after=20
thinking it over, and talking to a few people first, I thought about =
trying=20
it. I figured: "what have I got to lose except 6 stamps and $6.00, =
right?"=20
Then I invested the measly $6.00. Well GUESS WHAT!!...within 7=20
days, I started getting money in the mail! I was shocked! I figured it=20
would end soon, but the money just kept coming in. In my first week, I=20
made about $25.00. By the end of the second week I had made a total=20
of over $1,000.00! In the third week I had over $10,000.00 and it's =
still
growing. This is now my fourth week and I have made a total of just=20
over $42,000.00 and it still coming in rapidly. It's certainly worth=20
$6.00, & 6 stamps, I have spent more than that on the lottery!! Let me=20
tell you how=20
this works and most importantly, why it works....Also, make sure you=20
print a copy of this article NOW, so you can get the information off of=20
it as you need it. I promise you that if you follow the directions =
exactly,=20
```

that you will start making more money than you thought possible by=20
doing something so easy! Suggestion: Read this entire message=20
carefully! (print it out or download it.) Follow the simple directions =
and=20
watch the money come in! It's easy. It's legal. And, your investment is=20
only $6.00 (Plus postage) IMPORTANT:=20
This is not a rip-off; it is not indecent; it is not illegal; and it is =
virtually=20
no risk - it really works!!!! If all of the following instructions are=20
adhered to, you will
receive extraordinary dividends. PLEASE NOTE: Please follow these
directions EXACTLY, and $50,000 or more can be yours in 20 to 60=20
days. This program remains successful because of the honesty and=20
integrity of the participants. Please continue its success by carefully=20
adhering to the instructions. You will now become part of the Mail=20
Order business. In this business your product is not solid and tangible, =

it's a service. You=20
are in the business of developing Mailing Lists. Many large=20
corporations are happy to pay big bucks for quality lists. However,=20
the money made from the
mailing lists is secondary to the income which is made from people=20
like you and me asking to be included in that list. Here are the 4 easy=20
steps to success: STEP 1: Get 6 separate pieces of paper and write the=20
following on each piece of paper "PLEASE PUT ME ON YOUR=20
MAILING LIST." Now get 6 US $1.00 bills and place ONE inside=20
EACH of the 6 pieces of paper so the bill will not be seen through the=20
envelope (to prevent thievery). Next, place one paper in each of the 6=20
envelopes and seal them. You should now have 6 sealed envelopes,=20
each with a piece of paper stating the above phrase, your name and=20
address, and a $1.00 bill. What you are doing is creating a service.=20
THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate=20
service and you are paying for it! Like most of us I was a little=20
skeptical and a little worried about the legal aspects of it all. So I=20
checked it out with the U.S. Post Office (1-800-725-2161) and they=20
confirmed that it is indeed legal! Mail the 6 envelopes to the following =

addresses:

#1) Samantha Blizniak, 7937 S. Newcastle, Burbank, IL 60459

#2)Katie Wiess, 14 White Tail Lane, Wallingford, CT 06492

#3)Traci Wood, 4224 Carnwath Rd., Tallahassee, FL 32303

#4)Milissa Crook, 3730 South 255th Place, Kent, WA 98032

#5)James Buckner, 11903 Coit RD. #1803 Dallas, TX 75251

#6)Bobbi Mullins, 31 Sunnydale Lane, Napoleon, OH 43545

STEP 2: Now take the #1 name off the list that you see above, move=20
the other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR=20

Name as number 6 on the list. STEP 3: Change anything you need to,=20
but try to keep this article as close to original as possible. Now, post =

your amended article to at least 200 newsgroups. (I think there are=20
close to 24,000 groups) All you need is 200, but remember, the more=20
you post, the more money you make! This is perfectly legal! If you=20
have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal=20
lottery laws. Keep a copy of these steps for yourself and, whenever=20
you need money, you can use it again, and again. PLEASE
REMEMBER that this program remains successful because of the=20
honesty & integrity of the participants & by their carefully adhering to =

the directions. Look at it this way. If you are of integrity, the =
program=20
will continue and the money that so many others have received will=20
come your way. NOTE: You may want to retain every name and=20
address sent to you, either on a computer or hard copy and keep the=20
notes people send you. This VERIFIES that you are truly providing a=20
service. (Also, it might be a good idea to wrap the $1 bill in dark =
paper=20
to reduce the risk of mail theft.) So, as each post is downloaded and =
the=20
directions carefully followed, six members will be reimbursed for their=20
participation as a List Developer with one dollar each. Your name will=20
move up the list geometrically so that when your name reaches the #1=20
position you will be receiving thousands of dollars in CASH!!! What an=20
opportunity for only $6.00 ($1.00 for each of the first six=20
people listed above) Send it now, add your own name to the list and=20
you're in business!=20
---DIRECTIONS -----=20
FOR HOW TO POST TO NEWSGROUPS----------=20
Step 1) You do not need to re-type this entire letter to do your own=20
posting. Simply put your cursor at the beginning of this letter and drag =

your cursor to the bottom of this document, and select 'copy' from the=20
edit menu. This will copy the entire letter into the computer's memory.
Step 2) Open a blank 'notepad' file and place your cursor at the top of=20
the blank page. From the 'edit' menu select 'paste'. This will paste a=20
copy of the letter into notepad so that you can add your name to the
list.=20
Step 3) Save your new notepad file as a .txt file. If you want to do =
your=20
postings in different settings, you'll always have this file to go back =
to.=20
Step 4) Use Netscape or Internet explorer and try searching for various=20
newsgroups (on-line forums, message boards, chat sites, discussions.)
Step 5) Visit these message boards and post this article as a new=20
message by highlighting the text of this letter and selecting paste from =

the edit menu. Fill in the Subject, this will be the header that =
everyone=20

sees as they scroll through the list of postings in a particular group,
click the post message button. You're done with your first one!
Congratulations...THAT'S IT! All you have to do is jump to different=20
newsgroups and post away, after you get the hang of it, it will take=20
about 30 seconds for each newsgroup! **REMEMBER, THE MORE=20
NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL=20
MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200** That's=20
it! You will begin receiving money from around the world within days!=20
You may eventually want to rent a P.O.Box due to the large amount of=20
mail you will receive. If you wish to stay anonymous, you can invent a=20
name to use, as long as the postman will deliver it. **JUST MAKE
SURE ALL THE ADDRESSES ARE=20
CORRECT.** Now the WHY part: Out of 200 postings, say I receive=20
only 5 replies (a very low example). So then I made $5.00 with my
name at #6 on the letter. Now, each of the 5 persons who just sent me=20
$1.00 make the MINIMUM 200 postings, each with my name at #5=20
and only 5 persons respond to each of the original 5, that is another=20
$25.00 for me, now those 25 each make 200 MINIMUM posts with=20
my name at #4 and only 5 replies each, I will bring in an additional=20
$125.00! Now, those 125 persons turn around and post the MINIMUM=20
200 with my name at #3 and only receive 5 replies each, I will make an=20
additional $626.00! OK, now here is the fun part, each of those 625=20
persons post a MINIMUM 200 letters with my name at #2 and they=20
each only receive 5 replies, that just made me $3,125.00!!!=20
Those 3,125 persons will all deliver this message to 200 newsgroups
with my name at #1 and if still 5 persons per 200 newsgroups react I=20
will receive $15,625,00! With an original investment of only $6.00!=20
AMAZING! When your name is no longer on the list, you just take the=20
latest posting in the newsgroups, and send out another $6.00 to names=20
on the list, putting your name at number 6 again. And start posting=20
again. The thing to remember is: do you realize that thousands of=20
people all over the world are joining the internet and reading these
articles everyday?, JUST LIKE YOU are now!! So, can you afford
$6.00 and see if it really works?? I think so... People have said, "what
if the plan is played out and no one sends you the money? So what!
What are the chances of that happening when there are tons of new
honest users and new honest people who are joining the internet and
newsgroups everyday and are willing to give it a try? Estimates are at=20
20,000 to 50,000 new users, every day, with thousands of those
joining the actual internet.Remember, play FAIRLY and HONESTLY
and this will really work

------=_NextPart_000_0005_01C02598.BAA36120

charset="iso-8859-1"

THIS REALLY WORKS!!!!!!!!!!! (9/6/00 04:40 PM=20
EDT)
Email:=20
bmullins@henry-net.com
Date:=20

9/222/00
Time: =
6:35p.m.

Message:

READING THIS=20
COULD CHANGE YOUR LIFE! I found this
on a=20

bulletin board and decided to try =
it. A=20
little while back, I was browsing
through=20
newsgroups, just like you are now, and came across an article =

similar to this that said you could make thousands =
of dollars=20
within
weeks with only an initial =
investment=20
of $6.00! So I thought, "Yeah
right, this=20
must be a scam", but like most of us, I was curious, so I kept =

reading. Anyway, it said that you send $1.00 to =
each of the 6=20
names
and address stated in the =
article. You=20
then place your own name and
address in the=20
bottom of the list at #6, and post the article in at least =

200 newsgroups. (There are thousands) No catch, =
that was it.=20
So after
thinking it over, and =
talking to a=20
few people first, I thought about trying
it.=20
I figured: "what have I got to lose except 6 stamps and $6.00, right?"=20

Then I invested the measly $6.00. =
Well GUESS=20
WHAT!!...within 7
days, I started =
getting=20
money in the mail! I was shocked! I figured it
would end soon, but the money just kept coming in. In my first =
week, I=20

made about $25.00. By the end of =
the second=20
week I had made a total
of over =
$1,000.00! In=20
the third week I had over $10,000.00 and it's still
growing. This is now my fourth week and I have made a total of =
just=20

over $42,000.00 and it still =
coming in=20
rapidly. It's certainly worth
$6.00, & 6=20
stamps, I have spent more than that on the lottery!! Let me =

tell you how
this works and=20
most importantly, why it works....Also, make sure you
print a copy of this article NOW, so you can get =
the=20
information off of
it as you need =
it. I=20
promise you that if you follow the directions exactly,
that you will start making more money than you =
thought=20
possible by
doing something so =
easy!=20
Suggestion: Read this entire message
carefully! (print it out or download it.) Follow the simple =
directions=20
and
watch the money come in! It's =
easy. It's=20
legal. And, your investment is
only $6.00=20
(Plus postage) IMPORTANT:
This is =
not a=20
rip-off; it is not indecent; it is not illegal; and it is virtually=20

no risk - it really works!!!! If =
all of the=20
following instructions are
adhered to, you=20
will
receive extraordinary =
dividends. PLEASE=20
NOTE: Please follow these
directions EXACTLY,=20
and $50,000 or more can be yours in 20 to 60

days. This program remains successful because of the honesty =
and=20

integrity of the participants. =
Please=20
continue its success by carefully
adhering to=20
the instructions. You will now become part of the Mail
Order business. In this business your product is =
not solid and=20
tangible,
it's a service. You=20

are in the business of developing =
Mailing=20
Lists. Many large
corporations =
are happy to=20
pay big bucks for quality lists. However,
the=20
money made from the
mailing lists =
is secondary=20
to the income which is made from people
like=20
you and me asking to be included in that list. Here are the 4 easy=20

steps to success: STEP 1: Get 6 =
separate=20
pieces of paper and write the
following on=20
each piece of paper "PLEASE PUT ME ON YOUR
MAILING LIST." Now get 6 US $1.00 bills and place ONE inside=20

EACH of the 6 pieces of paper so =
the bill=20
will not be seen through the
envelope (to=20
prevent thievery). Next, place one paper in each of the 6 =

envelopes and seal them. You should now have 6 =
sealed=20
envelopes,
each with a piece of =
paper stating=20
the above phrase, your name and
address, and=20
a $1.00 bill. What you are doing is creating a service.
THIS IS ABSOLUTELY LEGAL! You are requesting a =
legitimate=20

service and you are paying for =
it! Like most=20
of us I was a little
skeptical =
and a little=20
worried about the legal aspects of it all. So I
checked it out with the U.S. Post Office (1-800-725-2161) and =
they=20

confirmed that it is indeed =
legal! Mail the 6=20
envelopes to the following
addresses:

#1) =
Samantha Blizniak,=20
7937 S. Newcastle, Burbank, IL 60459

#2)Katie Wiess, 14 White Tail Lane, Wallingford, CT=20
06492

#3)Traci Wood, 4224 =
Carnwath Rd.,=20
Tallahassee, FL 32303

#4)Milissa Crook, 3730 South 255th =
Place, Kent,=20
WA 98032

#5)James Buckner, =
11903 Coit RD.=20
#1803 Dallas, TX 75251

#6)Bobbi Mullins, 31 Sunnydale Lane, Napoleon, OH =
43545

STEP 2: Now take the #1 name off the list that you =
see above,=20
move
the other names up (6 =
becomes 5, 5=20
becomes 4, etc...) and add YOUR
Name as=20
number 6 on the list. STEP 3: Change anything you need to, =

but try to keep this article as close to original =
as possible.=20
Now, post
your amended article to =
at least=20
200 newsgroups. (I think there are
close to=20
24,000 groups) All you need is 200, but remember, the more =

you post, the more money you make! This is =
perfectly legal! If=20
you
have any doubts, refer to =
Title 18 Sec.=20
1302 & 1341 of the Postal
lottery laws.=20
Keep a copy of these steps for yourself and, whenever
you need money, you can use it again, and again.=20
PLEASE
REMEMBER that this program =
remains=20
successful because of the
honesty =
&=20
integrity of the participants & by their carefully adhering to=20

the directions. Look at it this =
way. If you=20
are of integrity, the program
will continue=20
and the money that so many others have received will
come your way. NOTE: You may want to retain every name and=20

address sent to you, either on a =
computer or=20
hard copy and keep the
notes =
people send you.=20
This VERIFIES that you are truly providing a
service. (Also, it might be a good idea to wrap the $1 bill in =
dark paper=20

to reduce the risk of mail =
theft.) So, as=20
each post is downloaded and the
directions=20
carefully followed, six members will be reimbursed for their =

participation as a List Developer with one dollar =
each. Your=20
name will
move up the list =
geometrically so=20
that when your name reaches the #1
position=20
you will be receiving thousands of dollars in CASH!!! What an =

opportunity for only $6.00 ($1.00 for each of the =
first six=20

people listed above) Send it now, =
add your=20

own name to the list and
you're =
in business!=20

---DIRECTIONS ----- =

FOR HOW TO POST TO NEWSGROUPS---------- =

Step 1) You do not need to re-type this entire =
letter to do=20
your own
posting. Simply put your =
cursor at=20
the beginning of this letter and drag
your=20
cursor to the bottom of this document, and select 'copy' from the=20

edit menu. This will copy the =
entire letter=20
into the computer's memory.
Step =
2) Open a=20
blank 'notepad' file and place your cursor at the top of =

the blank page. From the 'edit' menu select =
'paste'. This will=20
paste a
copy of the letter into =
notepad so=20
that you can add your name to the
list.=20

Step 3) Save your new notepad =
file as a .txt=20
file. If you want to do your
postings in=20
different settings, you'll always have this file to go back to. =

Step 4) Use Netscape or Internet explorer and try =
searching=20
for various
newsgroups (on-line =
forums,=20
message boards, chat sites, discussions.)
Step=20
5) Visit these message boards and post this article as a new =

message by highlighting the text of this letter =
and selecting=20
paste from
the edit menu. Fill in =
the=20
Subject, this will be the header that everyone

sees as they scroll through the list of postings in a =
particular=20
group,
click the post message =
button. You're=20
done with your first one!
Congratulations...THAT'S IT! All you have to do is jump to =
different=20

newsgroups and post away, after =
you get the=20
hang of it, it will take
about 30 =
seconds for=20
each newsgroup! **REMEMBER, THE MORE
NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL =

MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200** =
That's=20

it! You will begin receiving =
money from=20
around the world within days!
You =
may=20
eventually want to rent a P.O.Box due to the large amount of =

mail you will receive. If you wish to stay =
anonymous, you can=20
invent a
name to use, as long as =
the postman=20
will deliver it. **JUST MAKE
SURE =
ALL THE=20
ADDRESSES ARE
CORRECT.** Now the =
WHY part:=20
Out of 200 postings, say I receive
only 5=20
replies (a very low example). So then I made $5.00 with =
my
name at #6 on the letter. Now, each of the 5 =
persons who just=20
sent me
$1.00 make the MINIMUM =
200 postings,=20
each with my name at #5
and only =
5 persons=20
respond to each of the original 5, that is another

$25.00 for me, now those 25 each make 200 MINIMUM posts with=20

my name at #4 and only 5 replies =
each, I will=20
bring in an additional
$125.00! =
Now, those=20
125 persons turn around and post the MINIMUM

> chamber you already know this....Eddie

See, the problem with your argument is that you will only accept an all or nothing approach (the best antenna or nothing). Yes, there are antennas that easily outperform a glass mount antenna, but that is NOT the only consideration.

With a newer vehicle, some people are not willing to accept the damage that a mag-mount will do (scratches from the mount, scratches from the coax as it flops around, leaks around the door seal where the coax enters, and eventual damage to the door seal). And, these same people are certainly not about to drill holes in their brand new vehicle.

Therefore, the glass mount, even with its slightly decreased performance, is a viable alternative. And, contrary to what you say, the performance difference is indeed slight. In fact, after installing the glass mount, I noticed no decrease in performance in everyday use (I was still able to reach everywhere I had reached with the mag-mount).

> anything. [snip]

Man, you're filled with self-importance. People are not supporting Bush for president because he was governor of Texas (you people are not that important). They support him because of what he is saying today, as opposed to what Al Gore is saying. In other words, the issue is not what he has done in Texas, but what he will do in Washington.

Doug,
That may be a nice conversation piece, but it isn't practical
to use anymore.
If you want to do SSTV and have a computer, you only need a
couple of cables and a program ($8.00 at Radio Shack if that).

It is strange, I guess they assume that people will not be using the amplifiers for use on C.B. but most people who bid on one probably will. About a year ago, the asshole that owns Copper Electronics here in Kentucky suggested in one of his columns that C.B.er's start making their way onto 10 Meters to chat with ham operators because the C.B. channels were becoming too crowded, so nothing surprises me anymore. As far as not being able to buy a linear amp that will work on 10 Meters, most manufactures will send you the instructions to modify the amp to run on 10, once you prove that you are indeed a licensed operator, although I'm sure it's not difficult for the average Joe to modify an amplifier to operate illegally, even with today's equipment.

If you are willing and able to, the best way is to drill a hole in the roof for a good roof mount, and run the coax down through the hole. Drop the headliner and route the cable from the mount over to a front window post, then down the inside of the post, and bring it out under the dash to the rig. Then replace the headliner, and you are in business with a clean, well grounded installation.

Well, Zach, the method you're using right now is the most common method used on newer vehicles. Of course, it has several disadvantages - the cable will eventually degrade due to friction from the door being used and the area around where the cable enters through the door will tend to leak slightly.

People with older cars often solve these problems by making a more permenant installation - they drill holes for the antenna.

I decided to compromise by adding a glass-mount antenna on the windshield instead. The advantages is that there is no coax to feed through the door, and none of the resulting problems. The disadvantage is slightly weaker performance. Of course, I'm only using a smaller VHF/UHF antenna to access the repeaters, so this works for me. However, this method would probably not work well for the larger antennas needed for HF work.

I recently picked up an old long persistance type SSTV monitor - the
Venus SS2. It's set up for the old 8.5 second B&W scan rate standard.
Can the horizontal and/or vertical sweep oscillators be slowed down
so that it can be used with later SSTV standard?

Doug

My house is within 500 feet of SEVERAL runs of VERY HIGH voltage lines.
(Three towers suspending the power distribution lines for central
Massachusetts.)

> I'm wondering what affects on the various HF or even VHF
> bands the power lines might have.

Corona due to weather conditions is the worst, I get S-9+10 db broadband noise.
(But noise blankers seem to reduce it very well!) I have not noticed any
effects on
VHF or UHF mostly because I only listen on FM.

> No these are are not so close that my
> antenna could ever touch. These are maybe 1/4 to 1/2 mile away... any

Loops seem to do a good job at rejecting power line noise.
Verticals are the worst!

KT4TR in very deep legal do-do, GFM, FX, MUJ all permanently gone. All of Herbie's sycophants are out of service, but what ever happen to WA2EXQ? He dropped Herbie like a hot potato when things turned sour. Of course EXQ never really bought into Herbie's shit and was not a fanatical Herbie sycophant. EXQ just liked agitating and causing confusion on 313.

New subject: Unidentified unlicensed stations have operated for years on 313. Hollingsworth will never bust any of them. He may bust one, if local hams locate the guy. the commission has neither the expertise, budget, time, or equipment any more to locate these guys. There's a CB op near me, who has operated for over a decade on 313 without a call sign. He's on for hours every day.

I've never owned one...probably one of the few I haven't played with. I read a review that claimed it's sensitivity was impaired in the 800MHz band, due to Yaesu's attempts to meet the government's demand for blocking cellular. They also blocked a little more than the cellular range, in the process. I know someone who owns an un-blocked unit, he purchased from Bandercom, and he's very satisfied with it, other than the fact it lacks trunking.

It seems there has been several of them up for sale, that claim to be only a couple weeks old too. Are users that unsatisfied, that quickly, or just trying to make them sound a little newer than they actually are?

It does have some attractive features, that can't be denied!

Great idea, been there, done that....didn't work....you know why it did not and will not work? Because common Joe or Jill HAM refuse to get involved. There all a bunch of gutless wonders.

Of course maybe we could crank up the renowned Stumpjumper e-mail campaign and pick out someone to attack. Who knows they might get lucky and actually catch a jammer/bootlegger.

The FCC can not and will not bother catching anyone not using a call. They have not done it yet and they never will. The ONLY person they caught Captain Truth was because of DIRECT monitoring by local amateur stations. Then the FCC (Riley) claimed credit. Yeah right.

So I'm basically telling you that it will continue as is.

Bob,

You know sometimes I just want to puke at some of the crap you come up with. Course that nothing new from you, is it?

When you were on 313 back then it was the heyday of the folks you tended to support, Herby and the boys. They were running rough shod on 300 and 313. Jamming the crap out of the intercon net and spreading hate and discontent everywhere they could. You left.

Riley shows up and nails them to the wall. It stops....from them. Then the 3rd element shows up, thats what has ALWAYS been there chidding us all and making it a funny farm frequency. There still there. Catch on Bob?

Everyone said OTK was bringing all these 3rd elements into the fray...Oh really....how come there still there and were there before OTK even showed up on 313??

I go way back in this thing Bob....long long before I ever said a word I was there.

If you read EBAy regularly, you will find new in the box, fresh manufacturer product for sale. These are clearly illegal. The number of D&A amps alone, an outfit that was raided by FCC, is a travesty.

I resent the enforcement actions of FCC against hams when these violations are so blatant.

Yes: It says that possession (without a license in another radio service where it can be used) is a PRESUMPTION OF USE. What it comes down to is that USE is the illegal act, not possession.

That's still evidence that the illegal act (of USE) has happened. Possession and use are different acts.

> >Go back to elementary school and learn how to read.
>
> Let's debate in a civil manner, now. Geting nasty is a sign you've
> become emotionally worked up. This is all supposed to be in fun.

Then why was I attacked in the first place when all I did was ask for clarification of the originator's point:

Was he bitching about the sale of 11m amps?
OR
Was he bitching about the UNAVAILABILITY of 10m amps?
OR both?
His post mentioned both topics.

That is all that I asked in my follow-up, and what do I get? A whole series of posts about "possession being illegal" which is NOT what the regulations state. Presumptions can be rebutted.

Thank you Mr. Bowers for your astute reply. In 1941 there was a book published in the states before Pearl Harbor happened. It was called, "You Can't Do Business with Hitler." Can we with Strom? Are they not cut from the same cloth? Remember when Adolf refused to shake Jesse Owens's hand after the famous American Negro astounded all in the Berlin 1936 Olympics? Der Fuehrer was afraid the brown would rub off. I wonder how Strom would react if he needed either a transfusion or an organ transplant from a man of color who was the ONLY medically approved donator? Would he rather die than accept? You bet your ass he'd accept and gratefully too. And after he regained health, he'd once again go preaching about the "danger" of the races of color. Strom is hopeless.

1187. Re: Combine the radio services?

Newsgroup: rec.radio.amateur.misc
Date: 2000-09-24 00:00:00 UTC
From: 2121d@gte.net
Message-ID: <39cdf0b5.3005307@news.gte.net>
Source record: 102838
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc,rec.radio.scanner,alt.radio.scanner,misc.survivalism

:>I see it going the other way. Getting rid of unlicensed CBers,
:>arresting the outlaws and making scanner and SWL listeners
:>get ham licenses.
:
:Scanners are NOT illegal anywhere in the USA EXCEPT
:for a handful of states that prohibit the use of scanners
:in an automobile.

It is not a handful of states. It is nearly 3/4 of all states have
limits to having scanners outside your home. You will find the laws
under the section of your state code dealing with the interferrence
with the duties of a police officer.

:>The cops are having big problems with drug runners using escort
:>vehicles with scanners and out of band CBs or VHF handhelds to
:>avoid the cops. The cops are afraid that the drug runners might get
:>ham licenses to avoid arrest for possession of illegal scanners.
:
:Two points:
:1. If the cops truly felt threatened then they'd be
:asking their state legislatures to enact anti-scanner
:laws everywhere. They are not doing that.
:2. There are NO illegal scanners. Anyone can own
:a scanner. The issue of use/possession of a scanner
:ONLY comes into play if the person using/possessing
:the scanner is in a motor vehicle in one of the few
:states that prohibit using a scanner in an auto.
:3. Only one state actually prohibits using a scanner
:anywhere else but in your home (Indiana?).

Read the cover article in Sept 2000 Popular Communications.
Michigan is making it very hard for race fans to have scanners
to listen to the drivers. The Mich. State Police are arresting racing
fans for have scanners in their possession without a ham license.

:>There is also the problem of foreign nationals using ham equipment
:>to communicate for purposes of spying.
:
:If that has any concern, it has been the case
:for 75 or more years.
:
:>If anything the cops want stricter laws, just as with guns. And code
:>isn't the answer as foreign nationals will be more likely to pass a
:>code test than US citizens. If anything the cops would like to see

:>ham radio, scanners, and CB radio banned. If the public can not
:>communicate then they can not rebel.
:
:True, but no laws of that nature are being proposed.

Actually there are laws in front of congress that would strictly
limit the civilian population's ability to listen to government
freguencies. As the police go to trunked digital radios, they
want it made illegal to make a scanner that can listen to trunked
radios or digital communications. What they are doing is making
the way that they digitize the voice information non public therefore
since it is not public, no one has the right to decode it (it would be
a violation of the laws dealing with encryption). Look at Strong
Signals web page (http://www.strongsignals.com). If you can not
find it, I will post the bill numbers (HR).

:>The UK is having the same types of laws against scanners (it is
:>unlawful to listen to anything that you are not licensed to transmit
:>except for amateur radio and broadcast), guns, and restrictions
:>on Internet communications (one must post one's true ID, MI5 must
:>have a copy of any encryption keys, and MI5 can read your email).
:>And the Bobbies do pull you over to check for illegal radios, guns
:>and whether you have ag diesel fuel in your tank.
:
:This, howver, is NOT he UK and there is no
:imminent or proposed radio restrictions of the type
:you suggest above.
:
:Cheers,
:Bill K2UNK

Bill you seem to be out of touch.

I just hit the delete key now anytime I see his call in the header information. He posts this crap every ten days in hopes of the uninformed clicking on his web site. Apparently he makes a buck every time someone makes the mistake. He just doesn't get it. There just aren't that many new subscribers to these news groups in any given month, and once you've seen his page, well, you've seen it. You don't want to book mark it, so he is essentially just preaching to the choir and taking up space and time in the process. If he would just once post a serious question on some topic, or answer someone's question with a studied answer I might take him seriously, but I just know that he is vulgar and shallow.

Another possibility is to come down the A-pillar outside the rubber molding to the door hinge / hood hinge area into the hood compartment. From here, try and find a rubber knockout that you can modify to pass the PL-259 connector through the firewall..
Note:
* The A-pillar is front door jam that vertically frames your windshield. Not all vehicles have sufficient room running down them.
* The area around the door/hood hinge can be tricky. Often an extra drip loop reduces pinching/binding at this point.
* If the rubber knockout is big enough, a hole drilled the coax size and two slits extending the a diameter should pass the connector. If not, cut and resolder a new connector.
* The antenna mount can be slid toward the rear of the car to take up the coax slack. Allow for creep over time.

KG7IL, Glenn in Renton, Washington.

But YOU don't get it! Old George is totally inept. Al MIGHT be inept, but George has a demonstrated history of it. As for what he says--well, he has at best average speech writers and his delivery stinks. Based upon his track record in Texas, George W. is a shallow thinking fabrication of the local political machine. Nothing more. Heck, even Pat Buchanan has more sense than George W., and Pat's an idiot.

You seem to be the only one having trouble understanding things. The point was that manufacturers of brand new, not type accepted, CB amplifiers are selling their goods on Ebay, and Ebay says they bear no responsibility for those sales. You don't have to inquire about when an amp was made when the ad says that they are being made to satisfy sales on Ebay as the sales are made. The sale of these amplifiers is illegal. Period.

OK. In that case having a blunt conductor, and some form of DC
leakage to earth, will reduce noise. But that isn't loop specific.

The original post was talking about power line noise.

The attached article (published by a major British newspaper) and its preamble are of the highest importance. They encapsulate in a few paragraphs the reasons I began my radio program in 1991 and why I continue my work today.

With all good wishes,

--

Kevin Alfred Strom.

News, links, and pictures: http://www.kevin-strom.com

An international alert: Say No to Extinction

* At the end of August, 2000, white people became a 49.8% minority of the population of California, USA. Back in 1970 eight out of ten Californians had been white. (See the accompanying article.)

* White people are currently about 60% of the population of London, UK, but on current demographic trends they will be a minority by 2010. (See the accompanying article.)

* On current trends the white, founding population of Australia will become a minority by about 2050. (Leading demographer Dr Charles Price predicted in People & Place, Vol 4 No 4, that Anglo-Celts would make up only 62.2% of the Australian population by 2025.)

* According to the US Census Bureau, whites will become a minority in the US between 2055 and 2060. (See the accompanying article.)

* By 2100 indigenous white people will be a minority in the UK. (see another Guardian report of September 3, 2000, at http://www.guardianunlimited.co.uk/Documentaries/)

According to the accompanying article, the population of Europe by 2050 will be just 7% of the total world population. By then, however, whites will be outnumbered in many parts of Europe.

Why does all this matter?

It matters because ethnic minorities in predominantly non-white nations are almost invariably dispossessed and seriously persecuted. Think of the poison gas attacks on Kurdish villages in Iraq. Think of the treatment of Indonesian minorities like the West Papuans and East Timorese. Think of the dispossession of white farming families in Zimbabwe. Or the genocide of Tibetans and Uighurs by the Chinese. Or the white women in Africa gang-raped

by blacks who apparently believe
this is a cure for AIDS (see, e.g., The Australian, 9 Feb 1990). If you do not do something NOW to stop this happening, you are condemning your own children and grand-children to be dispossessed, and putting them on the path to eventual extinction.

But what can one individual do?

The first step toward solving a problem is to acknowledge it. In this case, all white people around the world must be made aware that their entire race is facing extinction within a few generations. If you do not want this to happen you must alert everyone you know to the seriousness of this problem.

How much of my time would be needed?

At most, half an hour. Just half an hour out of your whole lifetime! Surely you can afford thirty minutes to help save your own children and grandchildren? Remember, extinction is FOREVER.

So what can I do?

Simply send this alert and the accompanying article to ten other people, plus one politician who represents you at any level of government. If the first ten people who receive this alert forward it to ten others (plus one politician), and if all the later recipients do the same, then within 20 days it will have been received by 10 BILLION addressees ï¿½ and by many, many white politicians.

How can I send it?

You can email it, post it, hand it to people, or letterbox it. There is no need to identify who you are, unless you wish to. Either way, JUST DO IT within 24 hours. Pass this alert on to ten others, plus one politician who represents YOU at any level of government.

Can I do more to help?

Of course you can. You could send this alert and the accompanying article to more than ten people and more than one politician. You could seek to have them republished in a journal or newsletter or some other publication to which you have access. If you have access to the Internet, you could post them in newsgroups. If you are a webmaster, you could create a site devoted to this subject ï¿½ and promote it!. If you are bilingual, you could translate this alert and the accompanying article into another European language, then send them to at least ten speakers of that language, and be sure to ask those ten to do likewise.

TO EVERYONE WHO RECEIVES THIS INTERNATIONAL ALERT:

PLEASE send copies of this alert and the accompanying article to at least ten other people (plus at least one politician) WITHIN 24 HOURS. Act now before it's too late!

The last days of a white world

We are near a global watershed - a time when white people will not be in the majority in the developed world, Britain included. The Guardian's Anthony Browne reports

Special report: Race in Britain

Sunday September 3, 2000

It was news and no news; the most significant milestone in one of the most profound changes to affect the US in the past century, and yet a non-event. Last week the US Census Bureau issued figures showing that non-hispanic whites made up 49.8 per cent of the population of California.

Anglo-Saxon whites are already a minority in Hawaii and the District of Columbia. Now they are an ethnic minority in the country's most populous state, the one most usually identified with the American dream.

As recently as 1970, eight out of 10 Californians were white. Fuelled by immigration at its highest rate since the start of the last century, and higher fertility rates, the Asian and Latino populations of California have risen by almost a third since 1990. At the same time, with limited immigration and low birth rates, the population of non-hispanic whites has fallen by 3 per cent. By 2040, hispanics are expected to be the overall majority in the state.

Where California goes, the rest of America is predicted to follow. At present 72 per cent of the US population is non-hispanic whites; the US Census Bureau predicts they will become a minority between 2055 and 2060.

The shifting sands of the US reflect wider - and highly controversial - changes elsewhere in the world. It is an area in which few demographers dare to tread for fear of being accused of racism. 'You cannot quote me - a word out of place and I get crapped on from a very great height,' said one academic. 'Whatever you say you are deemed racist'.

The past millennium was more than anything the era of the whites. Just 500 years ago, few had ventured outside their European homeland. Then, with several acts of genocide clearing the way, they settled in North America, South America, Australia, New Zealand and, to a lesser extent, southern Africa.

But now, around the world, whites are falling as a proportion of population. The United Nations collects and produces a vast array of statistics on population, but produces none relating to race or ethnic origin. Indeed few countries collect their own figures on ethnicity - in Europe, only the UK and the Netherlands do.

However, the UN's State of the World Population 1999 predicted that 98 per cent of the growth in the world's population by 2025 will occur in lesser developed regions, principally Africa and Asia. The most significant reason for this is lower birth rates in rich countries: in 61 countries, mainly the rich ones, people are no longer having enough babies to replace themselves.

In its World Population Profile 1998, the US Census Bureau predicted that by the second decade of this century all the net gain in world population will be in developing countries. 'The future of human population growth has been determined, and is being determined, in the world's poorer nations,' it said.

The global centre of gravity is changing. In 1900 Europe had a quarter of the world's population, and three times that of Africa; by 2050 Europe is predicted to have just 7 per cent of the world population, and a third that of Africa. The ageing and declining populations of predominantly white nations have prompted forecasts of - and calls for - more immigration from the young and growing populations of developing nations to make up the shortfall.

In Britain the number of ethnic minority citizens has risen from a few tens of thousands in the 1950s, to more than 3 million - or around 6 per cent of the total population. While the number of whites is virtually static, higher fertility and net immigration means the number from ethnic minorities is growing by 2 to 3 per cent a year.

One demographer, who didn't want to be named for fear of being called racist, said: 'It's a matter of pure arithmetic that, if nothing else happens, non-Europeans will become a majority and whites a minority in the UK. That would probably be the first time an indigenous population has voluntarily become a minority in its historic homeland.'

Lee Jasper, race relations adviser to the Mayor of London, Ken Livingstone, predicted a similar future, telling The Observer : 'Where America goes, Europe follows 30 years later. There is a potential for whites to become a minority in some European countries.'

In Britain, that is almost certain to happen in London, and in the relatively near future. 'At the moment ethnic minorities are about 40 per cent in London. The demographics show that white people in London will become a minority by 2010,' said Jasper. 'We could have a majority black Britain by the turn of the century.'

.. In the United Kingdom, the number of people from ethnic minorities has risen from a few tens of thousands in 1950 to more than 3 million now.

.. In Italy, the birth rate is so low that, without immigration, the population is predicted to decline by 16 million by 2050.

.. The United States government predicts that non-hispanic whites will become a minority in the country by 2055.

.. The United Nations predicts that 98 per cent of world population growth until 2025 will be in developing nations.

.. The population of Europe is expected to drop from 25 per cent of the world total in 1900 to 7 per cent in the next 50 years.

Look, guy, you can't tell the difference between a dedicated message containing an advertisement and a link at the bottom of a normal message? Nobody can be that dumb.

At least GW won't sell the Country to the Chinese. He won't destroy the
military. He won't march us into the hands of the UN's one world government.
Remember what the Communists said during the height of the cold war - that
they could never take us by force, but they would destroy us from within.
With the likes of Clinton/Gore, and the democrats' mindless liberalism, it
looks like the Commies are doing a pretty good job of it...

The obvious answer is to make us all one race sharing the same liberal, tolerant, Western culture. Quickly, now: go out and have sex with as many different people as you can until you have produced two children, and support increased funding for public schools.

That would be genocide -- multiple genocides, actually. And it would also constitute a terrible destruction of natural diversity.

Additionally, mixing will not mean one homogeneous mixed race -- far more likely is an India-like scenario, with a multiplicity of new types and subtypes, with all the associated hostilities and conflicts of a bi-racial society multiplied by ten. That's not a future I'd wish upon my posterity.

Furthermore, even wholesale mixing will not end the processes of racial divergence and speciation. It may set them back 100,000 years (and, in the process, extinguish forever the hope that Life will transcend the bonds of Earth), but they cannot be stopped.

Like storm-clouds building into thunderheads, race-formation is always on the horizon, always happening.

So the enforced multiracialism that now prevails in the former West is not only cruel, genocidal, and destructive -- but since it must fail in its goals, it is also pointless.

Honor bright,

--

Kevin Alfred Strom.

I'm glad the short-fuse person is concerned.

Even though the European race was once a far higher percentage of the Earth's population than it is today, it was never in the majority.

It's not being outnumbered _per se_ that is the threat. It's being outnumbered _in your own homelands_, having a population that is falling in absolute and relative terms, and not having a government answerable to your own people that bode ill.

Ask the Kurds.

I am puzzled about a couple of the many stories the loon has told about himself here in what has become his personal rant-group. He's stated that his father was a member of the KKK; and he has also stated that he is of half Amerindian ancestry. One does wonder if it's possible to reconcile these statements.

Lastly, to MWBRYANT@aol.com: Please stop sending me abusive and obscene emails; in fact, please stop sending me emails of any kind. I've already politely requested that you stop, yet you persist. I now repeat that request again.

As ever,

--

Kevin Alfred Strom.

So that is what it boils down to, I guess- Just how much IS your hobby worth? Case in point, met a guy at the local Denny's a few weeks ago. Had a new Lexus 400 with at least 3 different ham antennae on the trunk. Meanwhile, the local ham that lives around the corner won't put an antenna at all on his vehicle and prefers to use his HT with rubber duck despite driving an old beat-up Toyota Corolla (his argument is one of aesthetics instead of possible vehicle damage- he never has been able to see the beauty of a well functioning antenna and even refuses to put up an outdoor antenna on his house (EVEN TV!!)).
